# Muse Software Adds A New Dimension To Your Apple™ Computer

Software by Muse is designed to take your computer to the limit, so there's no limit to what it can do for you.

Think of all you could do with just these four Muse business programs.

## Super-Text™

You'll learn the basics of text editing in mere minutes, then turn your computer into a word processor with features so advanced it will continue growing with you year after year.

What kind of advanced features? 40 or 80 column display, page headers and footers, split screen for editing large documents, math mode for operating statistical reports, optional file linking for global search and print operations, preview mode for reviewing line endings and page breaks before printing, form letter generation and mailing list management add-on modules plus much more. **Only $175.00**

## Form Letter™

No matter how many form letters and documents you generate, each can carry an individual name and address, refer to your correspondent by name within the text, and include a special paragraph for that person alone. The program will also format and print an envelope at the end of the letter. An add-on module to Super Text. **Only $100.00**

## The Address Book™

No more dog-eared address files filled with scratch-outs and erasures. Our Address Book is an add-on module to Super Text that lets you add, or change addresses; list phone numbers; print labels, sort addresses; access state and your category codes. Or use the Address Book alone as a simple mailing list. **Only $44.95**

## Data-Plot™

Data Plot converts hard-to-understand figures into clear-at-a-glance graphics. And you can choose the format that works best: bar chart, line graph, scatter diagram or pie chart—all in color, of course **Only $59.95**

## For Business...

For Apple II™ or Apple II Plus™ with 48K.
Apple II is a trademark of Apple Computer Corp.

## Castle Wolfenstein™

# Your First Duty Is To Escape.

You are a prisoner in Castle Wolfenstein. A dying fellow prisoner has given you his long-hoarded revolver—and the information that somewhere here are the Nazi's secret war plans. You race through the rooms and hallways, avoiding—silencing—the guards on patrol, searching chests for the plans; finding extra ammo, grenades. The plans! Hurry, you're almost out! The guards are on your trail—you turn, fire—you're out. The plans are in the hands of the Allies! And you—a hero, naturally; promoted—but wait!

You are a prisoner in Castle Wolfenstein. And *this* time escape will be more difficult.

**Only $29.95**

## RobotWar™

# So... You Think You're Invincible?

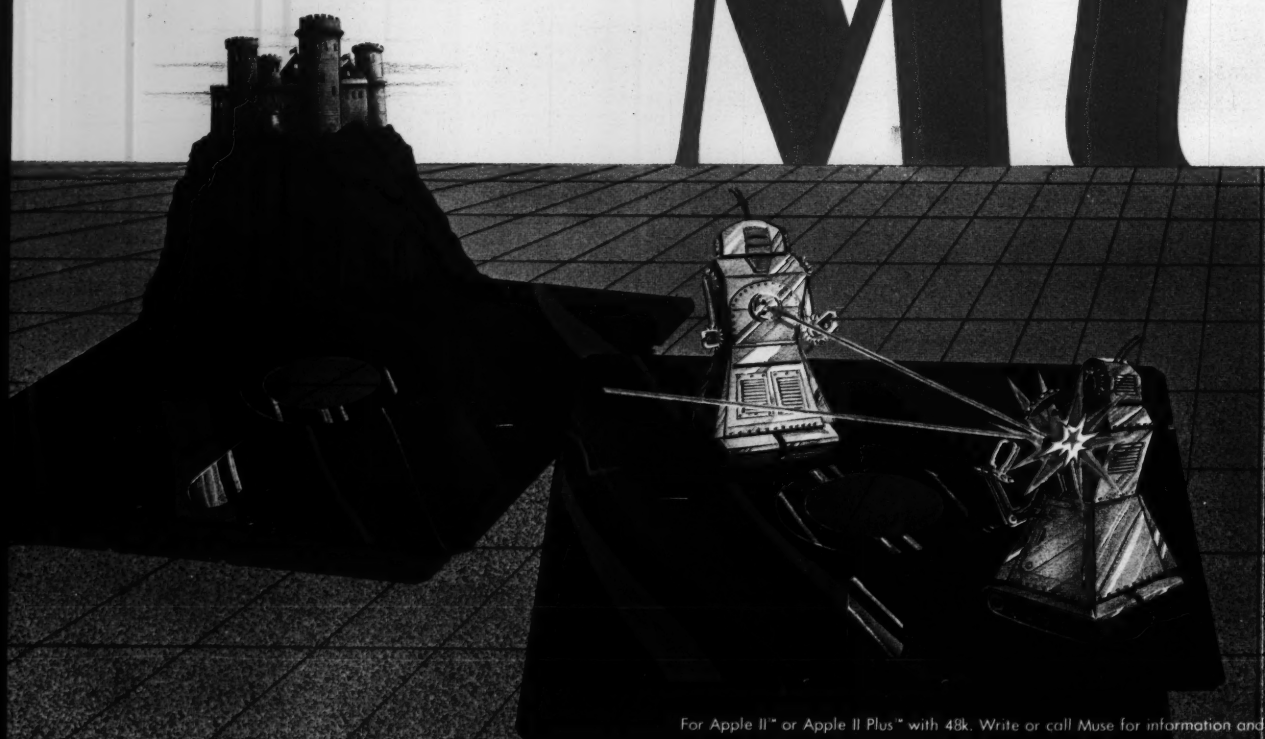
You've programmed your war robot. Tested it. De-bugged. Re-programmed. Tested... and you're *sure*. You have the *ultimate* robot. Are you ready to hurl your war-cry across the nation? There are hundreds of robot-lords awaiting your challenge.

**RobotWar**—an action logic game designed to sharpen your programming skills. Comes with five pre-programmed robot opponents. And, when you've developed a machine none of the five can destroy, there's a national network of people like you—each with an indestructible robot.

**Only $39.95**

# ... For Pleasure

MI



For Apple II™ or Apple II Plus™ with 48k. Write or call Muse for information and

# ABM-Anti Ballistic Missle™

## The Whole East Coast Is Being Bombarded And Only You Can Save It.

You're at the controls of ABM, the pulse-pounding anti-ballistic missile game from MUSE.

It takes a cool head, a hot hand and reflexes so lightning fast you can zap those babies right in their tracks. Pulverize 'em. Atomize 'em. Vaporize 'em.

Oh my God... those warheads... they're mirving. There are hundreds of them... thousands. They're everywhere. No one can save us now. Except you.

**Only $24.95**

Audiovideo licensed from Atari.

# The Voice™

## Pardon Me, But... Did Your Apple™ Just...Speak?

Muse gives your computer the power of speech with *The Voice*. Use the vocabulary provided to create thousands of phrases; or put your own words in the Apple's—ah—*mouth*.

Add sound effects to your own computer games. Greet visitors. Leave messages. Use your imagination. The possibilities are actually endless.

Each disk stores up to 80 words and phrases, which can be sorted for quick reference. And, *The Voice* allows your Apple to speak from *any* Basic Program through your Print Commands.

**Only $39.95**

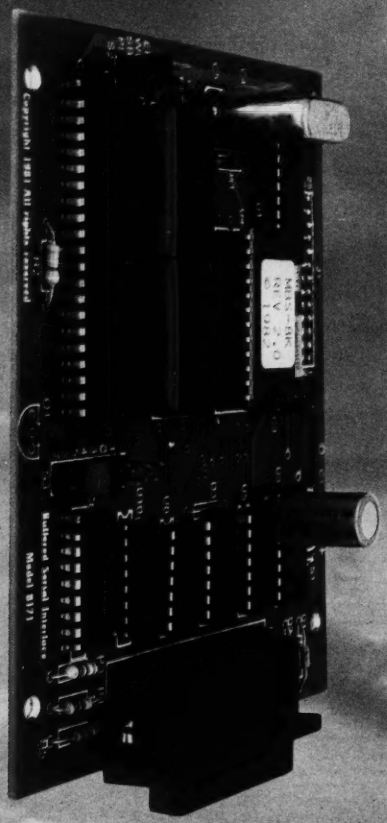
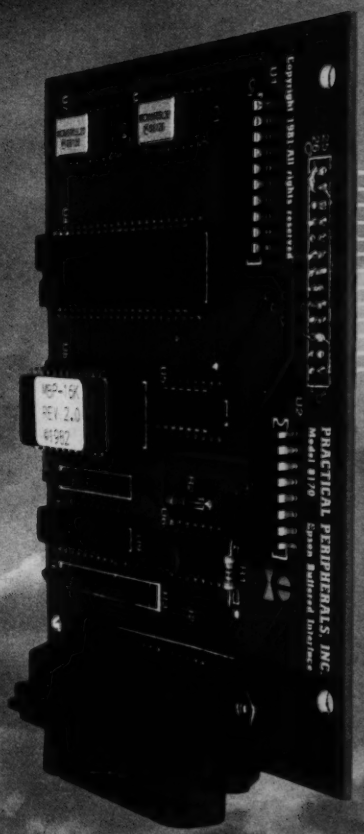
CIRCLE 22 ON READER SERVICE CARD

# HOW TO USE YOUR EPSON WITHOUT WASTING COMPUTER TIME:





Your computer is capable of sending data at thousands of characters per second but the Epson can only print 80 characters per second.

This means your computer is forced to wait for the printer to finish one line before it can send the next. A waste of valuable time.

## THE NEW MICROBUFFER™ ACCEPTS DATA AS FAST AS YOUR COMPUTER CAN SEND IT.

Microbuffer stores the data in its own memory buffer and then takes control of the printer. This frees your computer for more productive functions.

## PARALLEL OR SERIAL.

Microbuffer model MBP-16K is a Centronics-compatible parallel interface with 16,384 bytes of on-board RAM for data buffering.

The MBS-8K is a full-featured RS-232C serial interface with both hardware and software (X-On/X-Off) handshaking, baud rates from 300 to 19,000 and an 8,192 byte RAM buffer.

## SIMPLY PLUG IT IN.

Either model fits the existing auxiliary interface connector inside the Epson MX-80, MX-80 F/T or MX-100 without modification, and is compatible with standard Epson cables and printer control software, including GRAFTRAX-80.

## JUST $159.00*

When you think how much time Microbuffer will save, can you afford *not* to have one? Call us for your nearest dealer.

# TRISSTICK™

Model 1 AND Model 3 owners may now purchase the new, exciting, and versatile "TRISSTICK™". The TRISSTICK™ is compatible with all of our games and comes packaged with complete instructions for use with your own programs. It features the famous Atari joystick with a molded plastic interface module that simply "plugs in" to your computer: no modification or wiring is required.

# INTRODUCING PERFECT WRITER™. NOW, GET THE FINEST WORD PROCESSOR AT ANY PRICE FOR JUST $289.00

## AND GET OUR INCREDIBLE, MONEY-BACK GUARANTEE!

That's right. If you own an Apple II, Heath/Zenith, TRS-80 model II, North Star, Osborne 1, Superbrain, Micropolis/Vector, or CP/M 8," you can now afford the most advanced, yet easy-to-use, word processor on the market today.

But don't take our word for it. See for yourself.

We're so sure you'll be amazed by Perfect Writer's easy-to-use features and capabilities, that we'll let you try it for thirty days and give you your money back if you're not completely satisfied!

## FEATURES AND FLEXIBILITY YOU HAVE TO SEE TO BELIEVE.

Looking for the advanced features you'd expect to find in the most expensive word processors? Perfect Writer has them. Like automatic formatting of letters, out-lines, reports, memoranda, articles, books, or other types of documents.

What makes Perfect Writer unique, are the features you won't find in word processors costing many times its price.

Like the incredible sophistication of Virtual Memory Architecture, that lets you edit a full-length novel as easily as you'd edit a letter.

Or a remarkable breakthrough called Split Screen Editing™ that lets you divide the screen into two parts, each showing a different document, and transfer sections of text between the two!

Perfect Writer.
The remarkable word processor combining sophistication and simplicity.

And that's just the beginning. Perfect Writer offers much, much more:

- Automatic numbering of pages, chapters, sections, footnotes, internal page references, and automatic generation of table of contents and indexes.
- Mail merging capability allows generation of form letters and more.
- Automatic carriage return, auto-centering, tab setting, and automatic placement of footnotes.
- Quick and easy cursor commands.
- Easy deleting and inserting procedures.
- Safe and convenient storage of materials.
- Searches for and replaces words and phrases in a document, including near misses.
- Full range of printing options, including right margin justification, micro-spacing, super and subscripts, italics, and bold face.
- And lots more.

## MONEY BACK GUARANTEE.

Try Perfect Writer for 30 days at our risk. If you're not completely satisfied, return it for a prompt, complete refund.

## PERFECT WRITER IS EASY TO USE. WE GUARANTEE IT.

When we say that Perfect Writer is easy to use, we mean it. That's why we're not afraid to offer a money back guarantee.

You see, Perfect Writer was designed to be simple. In fact, you don't even have to read our crystal-clear manual in order to use Perfect Writer. The pictures, diagrams and illustrations tell you all you need to know, so you're off and running in no time.

There are no difficult and awkward procedures and commands to learn. We guarantee it.

## ORDER NOW. WHAT HAVE YOU GOT TO LOSE?

If you'd like to own the most sophisticated word processor on the market today at the current, introductory price of just $289.00, we invite you to order now.

Perfect Writer is completely guaranteed, so there's no risk of any kind. Why not see for yourself what this incredible new software breakthrough can do for you?

## Video Artists

Attention video artists and film producers.

If you have been reading *Creative Computing* lately you know that we are most enthusiastic about optical laser scan videodiscs. We are fascinated about the possibilities when these discs are used interactively with computers. In the January issue, for example, we described a game which uses visual sequences from a videodisc. The cost of mastering and producing such disks is coming down dramatically. Hence, we are looking to produce a videodisc for several different uses.

1. **Visual adventure games.** The adventure game we wrote using the commercially available disc of *Rollercoaster* was agonizingly slow because of the time needed to search for visual sequences, some of which might have been at the beginning of the disk and some at the end. If the sequences are close to each other, the search can be performed very quickly. Hence, what I am looking for are 10-20 second action sequences over a wide variety of subject areas. For example, getting on a bus, an airplane landing, people walking down the street, opening a door, a ride at an amusement park, eating a hamburger, lighting a cigarette, hammering a nail, opening a cupboard, pouring a cup of coffee, diving in a pool, digging on a beach, etc. What I am seeking is hundreds (maybe thousands) of everyday and not-so-everyday scenes which can be put on a videodisc and worked into a wide variety of adventure games. The material cannot be copyrighted or covered by Screen Actor Guild contracts since it will be used in highly interactive and, perhaps unexpected ways. Since this will occupy only a small fraction of the disk, I am also looking for:

2. **Computer and video graphics.** At Siggraph, NCC, and other computer conferences frequently one or more computer graphic artists shows a short film or videotape of his work. Some of these are incredibly spectacular. However, I have rarely seen one long enough to be released on its own since there is really no appropriate format to distribute extremely short subjects. However, now we have the appropriate vehicle. Imagine, if you will, 20 or 30 exciting, dynamic video graphic sequences which can be viewed individually or as a group. We would incorporate music with this to make it an exciting visual and aural experience.

For previewing the material, we would prefer that it be submitted on one of the two home videotape formats, Beta (II or III) or VHS. All tapes will be returned. The final videodisc will be produced using professional equipment, however, we'd like to rough it out with home (read, low-cost) equipment.

Please address your submissions to Videodisc Project, Creative Computing, 39 East Hanover Ave., Morris Plains, NJ 07950.

## Down Under

Have you ever thought about going down under?

Here's a golden opportunity. The Ninth Australian Computer Conference together with a Schools Symposium is being held in Hobart, Tasmania, Australia from August 23-28 1982. Tasmania is an island state in the southernmost part of Australia and, despite the unsavory reputation of the not very pleasant Tasmanian Devil, the residents feel that it is the best and most hospitable part of Australia.

The theme of the conference is "Native Technology." The intention is to focus on the possibilities that exist for encouraging indigenous technology in countries like Australia and solving their related problems. The scope of the conference is broad, having such diverse streams as auditing, computer crime, computers in medicine, robotics and industrial use, databases, computers in government, networks and communication, and the software industry. The concurrent Schools Symposium will bring together both international and Australian lectures in presentations and small discussion groups with students and teachers.

Tasmania is one of the most advanced states in Australia in developing computer education in schools, and can be classed with world leaders in this respect. Its statewide network has brought computing to remote rural areas and participation by students and their teachers, along with people from other parts of Australia and overseas, is sure to make this symposium a lively event.

Keynote speakers include Dr. Seymour Papert from the LOGO project at MIT; Professor Tom Stonier from the University of Bradford and author of *A Wealth of Information*; Ted Codd of IBM Advanced Research in San Jose, known internationally for his work which led to the concept of relational databases; and yours truly, who will be talking about videodiscs, computers in education, and several other topics.

The social events in conjunction with the conference sound quite spectacular. A full day excursion will visit Eaglehawk Neck and Doo Town, Devil's Kitchen and the Blowhole. It includes a guided tour of a ruined prison, a visit to a 19th century steam operated timber mill and a cray-bake and barbecue. There are bush ventures which are four-wheel drive tours designed to show the southwest sections of Tasmania not usually seen by tourists. Each four-wheel drive vehicle will have six or fewer passengers and the itinerary will be set in accordance with the interests of those on board. Thursday boasts a "bush ranger night" with an ox roast on the village green followed by a country dance in the village hall in Richmond. There are also several other cruises, dances, and other social events.

For more information, write Ninth Australian Computer Conference, P.O. Box 216, Sandy Bay 7005, Tasmania, Australia.—DHA

## Siggraph Correction

Ikonas Graphics Systems has notified us of a correction for our "Smoothers of the Lost Arc" report on Siggraph '81 (March 1982).

The Mountain Scene, Photo 2 on page 104, was computed by Loren Carpenter while he was with the Boeing Company. The mountain images were first shown at Siggraph '80 in Seattle.

## Siggraph '82

The Ninth Annual Conference on Computer Graphics and Interactive Techniques will be held in Hynes Auditorium, Boston, MA on July 26-30, 1982.

This computer graphics conference is sponsored by the Association for Computing Machinery Special Interest Group on Computer Graphics (ACM SIGGRAPH).

The conference program will feature display exhibits, courses, technical sessions, vendor forums, a multi-media computer graphics art show, and computer-generated films.

For further information, contact: Conventures, Inc., 45 Newbury St., Boston, MA 02116. (617)267-3456.

# The IBM Personal Computer

## Personal, Professional, Technical — or somewhere in between ... PC-MATE™ makes the IBM Personal Computer a perfect match

PC-MATE™ from TECMAR is the first and only complete expansion series available for the IBM Personal Computer. There are currently more than twenty PC-MATE™ expansion options available, and new products are continuously added to the list.

When you want more from your IBM Personal Computer, look to PC-MATE™.

You can create a SUPER PERSONAL COMPUTER with household lights and appliance control, voice output, and give it more memory than any ordinary personal can handle.

Or make it a PROFITABLE PROFESSIONAL SYSTEM with expansion space and a Winchester disk to handle more business accounts. Increase memory up to the system limit and process those accounts faster. Add flexible I/O interfaces and put yourself on line to outside information sources.

As an INTELLIGENT LABORATORY TOOL with interfaces to IEEE 488 instrumentation, analog signals, stepper motors and video signals, your IBM Personal Computer becomes the perfect workbench assistant.

Hardware, Software, Accessories — PC-MATE™ provides the highest quality and the greatest possible range of functionality for the IBM user.

Ask your local computer store for more information on the PC-MATE™ series from TECMAR, or call for the name of your nearest authorized PC-MATE™ dealer.

PC-MATE™ EXPANSION OPTIONS

Personal Computer Expansion Chassis (see photo)
192K and 256K Dynamic Memory with Parity
Winchester Disk Drive and Controller
Parallel Medium Speed Input/Output Interface
Serial Medium Speed Input/Output Interface
Parallel High Speed Input/Output Interface
Serial High Speed Input/Output Interface
Analog to Digital Converter - 8, 12, 14, 16 Bit
Dust Cover Set for IBM PC and Peripherals
High Speed Static Memory (RAM/ROM)
Digital to Analog Converter - 8 and 12 Bit
Multi-System Printer Sharing Facility
CMOS Memory with Battery Backup
System Clock with Battery Backup
Electrically Erasable EPROM
BSR X-10 Device Controller
Stepping Motor Controller
Video Image Digitizer
IEEE 488 Interface
Prototyping Board
Music Synthesizer
Voice Synthesizer
Extender Board

One Year Warranty

Additional products are already under development, so if we don't have what you need, chances are good that we soon will.

# Wizard-BPO™

## BUFFERED PRINTER OUTPUT

Allows new-task input while old-task prints out.

**STOP WAITING FOR SLOW PRINTER OPERATION**

WIZARD-BPO is a parallel printer interface that lets you use your Apple while data from a previous operation is being printed. No more wasting of your precious time while your printer prints. The WIZARD-BPO contains a 16K byte "character buffer" that may be expanded to 32K bytes of character buffering. It accepts data at the Apple's rapid transfer rate, stores the data and feeds it to your printer at the rate the printer can accept it.

- Fully compatible with all Apple II and Apple II Plus* computers
- Fully compatible with most Apple II expansion boards
- Fully compatible with most Apple software including Applesoft BASIC*, Integer BASIC*, CP/M, Pascal, etc
- Low power consumption for cool reliable operation
- Leads soldered directly into board for reliable operation
- Many formatting features
- Two-year factory replacement Warranty

Backed by the world's #1 independent manufacturer of peripheral controllers

Available at all fine Computer Stores $179.00

## Who's Afraid?

Dear Editor:

The article by Keith Brewster, "Who's Afraid of the Big, Bad Matrix?" (December 1981) deals with a topic difficult for the neophyte to understand. Brewster's concept of an array (and a matrix) as a collection of numbered boxes is a useful one for helping the beginner understand arrays.

For the most part the article is good, but I take exception to his definitions of the terms array and matrix. These are incorrect and would lead to confusion as the neophyte graduates to a learner who wishes to read other sources. The other sources would not use Brewster's definitions.

Technically, an array is an indexed collection of variables. Thus, the term array is general and applies not only to the one-dimensional case, but to the two-, three-, ..., and n-dimensional array as a "list" and a two-dimensional array as a "table." These two terms give him a visual image of these two types of arrays. A one-dimensional array is a numbered list of variables, e.g., A (1), A (2), ..., A (15). A two-dimensional array is a numbered (i.e., indexed) table of variables:

| | | |
|---|---|---|
| A(1,1) | A(1,2) | A(1,3) |
| A(2,1) | A(2,2) | A(2,3) |

A table has rows and columns.

Where does the term matrix fit in this? A matrix is another name for a two-dimensional array. It is *not* two-, three-, ..., n-dimensional as Brewster states. Thus, matrix and table are synonymous and a matrix has rows and columns. To be absolutely correct, a matrix is two-dimensional having rows and columns, but it may have only one row or only one column. This means that we may properly call a one-dimensional array a matrix. (Tables can have only one row or one column, can't they?)

What would I tell the beginner about arrays? An array is a set of variables, all with the same name, which are numbered, or indexed, so we can identify each. A list is one type of array, a list of variables. A matrix is another type of array, a table of variables.

We can think of each as a set of boxes in which the boxes are identified by a number or a pair of numbers (to indicate the row and column in a matrix). We can store either numbers or strings in these boxes, depending on the type of variable name we choose, either numeric (A) or string (A$).

I find that this explanation works well with my students in Basic programming classes.

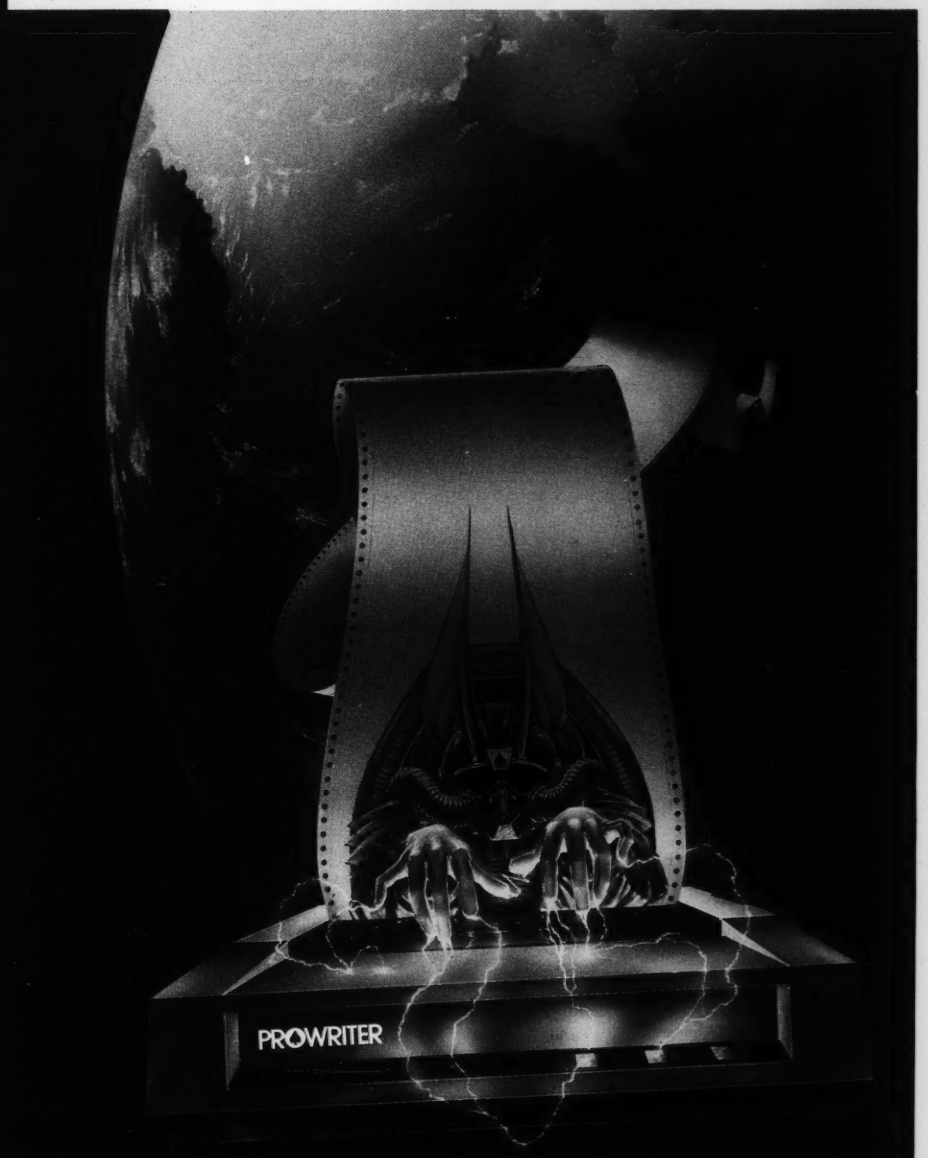
# THE PROWRITER COMETH.

*(And It Cometh On Like Gangbusters.)*



Evolution.

It's inevitable. An eternal verity.

Just when you think you've got it knocked, and you're resting on your laurels, somebody comes along and makes a dinosaur out of you.

Witness what happened to the Centronics printer when the Epson MX-80 came along in 1981.

And now, witness what's happening to the MX-80 as the ProWriter cometh to be the foremost printer of the decade.

**SPEED**
MX-80: 80 cps, for 46 full lines per minute throughput.
PROWRITER: 120 cps, for 63 full lines per minute throughput.

**GRAPHICS**
MX-80: Block graphics standard, fine for things like bar graphs.
PROWRITER: High-resolution graphics features, fine for bar graphs, smooth curves, thin lines, intricate details, etc.

**PRINTING**
MX-80: Dot matrix business quality.
PROWRITER: Dot matrix correspondence quality, with incremental printing capability standard.

**FEED**
MX-80: Tractor feed standard; optional friction-feed kit for about $75 extra.
PROWRITER: Both tractor and friction feed standard.

**INTERFACE**
MX-80: Parallel interface standard; optional serial interface for about $75 extra.
PROWRITER: Parallel and serial interface standard.

**PRICE**
Heh, heh.

# We don't make a Winchester for just anybody.

We're Corona Data Systems and we've made Starfire, a Winchester disk just for Apple II*.

**What's in it for you?**

5 million characters of storage. And that's not all. You'll get Corona's Disk Partitioning which allows for up to 16 separate operating systems such as Apple DOS, CP/M* and Pascal, all sharing the same disk. Of course, you'll still be able to use DB Master* and protected software like VisiCalc*.

**Double Size Volumes.**

And with our Double Size Volumes, your Apple DOS is transformed into something special that offers larger data files. And you'll never have to type commands like "catalog" and "run" or type program names again. You can even forget what volumes the programs are in.

**Reliability.**

But you'll never forget Starfire's reliability. That's because we built DataGuard,* the feature that will correct errors, not just report them. And we also provide a one-year warranty that you can count on. That's reliability.

So why take chances? With Starfire, you're not just adding a hard disk to an Apple II, but transforming an Apple II into a full hard disk business computer.

# The Little Computer That Could

Glenn A. Hart

The computer business is very much a land of opportunity. Major advances in technology arrive with startling rapidity. Combined with tremendous demand in both the consumer and business sectors, the result is an alluring siren that draws a large number of new ventures.

There are so many such companies that there is even a jargon word for them: "start-ups." There is just the slightest touch of skepticism implied in the phrase; many, if not most, such operations announce exciting new products but ultimately can't deliver any at all or quickly fail through under-capitalization, design problems or simple mismanagement.

When Adam Osborne, a transplanted Englishman known primarily as a writer and industry pundit, announced his own start-up hardware firm to produce a full-featured portable CP/M computer with an impressive array of software at an unbelievable retail price, it is an understatement to say that there were a few doubters.

As we'll see, Osborne has delivered everything he promised and then some. The result is an excellent and different computer, an impressively well-run company with unique policies and fine prospects for the future.

The Osborne I doesn't offer any real revolutionary breakthroughs. It is much more an evolution and refinement of existing techniques used elsewhere, packaged in a very new way.

Glenn A. Hart, 51 Church Road, Monsey, NY 10901.

It employs a standard Z-80 microprocessor, 64K of dynamic RAM, various I/O for peripherals, a video monitor, and two 5 1/4" floppy disk drives. These specifications could easily describe many microcomputers, although in each area there are little wrinkles of sophistication which we will examine shortly.

***The 5" monitor is clearly the most controversial aspect of the machine.***

The remarkable thing is that all this is completely portable! A very sturdy molded plastic case that is a dead ringer for a portable sewing machine houses everything mentioned above. When the case is sealed it is weather resistant and sized to fit under an airline seat. Releasing two latches opens the case, allowing the main unit to sit on the edge of the keyboard to form a compact and neat work station.

The full-sized keyboard has a more or less standard layout with a numeric keypad and a few extra keys for cursor movement and other special functions. Feel is quite good, better than many microcomputers, although not quite up to some expensive stand alone terminals.

The Osborne uses what they refer to as three banks of memory, although these are not the normal banks used in some S-100 systems. The first bank is the normal 64K of dynamic RAM. The top 4K is used for memory-mapped video display, leaving 60K for the CP/M BIOS and BDOS/CCP. Memory mapping provides very fast screen update and allows direct manipulation of screen characters with some sacrifice of memory space.

The second bank holds 4K of ROM which takes control when the system is first turned on. The ROM contains disk booting routines, diagnostics, and I/O, video, disk, keyboard and port drivers. The code in the ROM is something of an extension to CP/M; some of the code which would normally be in the CP/M software is stored in ROM instead.

Also in bank 2 is the memory-mapped I/O area. Almost all normal CP/M systems use what is called port-mapped I/O, meaning that information is passed to and from devices through one of the 256 input/output ports supported by an 8080 or Z-80. The Osborne uses chips from the 6800 family (specifically a 6850 and a 6821) which require that data be written to memory locations instead of to I/O ports. This may seem rather strange to CP/M types, but S-50 users will feel right at home.

The balance of the second memory bank mirrors or shadows the base bank and therefore isn't available for any constructive use. The third bank is unused except for the top 4K. One bit of each byte in this area is used as a video attribute to control underlining of each character.

**Video Display**

Video is displayed on the 5" monitor, which is clearly the most controversial aspect of the machine. Unlike most serious

monitors, which usually display 24 lines of 80 characters each, the Osborne screen shows 24 lines of only 52 characters each. This is thirty-five percent fewer characters than you would find on a standard screen, but over 20% more than the 16 x 64 screens still used on some computers and much more than an Apple II and other small computers which use TV sets as their display media.

The characters are very sharp and well defined, with full upper and lower case with descenders. The only deviation from a normal font is the lower case m, which is a smaller version of an uppercase letter to avoid blurring.

The Osborne I actually maintains a much larger 32 line by 128 character video area in internal memory; the hardware permits scrolling around in this area with the cursor movement keys in some modes of operation.

Full underlining and half intensity are available, as are 32 block graphics characters useful in forms design. A connector on the computer can drive an external video monitor of any size, which certainly eliminates the small screen size problem but also destroys the portability advantages which are the Osborne's main claim to fame. The external monitor displays exactly the same 24 by 52 format of the built-in screen.

The two built-in disk drives are another source of dispute. While they work perfectly and are quiet and reliable, disk capacity is limited to only 102 kilobytes each, and of this only 92K is available for program and/or data storage under CP/M. This is sufficient for a surprising amount of serious work, but many CP/M applications require far more storage capacity.

**Interfacing**

The Osborne I really shines in interfacing provisions. A standard RS-232 serial port is provided which can run at 300 or 1200 baud (600 or 2400 with an internal jumper change). The supplied software implements several handshaking protocols if necessary, including ETX/ACK, XON/XOFF, etc. This port is fully bi-directional and can also be used to interface an external console, transfer programs and data to an external computer, etc.

A separate modem port, which uses a nine-pin connector, is provided. Osborne will be releasing a custom modem designed to use this port, but it is not difficult to configure a normal acoustic or direct connect modem to match the Osborne I.

A full IEEE 488 port is also included, which is most unusual indeed. This port can be configured to provide the standard Centronics parallel printer protocol as well, so almost any type of printer can be accommodated. There is a wide variety of devices which have been interfaced to the IEEE bus, including hard disks, modems, printers and laboratory equipment, so the ability of the Osborne to interface with the outside world is essentially unlimited.

The final connector is for a forthcoming battery pack which will allow the computer to operate up to two hours without any access to AC power. A car adapter will also be included to run the unit from an auto battery.

***The combined hardware/software of the Osborne I is a bargain.***

**Software**

The Osborne I is, indeed, supplied with the wealth of software claimed. It is hard to believe that such a comprehensive assortment can be provided at the price of the total package; the combined list prices of the software are reasonably close to the Osborne's retail price of $1795. It is almost like getting the computer free! Of course the software included is available at significant discounts, but the combined hardware/software of the Osborne I is, nevertheless, a bargain.

The computer is supplied with a complete implementation of CP/M version 2. All the standard utilities are provided, including ASM, ED, MOVCPM, PIP, STAT, FORMAT, etc. Unfortunately, Osborne does not include a listing of the BIOS, so user modifications and patches are difficult or impossible.

Osborne has announced a technical manual which will include the BIOS listing. As partial compensation, an excellent setup utility is provided which automatically configures the BIOS for the type of printer drivers desired, baud rates and other parameters. The program allows assigning strings to the number keys 0 through 9 such that a control-1, for example, will output whatever string the user has pre-programmed for that key. Thus the Osborne computer has an even more flexible function key design than terminals with actual function keys.

The FORMAT program also serves as a full disk fast copy utility, and features a very good screen display to let the user know what is happening as formatting or copying proceeds.

When the CP/M disk is booted, an excellent help menu appears rather than CP/M itself (see Figure 1). Selecting a letter displays a screen of explanatory text describing a machine feature or giving instructions on the purpose and operation of software. This is a great help to first time users.

The commercial programs are the Microsoft Basic interpreter, the CBasic pseudo-compiler, Sorcim's excellent Supercalc spread sheet program and WordStar with MailMerge for word processing.

The Basics are the current versions and are not customized for the Osborne in any way.

Supercalc has been partially configured for the Osborne; some messages don't fit the screen window.

The WordStar provided is version 2.26 rather than the new 3.0. This is due to a conflict in the horizontal scrolling provision of WordStar 3.0 with the routines built in to the Osborne's hardware. Since the only

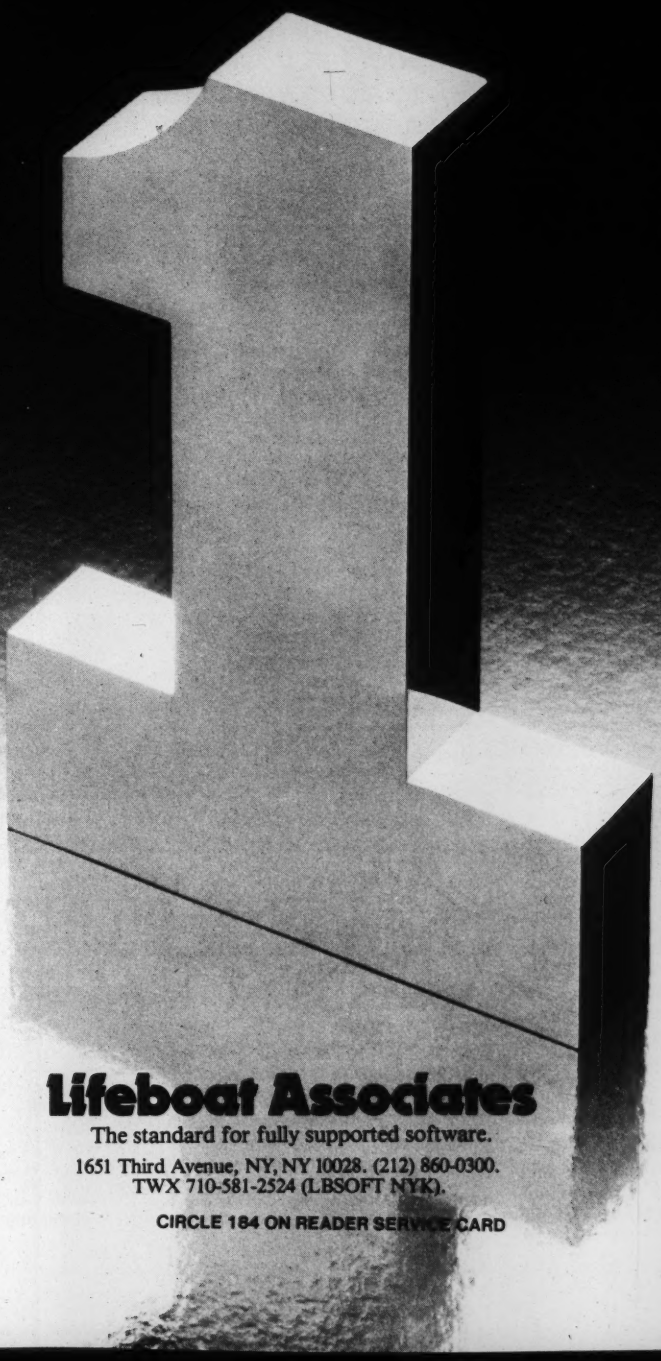
We are dedicated to the achievement of a singular goal...
to market fully supported software that sets standards of excellence.

Standards against which all software will be measured.
Standards which require that we, as well as the OEM's and authors with whom we labor, constantly offer the state-of-the-art.

Our commitment to being Number One is too strong for Lifeboat to market anything less.



**Lifeboat Associates**

The standard for fully supported software.

1651 Third Avenue, NY, NY 10028. (212) 860-0300.
TWX 710-581-2524 (LBSOFT NYK).

CIRCLE 184 ON READER SERVICE CARD

other important new feature in 3.0 is block operations on column groups rather than lines of text, the 3.0 may be provided in the future after some software modifications.

All the software is first rate and works perfectly on the Osborne. With the limited storage capacity of the floppy disks, WordStar consumes most of a disk and some of the other packages eat up a lot of disk space as well. All this means is that the program disks almost always use the left drive while user files and applications use the right one. There is ample room for many applications, although WordStar users must be quite careful in monitoring the size of their files.

**Company Policies**

Any new computer almost certainly has some design problems and bugs. The Osborne was no exception, although most of the problems were relatively minor. What is exceptional is the approach Osborne took in the past and continues to take to solve problems and improve the performance of their system.

When the normal difficulties arose with early units, Osborne made arrangements to make *free* upgrades to the keyboard, ROMs and software. Users merely had to bring their units to a dealer for no charge replacement and upgrade.

This is quite unusual, with most companies offering improvements at perhaps a lower cost than normal, but almost always charging for such major upgrades. Similarly, documentation upgrades are being provided at no charge to all registered owners.

Speaking of documentation, the Osborne I deserves special commendation in this area. The computer is supplied with very comprehensive explanations of its internal hardware and software design, including all the pinouts for the interface connectors and complete software examples on how to access video and I/O memory addresses, how to drive the interfaces and many other useful and informative tidbits of information.

Complete documentation for all the applications software is also provided; in some cases this closely mirrors that provided by the software authors, while some of the manuals have been rewritten by Osborne.

While the original documentation was very good, Osborne wasn't completely satisfied. They hired one of the best microcomputer writers around, Thom Hogan, to rewrite everything. The new version is even better and more informative, and maintains a nicely conversational tone even while discussing highly technical subjects. Both tutorial and reference sections are provided, for a total of more than over 500 pages.

Osborne's marketing philosophy aims the Model I at business executives and other non-technical types. This explains their omission of the BIOS code in the documentation provided to all users; they prefer to produce relatively "turn-key" systems which can be field configured by users or, at worst, by their dealers.

Osborne is making arrangements with various software houses for Osborne itself to market many desirable software packages directly, allowing the company to maintain full control over the hardware/software interface. While outside vendors have already begun to market software for the Osborne I, few hardware companies have made peripherals available as yet.

***Osborne's marketing philosophy aims the Model I at business executives and other non-technical types.***

Osborne will be addressing some of the shortcomings of the machine in the near future. A double density upgrade is due for release around the time you read this article. This modification will permit 200K to be stored on each drive at a cost of around $200 for the dealer installed retrofit. There are many 5 1/4" drives which store much more than this, usually through a combination of higher track density and/or double sided drives, but Osborne states that such mechanisms do not yet meet their standards of reliability, especially with the jostling a portable unit receives.

*"We have a computerized toilet, and it's really nice—unless you have to go and the computer is down!..."*

Work is also proceeding on a 24 by 80 video presentation. This upgrade will involve a complete swap of the single board computer and will also include the double density option and expanded communication capabilities at a cost of approximately $600.

Other new products include the battery pack/car adapter mentioned earlier and a full-function 300-baud modem which will fit in the disk storage compartment and require some internal modifications. Cost for the battery pack will be about $225, including communication software.

**Evaluation**

I have a bit of a confession to make. When *Creative Computing* called to ask me to review the Osborne I, I was rather reluctant to do so. My personal system lists for about $30,000 and includes large capacity hard disk, three printers, plotting, many sophisticated special purpose boards and many other goodies.

I fully expected to feel constrained by the limitations of the portable unit. I had heard of the difficulties some users had with the small screen size and limited disk capacity and, all in all, I wasn't sure I could provide an objective evaluation of the unit.

Well, my actual reaction is just about completely the opposite. The little Osborne I has won me over almost completely. Besides being immensely "cute" and a real startler to those who see it for the first time, the unit has worked flawlessly and done everything it claims to do.

I have lugged it around to friends' houses, taken it on weekend trips and, more important, carried it back and forth to work. It worked perfectly the first time in driving several different printers with differing interface and protocol requirements, allowing me to use it for word processing and spread sheet forecasting.

I am certainly not blind to its limitations, but I have been able to perform a tremendous amount of useful work on the Osborne I which would otherwise have been difficult or impossible under certain circumstances. It is a very useful extension of my big system, and will be even more so when some of the new upgrades and peripherals become available.

In many respects, I think the Osborne I is a far more capable computer than many of the small micros widely used today, even without color graphics and the other bells and whistles available on some other units.

As either the primary computer for business executives or as a second computer for CP/M users, the Osborne I is a fine choice. The only problem I have now is that *Creative* thinks I'm giving the Osborne I back to them. No way! They'll have to come and drag it away from me! □

Alien ambush™
ALONE IN AN UNCHARTED GALAXY, YOU'RE SUDDENLY AMBUSHED BY AN ALIEN MARAUDER. INSTINCTIVELY, YOU FIRE YOUR LASERS. HITTING THE ATTACKER, YOU WATCH IN HORROR AS IT SPLITS INTO TWO MENACING CRAFT. YOU GROW DESPERATE AS MORE ALIENS CAREEN TOWARDS YOU...
by Peter Fokos

# You haven't lived until you've died in space.

And here's your chance.

Software author Peter Fokos has created Alien Ambush, a space age nightmare. This hi-res, full-color arcade game is written completely in assembly language to give those nasty aliens every advantage.

So if you have access to a 48K Apple* with DOS 3.3, and you're hot for some new thrills, Alien Ambush was written for you. But be warned: It just got a lot tougher to survive in space.

# NOW THAT YOU'
# FIRST GEN
# TAKE A LOOK

Welcome to a tour of the biggest Apple.

The Apple® III Personal Computer—the most powerful machine in its class.

Because it's the only personal computer that lets you add up to 256K RAM, hang on a full complement of peripherals, and still have four expansion slots left for future growth. (Unlike some micros which become woefully "slot-bound" when upgraded to maximum memory.)

Because it's the only machine now using 64K RAM chips to keep 256K tidy on a single board.

And because it's the only machine that gives you the help of SOS.

## THE MOST SOPHISTICATED OS.

SOS is the Apple III's Sophisticated Operating System, an elegant software interface that frees you from most system control tasks. It features a hierarchical file system, device- and user-level interrupt capabilities, a device-independent file system and memory management capability.

Since all Apple III languages use SOS, they share a common disk format. So Apple III programs can merge and communicate—a Pascal application program can directly access a BASIC text file, for example.

*"Fully configured" means system includes, at minimum, monitor, printer, 2-disk drives and RS-232 communicator. NOTE: Chart based on manufacturer's information available as of December, 1981.

# VE SEEN THEIR ERATION AT OUR THIRD.

SOS allocates system resources to make the most of dynamic memory, simplifies programming with standard device and file interfaces for all languages, and speeds software development by reducing program size and complexity.

OUR NEW PROFILE.

ProFile™ is Apple's new personal mass storage system—a quick, quiet 5MB hard disk ideal for software development or any mass storage application. Shown above twixt monitor and console, it comes with everything you need to get up and running, including interface card and driver software.

The III's standard built-in drive is a 140-K floppy that can be daisy-chained with three additional drives through a back panel connector. Which leaves you plenty of expansion slots for things like our new Universal Parallel Interface Card or our OEM Prototyping Card.

CHANGE KEYS.

The 128-character ASCII-encoded keyboard happens to be fully-programmable. So you can (with SOS) do neat things like remap it into DVORAK. Or create armies of special function keys. Or teach your Apple to display Chinese.

Its own languages already include Business BASIC, UCSD Pascal,™ Assembly and, soon, a powerful new COBOL—and, in emulation mode, most languages available for Apple II.

Look up from the keyboard and you'll see our standard Monitor III green phosphor display (80 char. x 24 lines, u/l).

It can show you some of the highest resolution graphics available—280 x 192 in 16 gray scales, or, with a color monitor, in 16 colors.

HIT LIST.

We have a new edition of that monster hit, VisiCalc® with more modeling space than any other version. Plus Apple Writer III, a powerful new word processing package. Plus a new Business Graphics package. Plus a new Mail List Manager.

Plus a Pascal Utility Library that lets you take full advantage of all UCSD Pascal features.

Plus Access III—sophisticated smart terminal software to access mainframes with asynchronous communications up to 9600 bps.

Plus Apple II emulation to access that vast software library.

Plus, soon, a CP/M® card to access that other vast library.

Even with all this, the Apple III's potential remains essentially untapped.

So we're offering improved documentation, new programmer's aids, expert hotline counseling and an open channel to the industry leader in software publishing. Us.

See your Apple dealer for more information and, perhaps, a little comparison shopping.

We're sure you'll find that between our third generation and their first, there's quite a gap.

The personal computer. apple®

ANOTHER TECHNOLOGICAL ADVANCE FROM SHARP.

# THE AMAZING POCKET COMPUTER. IN LIVING COLOR.

Sharp's new PC-1500 may look like a programmable calculator but it's really a computer, small enough to fit in your pocket. A computer with specifications that, not long ago, would have been exciting in a considerably larger personal computer.

The PC-1500 has 2.6K bytes of RAM, expandable by means of plug-in modules to either 6.6K or 10.6K.

It has 16K bytes of ROM, which provides a version of Extended BASIC that handles two-dimensional arrays, program chaining and other advanced features.

Then there's our optional, incredible, pocket-sized, four-color printer. It prints out computer-generated curves, graphs, pie charts, drawings, just about anything, in red, green, black and blue and nine selectable character sizes.

That's in addition to the built-in liquid crystal display (7x156 dot) which can show almost anything, including game symbols, bar charts and so on.

And there's a dual audio-cassette interface for loading and saving programs.

The amazing Sharp PC-1500. It has so much capacity for such a small size that the definition of a personal computer may now have to be changed to a computer you can keep on your person.

See the Sharp PC-1500 perform, in living color, at your local retailer.

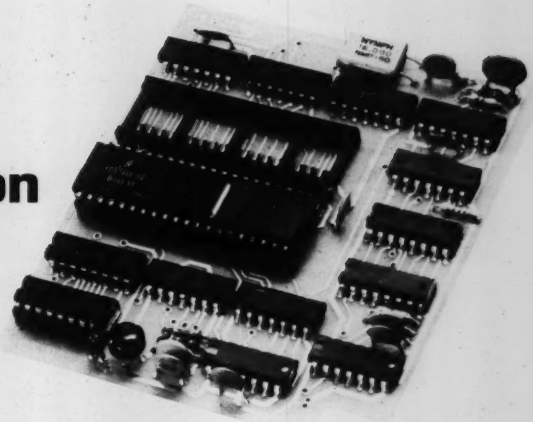
# A Winning Combination for Double Density on the TRS-80



*The Percom Doubler.*

**Ronald H. Bobo**

Apparently, the amount of software in one's possession expands to fill the storage media available. As the proud possessor of over 70 disks full of software, I recently decided that the time had come to make some changes.

As the owner of a TRS-80 Model I, I had three choices for storage: tape, floppy disks or hard disk. Since I was already using a pair of mini-floppies, and hard disk drives were out of my price range, another solution was needed.

That solution turned out to be a double-density disk controller.

Without getting technical, I will say that double density pertains not to the number of tracks on a disk but, rather, to the way those tracks are formatted and the manner in which information is recorded on them. Whether you now run a 35, 40, 77 or 80 track drive makes no difference; after adding double density, the number of tracks will remain the same, but more data will be packed into those tracks. Actually, the disk capacity is not really doubled; an increase of about 70% is what should be expected.

After reading advertisements for the Doubler from the Percom Data Company of Garland, TX, I bought one from my local dealer. The cost for the complete package, which also contains a disk operating system, was $219.95.

Ronald H. Bobo, 3246 Gravois, St. Louis, MO 63118.

The Doubler consists of a small printed circuit board containing a double-density controller and supporting chips, including an external data separator. The data separator corrects a design deficiency in the TRS-80 Model I which leads to CRC errors and locked out tracks when formatting the innermost tracks of disk.

The board also contains one empty 40-pin IC socket. Installation is simple and well documented. Simply remove the bottom cover from the expansion interface and locate the existing disk controller chip.

***Installation is simple and well documented.***

Carefully remove this from its socket and install it in the empty socket on the Doubler board, taking care that Pin 1 (on the end with the notch) faces in the same direction as the other 40-pin chip. Now, plug the board into the socket in the interface, again making sure the orientation is correct.

A word of caution: if your expansion interface is still in warranty, opening it will void that warranty.

On bootup, the controller determines whether the disk is single or double density and automatically selects the correct mode. As with nearly everything, there is an exception to this, the LDOS operating system, which will be covered later.

**The LNDoubler**

LNW Research of Irvine, CA, also manufactures a double density controller. The LNDoubler is priced at $175 and includes a copy of the DOSPLUS 3.3D operating system from Micro Systems Software.

Micro Systems Software has run full-page ads in most of the computer magazines offering a reward of $100 to anyone who finds a bug in the system. I can attest to the fact that this is a bonafide offer, since I found one! I reported it by phone, and several days later received a check. The bug, of course, has now been fixed.

Reports from owners of two different systems using the LNDoubler indicate that it will format some disks which have been rejected by the Percom unit. The LNW unit also has an onboard data separator.

**Percom Upgrade**

Shortly after hearing the good reports on the LNDoubler, I heard a rumor that Percom was doing a complete redesign on their unit. I made a hurried long distance call to the company, explained that I was doing an article on double density and asked about the rumor. I got a quick denial.

About two weeks later, the person who had denied knowledge of any redesign sent me a packet of literature and a press release on the Percom Doubler II.

Owners of the original version, said Percom, could receive an upgrade kit by sending in $30 and proof of purchase. The

complete unit, at this writing, is selling for $169.95.

The upgrade kit consists of a complete circuit board with everything in place except the disk controller chips, which are removed from the original board and re-used in the upgrade.

I must say it is a great improvement. Since installing it, I have been able to format many disks which were previously rejected.

Simply installing a double density controller is not enough to get rolling; you must also have a disk operating system capable of operating in double density for formatting, I/O etc.

**DBLDOS**

Percom's Doubler comes with a disk containing DBLDOS. For many months, DBLDOS and OS-80 (also from Percom) were the only double-density operating systems available for the Model I. Others are now available.

DBLDOS is a bare-bones system. Apparently similar to both TRSDOS 2.1 and NEWDOS+, it is adequate for getting started, but most people will probably wish to upgrade to a more powerful system.

Although DBLDOS has provisions for transferring programs between single- and double-density disks, it cannot read a single-density directory. When you begin to transfer your files to double density, you had better know what is on the disk.

Percom and other sources are now selling patch programs called Doublezaps which modify the NEWDOS-80 and VTOS 4.0 operating systems for double density compatability. Since I had been almost exclusively a NEWDOS-80 user, I was very much interested in this patch.

After observing it, I was somewhat disappointed. While orders of magnitude better than DBLDOS, the patched NEWDOS-80 is not compatible with single-density disks. It will read a single-density directory, which is an improvement, but any program to be run must first be transferred to a double-density disk. Some of the excellent copy routines of NEWDOS-80 were lost, when the original format routine was disabled and a double-density formatter substituted.

**NEWDOS-80**

Later, the opportunity arose to examine a NEWDOS-80 which had been patched with Doublezap II. A more expensive patch, this one includes a utility program called ADR/CMD for automatic density recognition. This allows you to have either single- or double-density disks in drives other than 0, which contains the double density system disk.

This appears to be a great improvement over the original Doublezap. The special NEWDOS-80 copy routines appear to be intact, and transferring files between single- and double-density disks is much simplified.

Making a backup, however, has to be done in two steps. First the disk must be formatted using a utility called DBLFMT/CMD. It is then copied using the NFMT option which, of course, is No Format. At some point in this operation, another utility, FIXBOOT/CMD must be run to apply the proper Boot sector to the backed-up disk.

While these patched programs do work, I am sure that NEWDOS-80 Version 2.0, which should be available by the time you read this, will be much better. Apparat is apparently doing a complete rewrite on the DOS and, as a bonus, Model I and Model III owners will be able to exchange files if both are using their respective versions of NEWDOS-80 2.0.

I have had no chance to observe the patch VTOS 4.0, so will reserve comment.

Both DBLDOS and the patched NEWDOS-80 will abort a format if five tracks are locked out. Since few of my disks are certified for double density, this happened several times.

In particular, the Doublezap II for NEWDOS-80 would not format anything in its original configuration. The format routine used puts a pattern of 6DB6's on the disk sectors. This is a worst-case pattern for double density. DBLFMT/CMD would not format any disk I had, including those rated for double density, until a zap was applied which changed the formatting pattern to the more common E5.

***One of my greatest objections to LDOS was its extreme slowness.***

After installing the Doubler II, I tried again with the 6DB6 pattern. It formatted and verified 40 tracks on everything but a very cheap, unbranded diskette. Even this could be formatted with 35 tracks.

Two of the later entries in the double density disk operating system field are LDOS and DOSPLUS.

**LDOS**

Some purchasers of LDOS were in for a surprise. Advertising for this close relative of VTOS 4 claims to support double density, and perhaps it does if one owns a Lobo expansion interface. (The DOS was originally marketed by Lobo Drives International of Goleta, CA. A separate organization, Logical Systems, has now been set up for this purpose.) Owners of the Radio Shack interface, however, found it necessary to obtain an additional driver program in order to activate the double density mode.

Activation is somewhat cumbersome, requiring that the system be booted in single density after which the driver may be loaded in one of two ways and, after this ritual is complete, one may switch a double-density diskette into Drive 0.

Once activated the system will read both single- and double-density diskettes automatically.

Perhaps it is not entirely fair to call LDOS a close relative of VTOS, since many improvements are said to have been made. With the skimpy VTOS documentation, who knew what capabilities that system had, anyway? Lobo has corrected this, issuing a manual of some 250 pages for LDOS.

One of my greatest objections to LDOS, whether single or double density, was its extreme slowness, a carryover from VTOS. If you called up a directory with the original version, it helped to have your lunch handy. A fix for this has now been implemented and LDOS has become a much better system.

Otherwise, LDOS appears to be a great operating system, containing many features usually found only on larger computers. Its owners swear by it.

**creative computing**
**SOFTWARE PROFILE**

**Name:** DOSPLUS 3.3D
**Type:** Disk Operating System
**System:** TRS-80 Model I or III
**Format:** Disk
**Language:** Machine Language
**Summary:** Impressive and useful
**Price:** $99.95
**Manufacturer**
Micro Systems Software, Inc.
Hollywood, FL

**DOSPLUS**

DOSPLUS seems to have been written with double density in mind from the beginning, and is the only operating system evaluated which gave me that impression. No patches or zaps to apply here, just stick the disk in the drive and go.

Priced at $99.95, DOSPLUS 3.3D is available from Micro Systems Software, Inc. of Hollywood, FL. A version is also available for the TRS-80 Model III.

DOSPLUS is compatible with all single-density operating systems for the TRS-80 Model I. What this means is that, as long as the double-density DOSPLUS disk is in drive 0, it doesn't care whether the other drives contain double- or single-density disks. DOSPLUS will read from or write to either one.

LDOS and DOSPLUS will also read one

APPLE COMPATIBLE

INTRODUCTORY OFFER

MSL 1595.00 — Call for Price — Save

The Franklin ACE* 100 is a professional personal computer that is hardware and software compatible with the Apple II† and includes many features not found on the Apple unit. All programs written for the Apple II will run on the Franklin ACE 100 without modification including those using high and low resolution black and white graphics. The ACE 100 is plug compatible with Apple. All peripherals designed for the Apple II will operate with the ACE 100 without modification.

The Franklin ACE 100 is a personal computer with the power, quality and reliability to meet the most demanding applications of the business professional. It comes complete with 64K of RAM memory which fulfills the demanding memory requirements of VisiCalc and CP/M based programs. The system includes a full upper and lower case keyboard with true shift capability and a numeric pad. The computer generates a full character set to the video screen that displays upper and lower case characters.

The 72 key keyboard includes an alpha lock key which simplifies operation with existing Apple software. The numeric pad cluster includes special keys such as period, plus, minus, greater than (go to) and asterisk (multiply) that are used frequently with VisiCalc.

The Franklin ACE 100 includes a joystick/ game paddle connector, a speaker and eight peripheral connectors. A built-in fan and a 50 watt power supply permit all eight peripheral connectors to be used without power or overheating problems.

### Franklin ACE 100 Features

- Apple II compatible
- 64K of RAM memory
- Upper and lower case
- Typewriter-style keyboard
- Twelve key numeric pad
- Alpha lock shift key
- VisiCalc friendly
- 50 watt power supply
- Built-in fan

CIRCLE 188 ON READER SERVICE CARD

another's disks, but are not compatible with any other double-density system I have checked.

Some impressive utilities are resident on the DOSPLUS system disk. CLRFILE zeros a disk file without reallocating the file space. COPY1 is a file copying routine for single drive users. CRUNCH is a compression utility which removes unnecessary spaces and REMarks from Basic programs, the better to conserve memory.

CONVERT modifies TRS-80 Model III TRSDOS data disks to allow reading by the Model I. Since Model I and Model III DOSPLUS data disks are already compatible, no conversion is necessary.

DISKDUMP allows display and modification of a disk sector, accessed by disk file name. DISKZAP is similar in capabilities to the many zap programs on the market, but can be toggled to operate in either single or double density. Access by file name is not available in DISKZAP—the desired track and sector numbers must be specified.

The FORMAT utility allows formatting a disk with any number of tracks from 35 to 80 in either single or double density.

PURGE is just that, a means of rapidly deleting unwanted files from a disk. If you purge too many, RESTORE will recover them, or any other file which has been inadvertently killed, so long as it has not been written over. The exception, files which have been killed under TRSDOS are completely expunged from the directory and no recovery is possible.

RENUM is used for renumbering all or part of a Basic program.

SCRIPFIX is a patch which modifies your existing copy of Scripsit or SuperScript to operate under DOSPLUS.

SPOOL is a printer spooler that works. You can allocate a block of memory to the printer, and go ahead and do something else with the computer while it prints out what is in the reserved block.

TRANSFER copies all non-system files from one disk to another—very handy when you are moving files from single- to double-density diskettes. MAP prints out a listing of file allocations showing just where each one is located on the disk.

**Library Commands**

In addition to the usual Library commands, DOSPLUS contains a few which may be new to you.

BUILD creates a file composed of a chain of commands, which is then started executing by DO. By using DO in conjunction with AUTO, it is possible to perform a great many tasks in sequence simply by booting the disk.

CLEAR zeros memory above 5700H. CONFIG is used to set disk drive parameters, as well as telling the computer whether or not to send graphic characters to your printer.

CREATE allocates space on the disk for a file. Reserving this space in advance will usually cause your file to be recorded in one continuous block, rather than being scattered over the disk.

FORCE lets you set parameters for printer drivers. When you print out a LISTing with this system, it is very neatly divided into pages.

Typing FREE while running DOSPLUS does not produce the customary line telling how many granules are available on each drive. Instead, a disk map is printed out showing the status of each granule. "X" signifies that the granule is in use, a period indicates a free granule, "L" is a locked out granule, and "D" shows the directory granules.

The primary use of PAUSE is to stop execution of a DO file until the operator presses Enter, as when a disk must be changed. By means of the CMD function, it may also be used from Basic.

RS232 reads the switch settings on the RS232 serial port if one is installed, and allows changing them in software.

***A global search and replace feature is included for ease of mass editing.***

**Extended Z-80 Disk Basic**

DOSPLUS Extended Z-80 Disk Basic is compatible with Radio Shack Disk Basic, but minor syntax changes may have to be made if the following are used in a program statement:

PRINT &O for octal conversion is not supported.

CMD "S" will return an error message. To return to DOSPLUS, it is only necessary to type CMD and press Enter.

CMD "I" has been eliminated. To execute DOS commands from Basic, type CMD, enclose the desired command in quotes, and press Enter.

Unlike the Radio Shack system, no file buffers are reserved automatically upon entry into Basic. Both number of files and protected memory must be specified at the time Basic is called. For instance; Basic filespec-F:3-M:61000 will load Basic, open three file buffers, protect memory above 61000, and load and run the specified Basic program.

DI, when followed by two line numbers, as DI 10,100 will delete line 10 and insert it as line 100. DU is similar, except the first line is not deleted, it is duplicated at the new location.

Several new one- and two-character abbreviations have been added to make editing easier.

OPEN "E" opens a sequential disk file for output and places a pointer at the end of the file. Data may be added to the file without having to load it into memory first.

Variable length records are supported in the random file mode, up to a maximum of 256 bytes. Simply use the following format:

Open "R",1,"filespec",51

Your record length will be 51 bytes. If you specify a length that is not evenly divisible into 256, file space is not lost; records will span across sector and track boundaries.

The trace function in Basic, turned on and off by TRON and TROFF, is considerably different from what TRSDOS users are accustomed to seeing. The DOSPLUS version is actually a Basic single-stepper. Statements are executed one at a time by pressing either ENTER or the space bar.

CMD "REF",K,L,V prints out all references in your program to keywords, variables and line numbers. They may be referenced either all three at once, as above, or one or two at a time. Adding a "P" outputs the display to the line printer.

CMD "M" displays all variables currently allocated, along with their values.

Would you like chaining capability between Basic programs? Adding a comma and "V" will save the variables from your current program, and carry them over to the program "TEST/BAS." Variables set as a literal or through DATA statements are not saved.

A global search and replace feature is included for ease of mass editing. Activated by CMD "SR", it will search the entire Basic program and display or replace any string variable or expression. From an example given in the DOSPLUS manual, CMD"SR",":",CHR$(10)+":" will search the whole text and insert a line feed in front of every colon, thus making the program easier to read.

As if all that were not enough to make a great system, Micro Systems Software has also included TBasic on the DOSPLUS disk. This is a tiny Disk Basic which will give users approximately 3K of extra memory space.

While DOSPLUS documentation is not extensive (it consists of a 48-page manual), it is written in an easy to understand style and appears adequate.

If you have the impression by now that I think double density is great, you are absolutely right.

Transferring most of my files to double density allowed recovery of more than three boxes of disks. Now, if the amount of software doesn't expand too fast... □

# It's Here! The Computer Strategy Game with Bounce!

**For:**
**Apple**
**Atari**
**TRS-80**

Have you ever seen an exciting action game combined with the intense strategy of chess, backgammon or Othello? Ricochet...the first abstract strategy game designed **exclusively** for the computer owner... is both. And loads of fun.

You maneuver your blocks, both to protect your own goal from attack **and** to hit your opponent's goal. Two launchers to fire. Your shots ricochet off the blocks, earning you points on the way to their targets. It's twice as challenging because the position changes with both your own and your opponent's moves and shots.

You don't have to play alone, either. Play against any one of four different opponents (each a different personality) inside your computer, or against another human.

And Ricochet is truly competitive...if you want it to be. A "smart clock" lets you put more pressure on your opponent by forcing him to play faster than you. But you've got to win two out of three (or three out of five) games to claim victory. Your computer rates you after each match, so you can compare your mastery of the game with that of other players—perfect for tournament play. So perfect that MIND TOYS and Automated Simulations are sponsoring the first national Ricochet tournament. See your local dealer to find out how you can become a regional or national champion.

**Price $19.95**

# The $149.95 personal computer.

## Introducing the Sinclair ZX81

If you're ever going to buy a personal computer, now is the time to do it.

The new Sinclair ZX81 is the most powerful, yet easy-to-use computer ever offered for anywhere near the price: only $149.95* completely assembled.

Don't let the price fool you. The ZX81 has just about everything you could ask for in a personal computer.

### A breakthrough in personal computers

The ZX81 is a major advance over the original Sinclair ZX80—the world's largest selling personal computer and the first for under $200.

In fact, the ZX81's new 8K Extended BASIC offers features found only on computers costing two or three times as much.

Just look at what you get:

- Continuous display, including moving graphics
- Multi-dimensional string and numerical arrays
- Mathematical and scientific functions accurate to 8 decimal places
- Unique one-touch entry of key words like PRINT, RUN and LIST
- Automatic syntax error detection and easy editing
- Randomize function useful for both games and serious applications
- Built-in interface for ZX Printer
- 1K of memory expandable to 16K

The ZX81 is also very convenient to use. It hooks up to any television set to produce a clear 32-column by 24-line display. And you can use a regular cassette recorder to store and recall programs by name.

*Plus shipping and handling. Price includes connectors for TV and cassette, AC adaptor, and FREE manual.

### If you already own a ZX80

The 8K Extended BASIC chip used in the ZX81 is available as a plug-in replacement for your ZX80 for only $39.95, plus shipping and handling—complete with new keyboard overlay and the ZX81 manual.

So in just a few minutes, with no special skills or tools required, you can upgrade your ZX80 to have all the powerful features of the ZX81. (You'll have everything except continuous display, but you can still use the PAUSE and SCROLL commands to get moving graphics.)

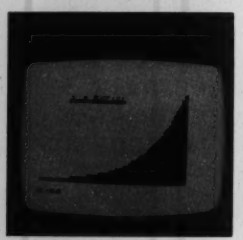
With the 8K BASIC chip, your ZX80 will also be equipped to use the ZX Printer and Sinclair software.

### Order at no risk**

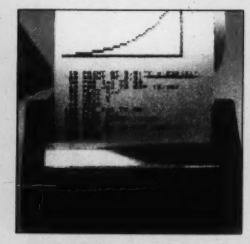
We'll give you 10 days to try out the ZX81. If you're not completely satisfied, just return it to Sinclair Research and we'll give you a full refund.

And if you have a problem with your ZX81, send it to Sinclair Research within 90 days and we'll repair or replace it at no charge.

**Does not apply to ZX81 kits.



**NEW SOFTWARE:** Sinclair has published pre-recorded programs on cassettes for your ZX81, or ZX80 with 8K BASIC. We're constantly coming out with new programs, so we'll send you our latest software catalog with your computer.



**ZX PRINTER:** The Sinclair ZX Printer will work with your ZX81, or ZX80 with 8K BASIC. It will be available in the near future and will cost less than $100.

**16K MEMORY MODULE:** Like any powerful, full fledged computer, the ZX81 is expandable. Sinclair's 16K memory module plugs right onto the back of your ZX81 (or ZX80, with or without 8K BASIC). Cost is $99.95, plus shipping and handling.

**ZX81 MANUAL:** The ZX81 comes with a comprehensive 164-page programming guide and operating manual designed for both beginners and experienced computer users. A $10.95 value, it's yours free with the ZX81.

# The $99.95 personal computer.

## Introducing the ZX81 kit

If you really want to save money, and you enjoy building electronic kits, you can order the ZX81 in kit form for the incredible price of just $99.95* It's the same, full-featured computer, only you put it together yourself. We'll send complete, easy-to-follow instructions on how you can assemble your ZX81 in just a few hours. All you have to supply is the soldering iron.

### How to order

Sinclair Research is the world's largest manufacturer of personal computers.

The ZX81 represents the latest technology in microelectronics, and it picks up right where the ZX80 left off. Thousands are selling every week.

We urge you to place your order for the new ZX81 today. The sooner you order, the sooner you can start enjoying your own computer.

To order, simply call our toll free number, and use your MasterCard or VISA.

To order by mail, please use the coupon. And send your check or money order. We regret that we cannot accept purchase orders or C.O.D.'s.

**CALL 800-543-3000.** Ask for operator #509. In Ohio call 800-582-1364. In Canada call 513-729-4300. Ask for operator #509. Phones open 24 hours a day, 7 days a week. Have your MasterCard or VISA ready.

These numbers are for orders only. For information, you must write to Sinclair Research Ltd., 2 Sinclair Plaza, Nashua, NH 03061.

# galaxy of features

**A GALAXY** of features makes the **LNW80** a remarkable computer. As you explore the **LNW80**, you will find the most complete, powerful, ready to run, feature-packed personal and business computer ever made into one compact solid unit.

**MODEL I COMPATIBILITY** – The **LNW80** is fully hardware and software compatible with the Model I. Select from a universe of hardware accessories and software – from VisiCalc® to space games, your **LNW80** will launch you into a new world of computing.

**FULLY LOADED** – A full payload includes an on-board single and double density disk controller for 5 ¼" and 8" single or double sided disk drives. RS232C communications port, cassette and parallel printer interfaces are standard features and ready to go. All memory is fully installed – 48K RAM, 16K graphics RAM and 12K ROM complete with Microsoft **BASIC**.

**QUALITY CONSTRUCTION** – Instrumentation quality construction sets **LNW80** computers apart from all the rest. Integrated into the sleek solid steel case of the **LNW80** is a professional 74-key expanded keyboard that includes a twelve key numeric keypad.

**HIGH RESOLUTION GRAPHICS & COLOR** – The stunning 480 X 192 resolution gives you total display control – in color or black and white. The choice of display formats is yours; 80, 64, 40 and 32 columns by 24 or 16 lines in any combination of eight colors.

**PERFORMANCE** – Lift-off with a 4MHz Z80A CPU for twice the performance. The **LNW80** outperforms all computers in its class.

Our down to earth price won't send you into orbit

LNW Research Corp.

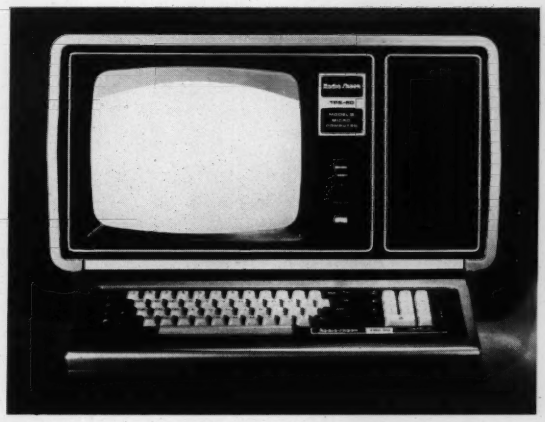
# The TRS-80 Model II and Pickles & Trout CP/M

*Andrew Klossner*



Early in 1981, I needed a system on which to run CP/M version 2. My requirements included a fast Z80, a full complement of memory, large memory-mapped video display for word processing, a detachable keyboard with a good feel and upper and lower case, and an 8" floppy disk drive.

As a hardware novice, I needed service facilities. As a regular working bloke, I needed something inexpensive. My choice: a Radio Shack TRS-80 Model II, for which I paid $3400. After six months of daily system use, I have yet to regret it.

**The Hardware**

The design of the Model II is far better than the Radio Shack reputation led me to anticipate. It represents an excellent trade-off between cost and features. It is also one of the first desktop computers to pay serious attention to human engineering and ergonomics.

In one package, the Model II incorporates an 80 x 24 character display and an 8" double density floppy disk drive. Inside there is a Z80 microprocessor ticking at 4 MHz, 64K of usable RAM, a Centronics printer parallel port, two RS-232 serial ports, and two real time clocks. The keyboard connects via cable. Since you pay for a single cabinet and power supply, you save a great deal over the cost of separate components, although you lose the ability to upgrade your system selectively.

**External Organization**

The keyboard features upper and lower case in the standard QWERTY layout. Special keys include Tab, Esc, Backspace, Break, Hold, Enter, F1, F2, and four cursor control keys. A numeric keypad lies to the right. The tilde, backslash, vertical bar, and rubout characters are typed by holding down the Ctrl key and striking "6," "9," "0," or "-." There is no way to type an accent grave; this annoying deficiency means that 127 of the 128 possible ASCII codes can be entered.

There are no "typeamatic" keys. Instead, a Repeat key is provided. Both a Lock and a Caps key are included; the former works like a typewriter Shift Lock, while the latter locks only the letters to produce all upper case. Both keys glow red when active, thanks to embedded LEDs.

The display uses a white phosphor. Warmup of the tube takes less than four seconds; it comes on before CP/M finishes booting. The character set is well designed and is pleasing to look at, with true lower case descenders. Besides blank and the standard 94 printable characters (including accent grave), there are 33 "business graphics" characters, useful mostly for margins and bar charts. Each character can be displayed in normal or reverse video.

The disk drive is mounted to the right of the display, facing the operator. My unit came with a Shugart 801 which seeks reliability at six milliseconds per track. This means that there is no meat grinder sound; head movement is whisper quiet. A disk expansion unit with up to three additional drives can be connected at the back.

The Power and Reset switches are located between the display and the disk drive. This position of the Reset key is far superior to a place on the keyboard (where it can be accidentally struck, to disastrous results) or on the back of the chassis (where you have to fumble to find it). To reset the computer, you must lift the key, so a falling object will not affect it. This is, unfortunately, not true of the Power switch, which is On when raised and Off when lowered. Power status is indicated by a red light between the two switches.

The Centronics and RS-232 connections are at the back of the chassis. After removing two screws and breaking the

Andrew Klossner, P.O. Box 283, Wilsonville, OR 97070.

warranty seal, the cover can be pushed back and swung up and away. This is harder than it sounds; in learning the trick, which is described nowhere in the available documentation, I broke two of the four plastic pins which hold the cover flush with the back chassis wall.

**Internal Organization**

The system is based around a custom bus, which is designed to make full use of the Z80 family of parts. All peripheral interfaces are interrupt driven, and the disk controller is capable of performing direct memory access, so that disk I/O and computation can be overlapped. Boards are plugged into an eight-slot backplane, of which only four are used in an off-the-shelf unit.

The power supply is not extravagant; when the disk head is loaded, the display image contracts. A ventilation fan spins constantly when power is on.

The CPU board contains a Z80A, along with a DMA chip, two SIO ports, a counter/timer chip, and a 2716 ROM. The ROM is mapped into the lower 2K of memory upon power up or Reset. The bootstrap code performs extensive diagnostics, then loads the operating system from disk, which disables the ROM with an OUT instruction to leave RAM throughout the memory space.

The floppy disk controller board features a Western Digital 1791 controller chip which can manipulate single or double density disks. Although Radio Shack doesn't advertise it, the board contains all the necessary circuitry to run a double sided drive. It also has a PIO chip for the Centronics port.

The video/keyboard interface board holds an additional 2K of RAM, which can be mapped into the top 2K of memory at the flip of a bit in an I/O port. Each of the first 1920 bytes corresponds to a character position on the screen. A reverse video (black on white) character is selected by setting the high bit. A Motorola MC6845 chip drives the display and supports various sizes and speeds of blinking cursors.

This board also has a 60 Hz clock and the keyboard interface, both of which signal interrupts by pulling on the NMI (non-maskable interrupt) line.

The fourth board contains either 32K or 64K of dynamic RAM, depending upon which option you order. Bank select circuitry is provided, allowing any of up to fifteen 32K pages to occupy the upper half of active memory. Further memory boards can be purchased to expand the system to as much as 512K, but neither TRSDOS nor CP/M supports more than 64K RAM.

**The Software**

The Model II comes with TRSDOS and a Microsoft Basic interpreter at no extra charge. However, since I bought my computer to run CP/M, I rarely boot the Radio Shack disk.

After researching the available implementations of the CP/M operating system for the Model II, I bought CP/M version 2.2 from Pickles & Trout. The BIOS (Basic I/O System, the code which must be customized to each new machine) in this package is well thought out. It includes several practical features, while eschewing the expensive flash incorporated into CP/M by many hardware manufacturers. Contrary to published reports in some usually reliable periodicals, no hardware modification is necessary to support CP/M on the Model II, and there is no point in asking a Radio Shack dealer to install the CP/M "option."

Perhaps the most useful aspect of this software is its support of virtual disk drives. This allows a program on a single-drive machine to run as though up to four drives were on-line. When the program attempts to switch to a new drive, CP/M displays a message asking the operator to mount the appropriate disk, then waits for Enter to be typed.

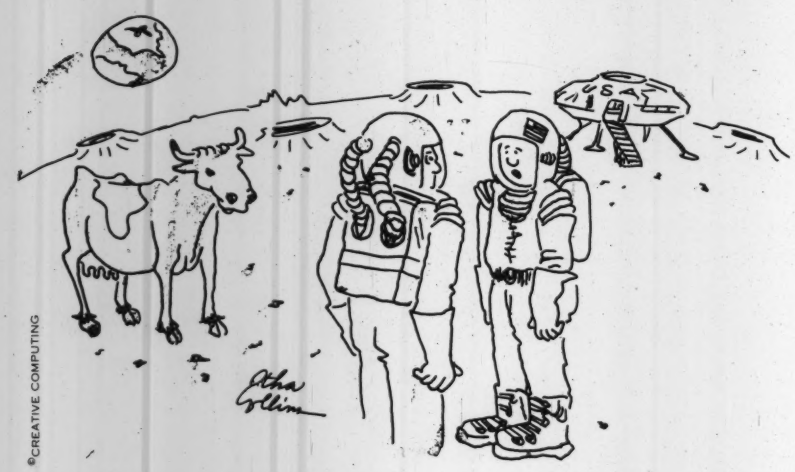
Another extremely important feature is a software type-ahead buffer, which allows keystrokes to accumulate until called for. Many word processing packages also incorporate this feature at the application level, but, unless it is present in the operating system, keystrokes entered during disk I/O activity can be lost.

P&T CP/M supports both the standard single density disk format and its own double density format which provides 600K bytes per volume. This latter is implemented with 512-byte physical sectors, and is a great improvement over the 480K available on a formatted TRSDOS diskette. Only a double density disk can be made bootable.

The operating system allows the baud rate of the serial ports to be selected independently. Any of three different handshaking techniques can be specified, to allow slow devices to request a pause in the flow of data while they catch up. I connect a NEC Spinwriter and let CP/M perform XON/XOFF handshaking; the printer sends control-S to stop output, and control-Q to resume.

The console output routine in the BIOS emulates a CRT terminal by accepting characters and placing them into video memory. Control characters such as carriage return, line feed, backspace, and tab cause the standard display result. Other control codes are defined to perform functions such as clear screen, line insert/delete, toggle reverse video mode, toggle graphics mode, and direct cursor addressing. A program can also request that the video RAM be mapped in for access, allowing near-instantaneous screen update by word processors.

Besides the standard assembly language program entry to the BIOS through location 0, P&T CP/M supports an alternate entry point at location 40 through which additional services can be requested. These include configuring the I/O ports, performing serial or parallel I/O, setting and reading the time of day clock, and selecting display options such as whether lines wraparound or the cursor blinks.



*"...And I always thought she made it over."*

# IBM's new baby just grew up.

## SEATTLE COMPUTER'S NEW RAM+ GIVES YOU THE MEMORY YOU NEED AT A PRICE YOU CAN'T FORGET.

A great new machine, the IBM personal computer, just got better. With RAM+, the new expansion memory from Seattle Computer.™

RAM+ can change your personal IBM from a pony to a workhorse by adding up to 256 K of memory. RAM+ is expandable, reliable and is made by Seattle Computer, the people who created the operating system for the IBM personal computer.

To make your IBM work even better, each RAM+ card has a RS-232 serial port which uses IBM supplied software. And RAM+ comes fully assembled, tested and with a 90 day guarantee.* The RAM+ is available in 64 K, 128 K, 192 K or 256 K, with affordable prices ranging from $475. to $1,075. Expansion kits are also available.

*Extended warranty available.

**How to order:** Call Anna Ford at **(206) 575-1830** for the location of the nearest RAM+ dealer.

The RAM+ —a great addition to your IBM personal computer. At a great price.

Dealer inquiries welcome.

SEATTLE COMPUTER

1114 Industry Drive, Seattle, Washington 98188

**CIRCLE 233 ON READER SERVICE CARD**

In addition to the usual utilities, P&T CP/M comes with programs to format and certify diskettes, configure I/O ports, and select disk seek rate. The IOFREEZE program allows the operator to set default attributes, which apply when the system is booted. AUTOEXEC can be used to select a command for execution upon every cold or warm boot. TRS2CPM reads a file from a TRSDOS disk. FASTCOPY copies one disk to another, and is optimized to function well with a single disk machine, where it fills all of RAM with data before asking the operator to switch disks.

The major drawback to Pickles & Trout CP/M is that the source code for the custom BIOS is not included. Even a listing would be valuable to the assembly language programmer trying to make full use of the hardware. For example, a program can request that a specific routine be given control when the counter/timer ticks, which happens 100 times per second. This routine must return via the RET instruction. There is no way to determine the contents of the user's registers at the time of the interrupt, or to modify the PC before returning, as a debugging routine might need to do.

Another problem, which may be either a hardware or software fault, is that activation of the Reset key when the disk is active does not completely reset the computer. Typically the display screen fills with garbage, the disk remains active, and subsequent use of Reset is ineffective. In these cases, the only way to recover is to power down the machine for fifteen seconds. This is especially inconvenient when a lengthy, disk I/O bound program must be halted.

For those who are handy at connecting different disk drives, P&T offer versions of CP/M which support double sided drives, for a capacity of 1.2 megabytes per volume, and versions which work with Winchester hard disk units.

***Pickles & Trout CP/M represents one of the best jobs of customization in the CP/M domain.***

**The Documentation**

The TRS-80 Model II comes with an owner's manual, which contains brief operating instructions, a TRSDOS manual, and a Basic manual. For thirty dollars you can get a technical reference manual, which is extremely complete and well written. It includes fully annotated schematics for every circuit and a separate chapter for each board and major component, as well as the manufacturers' data sheet for the LSI chips. It could be improved only by the addition of a listing of the boot ROM.

Pickles & Trout CP/M comes with the usual five manuals from Digital Research. In addition, a well written user's manual introduces the reader to CP/M and details the additional features provided by the custom BIOS.

**A Personal History**

When I first decided to buy a Model II, I approached the local Radio Shack Computer Center about the possibility of leasing, which they were pushing in a newspaper advertising campaign. It turns out that the lease program is intended only for businesses, not for consumers; my application was turned down.

I then did some shopping around to see what range of prices was available. All the stores that I visited which carried the Model II charged the list price of $3890. The hobbyist magazines, on the other hand, were full of ads from mail order houses with prices as low as $3400. I selected a dealer who is located within a comfortable drive of the factory in Texas and sent him my life's savings; shortly later, my new computer appeared at the local airport.

The system worked flawlessly for a month, but then began to show some flaky behavior patterns. These were characterized by a failure of the self test upon power-up or Reset.

In addition, the disk drive head began squeaking at the six milliseconds step rate,

## GLOSSARY

*Non-maskable interrupt*—An interrupt is a signal that stops the normal program flow and causes execution of a specific vectored routine, after which control returns to the original program. Some interrupts can be disabled by setting a bit mask. A non-maskable interrupt cannot be stopped.

*Controller chip*—Any processor dedicated to control of a peripheral such as a disk drive.

*Handshaking*—Communication between a computer and peripheral or other computer, indicating whether a device is ready to send or receive data.

*Wraparound*—The continuation of a word from the right margin of a screen to the left margin of the next line.

*Format (verb)*—To place output in a predetermined form or arrangement. Also, to prepare a disk for data storage.

*Source code*—A program in human-readable form before compilation or assembly. Source code usually includes comments and meaningful labels.

*Assembly language*—A mnemonic representation of machine language. Assembly language uses op codes such as JMP (for jump) rather than the actual hex value that represents the instruction.

*Register*—A location in a microprocessor that is capable of holding a value. Used to load and store memory, and for internal operations.

*Port*—A hardware location used for input or output of information.

*ASCII codes*—The American Standard Code for Information Interchange, which represents alphanumeric characters and special controls as numbers.

*White phosphor*—The coating on the inside of a television picture tube which produces a white dot when exposed to an electron beam.

*Bus*—The lines connecting processors, memory, and other portions of the computer that send or receive data.

*Z80/Z80A*—One of the more popular microprocessor families, containing a powerful instruction set.

*Interrupt driven*—A device or routine that operates during interrupts.

*CPU*—Central processing unit. This is the microprocessor on which the computer is based.

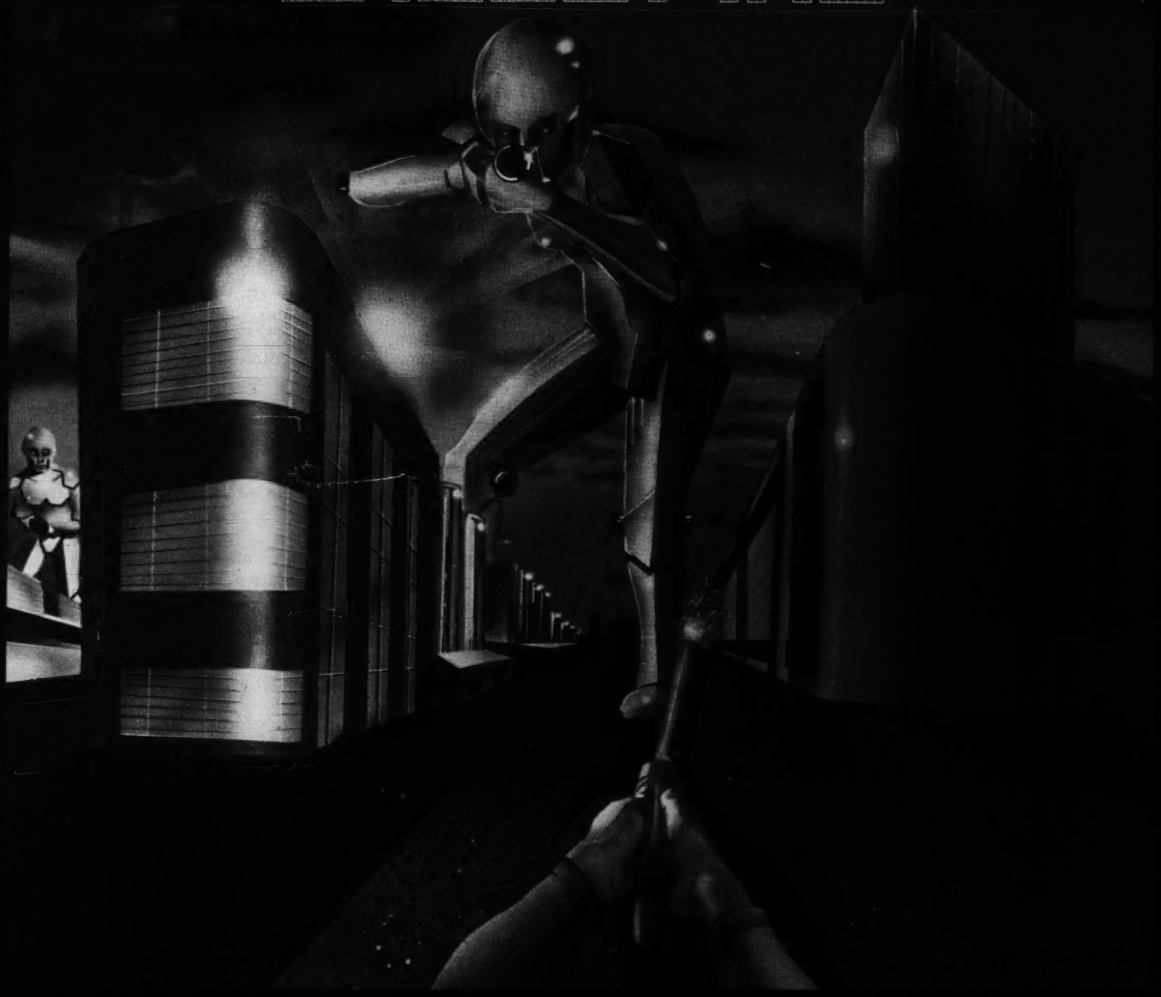
*DMA Chip*—A chip which can read memory using Direct Memory Access rather than requiring information to be passed by the CPU.

*Bootstrap*—A routine that allows the computer to read other programs. In essence, the computer is pulling itself up by its bootstraps.

*PIO chip*—A chip dedicated to Programmable Input and Output.

*Bank Select Circuitry*—A system allowing a CPU to address more memory than it is designed for by switching between different banks of RAM.

# CROSS FIRE



They have landed and are taking over the city. Steadily they are making their way across the city, destroying everything in their paths. The town has been evacuated and your regiment has retreated leaving you, alone in the city, at the mercy of the aliens.

The aliens have you surrounded, and laser shots fly from all directions. Your movements are confined but you haven't given up. If you're going to live, you'll have to concentrate on where the shots are coming from and where you're going because if you don't, you'll get caught in the **CROSS FIRE**.

**CROSS FIRE** is a unique new game by JAY SULLIVAN featuring HI-RES graphics and sound, smooth quick animation, and some of the best arcade challenge available anywhere. **CROSS FIRE** runs on any 48K APPLE II/II PLUS DOS 3.2 or 3.3 and is available now for $29.95 on disk from your local computer store or you may order directly from.....

**VISA, MASTER CHARGE, C.O.D. or CHECKS ACCEPTED**

and I had to increase it to ten and put up with the meat grinder sound.

Eventually the machine failed so completely that the power-up sequence ended with a display of garbage, and I had an opportunity to investigate Radio Shack's claim of readily available service. I took the machine to the local Computer Center for maintenance under the terms of the ninety day warranty.

This first experience with the service department was extremely frustrating. To begin, they promised to have my computer ready in 24 hours, or "48 at the outside." A week came and went while it sat unattended in the back of the repair depot despite daily telephone calls. In accordance with Murphy's Law, when they finally began to run their diagnostic package, it worked flawlessly, so they didn't bother to open the box. Eventually I retrieved it and spent the rest of the warranty period making regular impact adjustments with my shoe.

On the day that the warranty expired, a hardware-wise friend popped the cover and immediately spotted the problem. The bar which holds the boards against the backplane had too much give, and the boards were working their way out. Also, many of the socketed chips were not well seated. A bit of re-seating eliminated the flakies, and a spot of lubricating oil on the disk drive ended the squeaks. (The lubrication procedure is described in the P&T manual.) If the service technician had been at all experienced with the Model II, he would have recognized my symptoms and done this himself.

***I selected a dealer and sent him my life's savings.***

Several months later I had cause to return to the service department when the machine failed again. I was prepared for another nightmare, but this time I came away satisfied. There had been a complete turnover of service personnel, and the new technician diagnosed a bad disk interface board, swapped it for a good one, and made a variety of mechanical adjustments in less than two hours while I read science fiction in the front office. He also ran the P&T disk certification utility to check out the new board; TRSDOS has no analogous program. Although the computer was out of warranty and my bill was over $100 (of which $70 was for the board switch), I was happy with the experience and will not hesitate to return if another problem develops.

In all honesty, I must shoulder some of the blame for my computer's failure. For several months I used it both at home and at work, and it commuted with me. The resulting jostling was doubtless the cause of the loosened boards. The Model II is not advertised to be portable, and I have no doubt that if I had installed it in one spot and never moved it, it would not have failed.

**Conclusions**

The TRS-80 Model II is an excellent CP/M system for the person who is not well versed in hardware. To date, it is alone among inexpensive all-in-one units in offering a standard 8" disk drive instead of 5¼" minifloppies.

When purchasing a Model II, the buyer should ensure that the seller is an authorized Radio Shack dealer, and should get the dealer's "authorized dealer number" for presentation when obtaining service under warranty. If a Model II is bought from an unauthorized dealer, the warranty is voided.

Pickles & Trout CP/M represents one of the best jobs of customization in the CP/M domain. The resulting programming environment is head and shoulders above the more mundane efforts produced by many hardware manufacturers in support of their systems.

CP/M version 2.2 is available for $175 from Pickles & Trout, P.O. Box 1206, Goleta, CA 93017. □

# NEW HIGHER PRINTING SPEED, NEW LOWER PRINTER PRICE

### High-speed printer

The Heath/Zenith 25 Printer is a heavy-duty, high-speed dot matrix printer that gives you sharp, clear printouts. It prints crisp, clear copy at speeds over 150 characters per second with quiet smoothness.

Baud rates from 110 to 9600 are user-selectable.

### Versatile printer

The 25 prints the entire 95-character ASCII set in upper case and lower case with descenders, in a 9x9 matrix. Also, 33 block graphic characters – which are compatible with the Heath/Zenith 89 All-In-One Computer and the 19 Smart Video Terminal – let you create graphs and charts. All functions and timing are microprocessor-controlled.

Plug-in ribbon cartridges make ribbon replacement a no-mess snap.

The 25 works with most computers and terminals – using an RS-232C Serial Interface or a 20 mA current loop with handshaking control signals.

### Low-priced printer

The 25 has all the features you've been looking for in a high quality, high-speed dot matrix printer – for only $1095 in kit form, or for only $1595 assembled and tested.

### Free demonstration awaits you at your Heathkit Electronic Center †

Pick the store nearest you from the list below. And stop in today for a demonstration of the new Heath/Zenith 25 Printer. If you can't get to a store, send $1.00 for the latest Zenith Data Systems Catalog of assembled commercial computers. We'll also send you a free copy of the latest Heathkit® catalog. Write to Heath Company, Dept. 355-904, Benton Harbor, MI 49022.

The Organizer®
The Organizer© is available for Apple* and IBM** personal computers.
Suggested retail price: $250
Telephone dialer: 75
You thought that with a computer you could store information simply by touching a button. Well, now you can.
The Organizer™ is a new kind of personal and professional support, one which meshes familiar ways of doing things with the versatility of a computer. When using The Organizer™, your view of data remains like the one you've had with file cards, address books and appointment calendars. And that's just the beginning.
We've put all of your desk tools together in one place;
an appointment calendar,
index cards & notepads,
a calculator,
an automatic phone dialer,
a programmable alarm clock,
and they talk to one another.
Using The Organizer is so natural you'll forget there's a computer behind it.

# A Hard Disk's Night

## *An In-Depth Look At Mass Storage Options*

*Glenn A. Hart*

Someone once said that you could always identify the pioneers in the Old West—they were the ones with the arrows in their behinds. I've always disagreed with the implied philosophy that you are always better off waiting a while before trying new things.

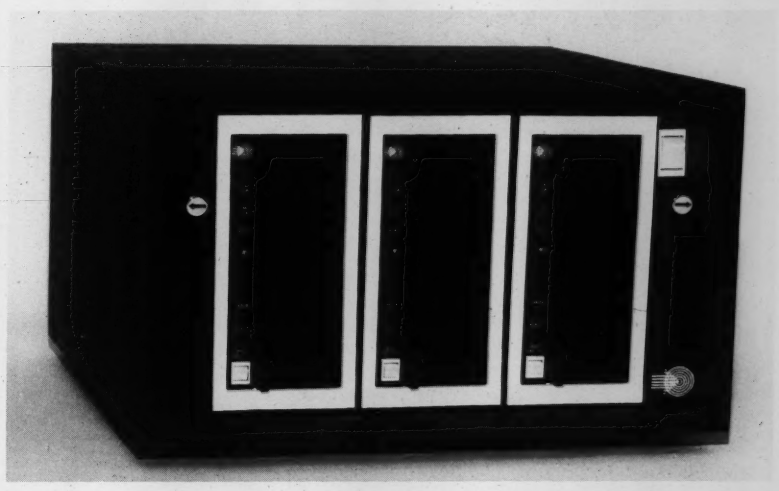
There are those who say that a new technology will be further perfected, a given format or design might become obsolete, the price will come down and many other rationalizations for procrastination. I feel that while all these things might happen, I can be deriving much pleasure from the new device and have a head start on understanding whatever the new technology brings.

Of course, I pay a price for this; sometimes the price *does* come down and equivalent or superior devices are available for far less than I paid for my early version. All in all, however, pioneering pays great dividends.

Most of my friends and associates in the microcomputer field very much subscribe to this point of view. We were real pioneers in the distant past (only five years ago) when microcomputers emerged as an almost science-fiction-like new frontier. We all knew that micros were something special, devices that would someday change the face of our society, and we all wanted a piece of the action.

All of us spent (and continue to spend) uncountable hundreds and thousands of hours tinkering, experimenting, working and playing, and all of us came away richer in some way from the investment of capital and time; some have earned significant amounts of money, some have made microcomputers their life's work, all have expanded their horizons and learned more about both the equipment and themselves.

Glenn A. Hart, 51 Church Road, Monsey, NY 10952.



If you gather that I enjoy computing, I've made my point! I was in the game early and have never regretted it. Over the years, I have had four major computer systems (as well as several secondary systems, programmable calculators, pocket computers, etc.)

During this period, remarkable changes have taken place in many areas. A 16K system was pretty big at the beginning, now I have 256K. We were excited by the features offered by 8K Basic interpreters, now I have well over a dozen high level languages, some of which occupy tens of thousands of bytes through sophisticated overlay techniques.

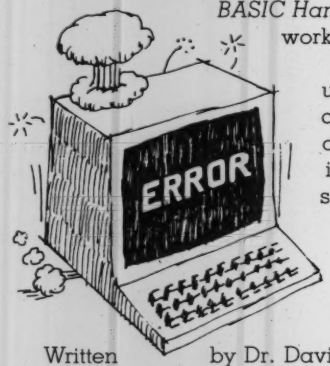
My video terminal operates at 19,200 baud, a bit faster than my first 300 baud terminal. My slow and noisy 40-column printer has been replaced by a combination of daisywheel and 300 line per minute high speed printers. Word processing, financial planning, and other powerful programs are a far cry from our early delight in checkbook balancing programs.

For all of this, perhaps the greatest hardware changes have taken place in the mass storage devices available for microcomputers. Mass storage affects two main areas of system operation: the amount of data which can be stored "on-line," or readily accessible, and the speed and convenience of overall system operation. Both factors are extremely significant in determining the appropriate uses of a given system, and the limitations imposed by mass storage usually have a greater impact on what a micro can do than which CPU is used, the system clock speed, the type of terminal and its speed, what kind of printer is used, etc.

Each of the four systems I have had has used increasingly sophisticated mass storage devices. An examination of each system will show how far microcomputers have come in a relatively short time and allow us to review the main types of mass storage peripherals currently available.

# When your computer won't speak your language, you need a basic handbook.

As a matter of fact, everyone who works in BASIC needs *The BASIC Handbook*. It is *the* definitive reference work on the subject of BASIC.

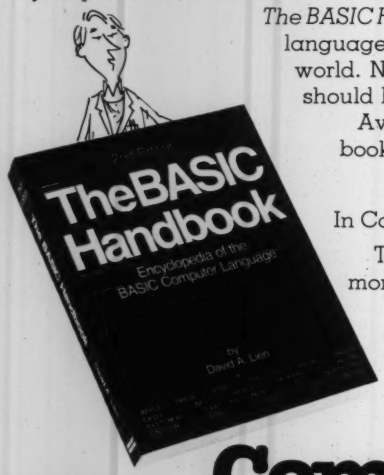


*The BASIC Handbook* is an easy-to-use encyclopedia of nearly 500 words covering the "dialects" used by virtually every BASIC-speaking computer in the world. But more than that, it's a simple, step-by-step guide to translating programs from one computer to another. So now you can actually use software printed in magazines and elsewhere, no matter what computer you own.

Written by Dr. David A. Lien, author of the *Tandy TRS-80 Level I User's Manual* and the *Learner's Manuals* for the Epson MX printers, this completely revised Second Edition contains almost twice as many entries as the best selling First Edition, making it by far the most up-to-date BASIC reference book you can buy.

# The BASIC Handbook

Extensively indexed and cross-referenced, *The BASIC Handbook* gives you 480 pages packed with the information you need to be a better programmer. And if, after 30 days you don't agree it's indispensable, send it back. We'll return your money.



*The BASIC Handbook* is available in several languages and accepted throughout the world. No one who programs in BASIC should be without it.

Available at better computer and book stores, or call **(800) 854-6505**

In California **(714) 588-0996**

To order by mail, send check or money order for $19.95 (California residents add 6%), plus $1.65 shipping and handling. Overseas orders send $19.95 plus $2.38 surface shipping and handling.

**The Early Days: Audio Cassettes**

My first system was a Southwest Technical Products 6800. I built it completely from kits. While I had assembled many tube kits, including various stereo equipment, oscilloscopes and even a color television, this was my first experience in building anything using IC's. I found the process painstaking and a bit frustrating, but, as with all kit building, the sense of satisfaction when the thing worked was immense. The SWTP mainframe contained a Motorola 6800 microprocessor running at 1 MHz, Motorola's excellent MIKBUG ROM monitor, serial output and a staggering 8K of RAM.

Mass storage was provided by the SWTP AC-30 audio cassette interface and two Panasonic portable cassette recorders. During these pioneering days there were several incompatible cassette storage formats and speeds. Eventually a "standard" emerged. Known as the Kansas City format, it used the crawlingly slow speed of 300 baud (about 30 characters a second) to ease the demands on early interfacing technology and improve the shaky reliability and reproducibility of audio cassette transfers.

***Loading the SWTP 4K Basic interpreter required several minutes.***

The AC-30 used this standard, which resulted in *very* slow loading and saving to the audio cassettes. Loading the SWTP 4K Basic interpreter required several minutes, and after I had expanded to the then heady realm of 16K RAM and an 8K interpreter I frequently turned on the system, began the loading process and then left to have a sandwich.

Loading the few application programs (usually games) then available was an equally laborious process. Reliability was reasonably good, although an error in saving or loading was especially aggravating given the length of time required to try again. At least the long time intervals gave me a chance to soak up all the magazine articles in the new personal computing magazines!

Audio cassettes can store a large amount of data, since their storage capacity is limited only by the length of the cassette tape itself and the density of the data per linear distance. Unfortunately, tape storage is basically sequential nature, meaning that each bit of data must be read on the way to the desired information.

While various schemes have been devised to get to the target data more quickly, and

# IF YOU'RE WAITING FOR THE PRICE OF WORD PROCESSORS TO FALL WITHIN REASON,

Everyone expected it would happen sooner or later...with WordPro PLUS™ it already has! Now all the marvelous benefits of expensive and advanced word processing systems are available on Commodore computers, America's largest selling computer line. WordPro PLUS, when combined with the new 80 column CBM 8032, creates a word processing system comparable to virtually any other top quality word processor available—but at savings of thousands of dollars!

New, low cost computer technology is now available at a fraction of what you would expect to pay. This technology allowed Commodore to introduce the new and revolutionary CBM 8032 Computer.

WordPro PLUS turns this new CBM 8032 Computer into a sophisticated, time saving word processing tool. With WordPro PLUS, documents are displayed on the computer's screen. Editing and last minute revisions are simple and easy. No more lengthy re-typing sessions. Letters and documents are easily re-called from memory storage for editing or printing with final drafts printed perfectly at over five hundred words per minute!

Our nationwide team of professional dealers will show you how your office will benefit by using WordPro PLUS. At a price far less than you realize.

data transfer rates have been increased with the availability of improved interfaces, better recorders and greatly improved tape formulations, audio cassettes are still an intrinsically slow storage method. Combined with the general lack of random access, no serious business applications are feasible with a cassette-based system. Audio cassettes are extremely inexpensive, though, and do offer a viable entry level storage method for the beginner.

**Mini-Floppies Arrive**

My patience with cassettes wore thin almost immediately, as it seems to with almost everyone I know. At that time there wasn't much software available for the 6800 compared to the 8080 family, the S-100 bus was becoming dominant and a new storage medium was fast gaining popularity—the 5 1/4" mini-floppy disk.

This was enough for me, and I bought a system from Computer Data Services in Maryland. It was an integrated desktop unit which used the new 8085 processor

***My patience with cassettes wore thin almost immediately.***

and housed a keyboard, video monitor, 32K of high speed static RAM, S-100 motherboard and one single-density mini-floppy drive in a neat cabinet. The floppy drive was made by the then infant Micropolis, but the system used the popular North Star controller and the North Star Basic and DOS disk operating system.

North Star was really the first floppy disk system to gain wide popularity. It was (and is) reliable and affordable, and the free Basic interpreter and DOS were absolutely state-of-the-art at the time. What a difference it made. Now the 12K Basic and applications programs could be loaded in a few seconds rather than long and boring minutes. The Basic was powerful and flexible, allowing full random access.

One of my first activities was to translate a complete inventory system I had written for a time-sharing Basic, and my micro was now handling a multi-million dollar product inventory.

The mini-floppy itself is a 5 1/4" square envelope of cardboard which surrounds a circular piece of polyester coated with magnetic material. A low friction material coats the inside of the cardboard so the magnetic disk can rotate freely. The magnetic substance is an iron oxide suspended in special binders and lubricants.

Various holes are punched into the sleeve and the disk itself. The large center hole is grasped by a spindle in the drive, very much like a jukebox in its operation, while another opening allows the read/write tape head in the drive to contact the disk. Yet another hole indicates to suitably equipped drives whether the disk can be written to or is "write-protected."

There are two main methods of keeping track of which part of the disk is being read or written to. In hard sectoring, a series of either 10 or 16 holes is punched around the large center hole, while soft sectoring requires only one of these index holes. A photoelectric device in the drive senses the position of the indexing holes.

If soft sectoring is used, the one available index hole is not sufficient to provide all the positioning information necessary, so data written on the disk itself accompanies the information stored to provide location clues to the electronics which control the drive. Hard sectoring doesn't require this added overhead, but either method works fine.

The tape head actually comes into full contact with the disk surface, just as it does in an audio cassette or open reel recorder. Because of this, the disk can spin at only a few hundred RPM. Furthermore, the iron oxide coating is quite abrasive, so friction eventually wears both the tape head and the disk surface.

Several variations on the original single-sided single density mini-floppy are available, each attempting to cram more data onto the little disk. If the distance between concentric data tracks is reduced, more tracks can be accommodated. The original mini-floppies used 35 tracks, but now drives with up to 96 tracks can be found. Increasing the number of tracks requires much more precise design and construction.

Another method of increasing storage is to use both sides of the disk. A cheap and easy method of storing more data on each single disk is to carefully punch an index hole on both the top and bottom of the sleeve so when the disk is turned over the index hole will be in the right place. Commericial disks which are manufactured with the two holes already punched are also available. These "flippies" don't make any more information available "on-line" (readily accessible); they just put more data on a disk.

To get more data storage *on-line*, special drives are available which use *two* read/write heads to access each disk. These double-sided drives double the amount of information available. They are more expensive than normal single-sided drives, are a bit harder on the disks themselves, and at least when first designed were somewhat less reliable than standard drives, but recently the bugs seem to have been worked out. My North Star-type system didn't store enough for really large-scale programs, but the newer double-sided high-track mini-floppies can be used for many serious applications.

**A Step Up**

My single drive mini-disk system just couldn't keep up with my storage needs. I could have added an additional external drive, but I was becoming annoyed by the limited storage capacity of the mini-floppies and wanted to add microcomputing to the division of the major corporation I then ran.

Getting a system for my division was quite a story in itself. The mainframe computer department didn't know much about micros and viewed them as something of a threat to their control of data processing (it is a sad commentary that this attitude *still* prevails at many companies, although the situation is rapidly changing), so we sneaked the system in on a general office equipment budget.

Once it was in place, we unveiled it for our senior management and showed them all the custom programming I had done and the tremendous time savings we were achieving. Fortunately, they were pleased enough to not dismiss me and my immediate superior.

***The extra storage provided by 8" drives was wonderful.***

I purchased two Imsai VDP-80 computers, one for the company and one for myself. The VDP-80 used an 8085 processor, the excellent VIO memory-mapped video, an intelligent keyboard, a seven slot S-100 bus cardcage and 64K of dynamic RAM with a ROM monitor as well. Mass storage was provided by a Persci 277 dual 8" floppy drive. Double density was available, albeit in peculiar Imsai format which no one else used before or since. All this was housed in an attractive single enclosure, an important consideration for business use.

Persci drives are significantly faster than other 8" drives because they use a voice-coil positioner for head movement. Most drives use a stepper motor (a special motor which moves in discrete distance or revolution increments) connected to the head by either a turn screw or band actuator. The voice-coil mechanism is much like the voice coil found in a speaker; it can move to any positon based on a voltage.

The extra storage provided by 8" drives was wonderful. In single density mode each drive held about 240K of data and double density more or less doubled this, giving us about a million characters of storage on-line. This allowed storage of large program systems and lots of data as well.

The Persci drives themselves were a distinctly mixed blessing. The ones I had in my home system never gave me a bit of

# WHY THE MICROSOFT RAMCARD™ MAKES OUR SOFTCARD™ AN EVEN BETTER IDEA.

Memory — you never seem to have quite enough of it.

But if you're one of the thousands of Apple owners using the SoftCard, there's an economical new way to expand your memory dramatically.

## 16K ON A PLUG-IN CARD.

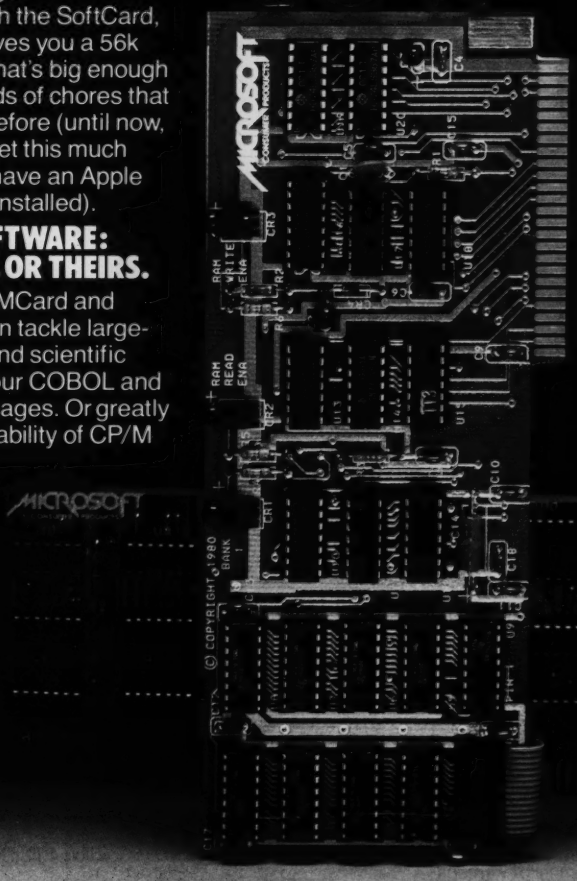
Microsoft's new RAMCard simply plugs into your Apple II,® and adds 16k bytes of dependable, buffered read/write storage.

Together with the SoftCard, the RAMCard gives you a 56k CP/M® system that's big enough to take on all kinds of chores that would never fit before (until now, the only way to get this much memory was to have an Apple Language Card installed).

## GREAT SOFTWARE: YOURS, OURS, OR THEIRS.

With the RAMCard and SoftCard, you can tackle large-scale business and scientific computing with our COBOL and FORTRAN languages. Or greatly increase the capability of CP/M applications like the Peachtree Software accounting systems. VisiCalc™ and other Apple software packages can take advantage of RAMCard too.

And RAMCard gives you the extra capacity to develop advanced programs of your own, using the SoftCard and CP/M. *Even with the RAMCard in place, you can still access your ROM BASIC and monitor routines.*



## JOIN THE SOFTCARD FAMILY.

The RAMCard is just the latest addition to the SoftCard family — a comprehensive system of hardware and software that can make your Apple more versatile and powerful than you ever imagined.

Your Microsoft dealer has all the exciting details. Visit him soon, and discover a great idea that keeps getting better.

Microsoft Consumer Products, 400 108th Ave. N.E., Suite 200, Bellevue, WA 98004. (206) 454-1315.

CIRCLE 196 ON READER SERVICE CARD

# AN ATARI 800™ HOME COMPUTER AND A FATHER'S LOVE COMBINED TO HELP CHILDREN EVERYWHERE.

Fernando Herrera became the first grand prize winner of the ATARI Software Acquisition Program (ASAP) competition because he believed in computers, his son and himself.

The story of Herrera's success began with his son's sight problems. Young Steve Herrera had been born with severe cataracts in both eyes and, naturally, his father was concerned. Herrera reasoned that the boy's learning abilities could be seriously affected by growing up in a world he could not see.

Having just purchased an ATARI 800 Home Computer, it occured to Herrera that this could be the perfect tool for testing Steve's vision. So he wrote a program simply displaying the letter "E" in various sizes.

Success! It turned out that 2-year-old Steve could see even the smaller "E's" without special lenses. Herrera was first relieved, and then intrigued when he discovered that not only could his son see the "E's," but he would happily play with the computer-generated letters for hours. So Herrera added a picture of an elephant to go with the "E," and then more letters and pictures. Thus, "My First Alphabet" was born, a unique teaching program for children two-years and older consisting of 36 high resolution pictures of letters and numbers.

Herrera submitted the program to the ATARI Program Exchange, where it became an instant best-seller. ATARI was so impressed with the outstanding design, suitability and graphic appeal of "My First Alphabet," that the program is being incorporated into the ATARI line of software.

In addition to his grand prize winnings of $25,000 in cash and an ATARI STAR trophy, Herrera also automatically receives royalties from sales of his program through the ATARI Program Exchange.

But Fernando Herrera wasn't the only software "star" that ATARI discovered. Three other ATARI STARS were awarded at the ASAP awards ceremony for software submitted to the ATARI Program Exchange and

judged by ATARI to be particularly unique and outstanding.

Ron and Lynn Marcuse of Freehold, New Jersey, teamed up to write three winning entries in the Business and Professional category for home computers: "Data Management System," "The Diskette Librarian" and "The Weekly Planner."

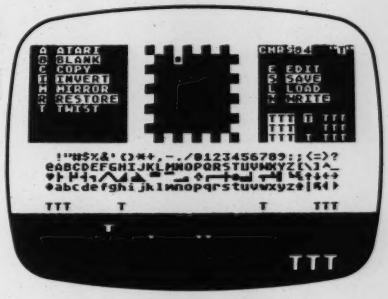
Sheldon Leeman of Oak Park, Michigan, captured an ATARI STAR for his exceptionally well-engineered "INSTEDIT" character set editor.

Greg Christensen of Anaheim, California, became our youngest ATARI STAR winner at the age of 17. Christensen designed the clever "Caverns of Mars" game program, which also will be incorporated into the ATARI product line. Greg designed the program in 1½ months after owning his ATARI Home Computer for less than a year.

Every three months, ATARI awards ATARI STARS to the writers of software programs submitted to the ATARI Software Acquisition Program and judged first, second and third place in the following categories: Consumer (including entertainment, personal interest and development); Education; Business and Professional programs for the home (personal finance and record keeping); and System Software.

Quarterly prizes consist of selected ATARI products worth up to $3,000, as well as an ATARI STAR, plus royalties from program sales through the ATARI Program Exchange. The annual grand prize is the coveted ATARI STAR trophy and $25,000 in cash.

To be eligible, your software idea must be accepted by the ATARI Software Acquisition Program. Your program can have a broad application or serve a very specific purpose.



After submittal, consultation from ATARI is available if you need personal assistance with sound, graphics, or other technical aspects of your program.

To make your job easier, ATARI provides some 20 software development tools through the ATARI Program Exchange. A list and description of the various system software is published quarterly in the ATARI Program Exchange Catalog. These tools enable you to utilize all the ATARI resources and software, including the six ATARI programming languages.

Fernando Herrera had a great idea that made him a star. ATARI would like to give you the same opportunity.

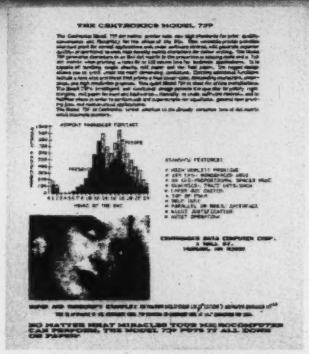
# THE CENTRONICS 739. IT'S MORE THAN YOU'D EXPECT FROM AN INEXPENSIVE DESK-TOP PRINTER.

Inexpensive doesn't have to mean incomplete, and the quiet, dependable Centronics 739 is the classic example. It's complete in capability and because it's from Centronics you can expect it to perform just like the workhorse printers that have made Centronics a leader in the business for more than a dozen years. So when you shop for a desk-top printer and compare features, here's what you can expect from a 739:

**CORRESPONDENCE QUALITY**—Clear, high density characters plus right justification and proportional spacing that produce correspondence, direct mail, and other important documents that demand a "custom" quality appearance.

**BUSINESS GRAPHICS**—What good is a printer that can't print your technical business/management information? The 739 produces a range of graphics—from bar charts and curves to illustrative material—almost anything your computer can produce.



**3-WAY PAPER HANDLING**—Cut sheets for correspondence; roll paper for day-to-day operations; fan-folded forms for normal data printout.

**DEPENDABILITY**—You depend on your printer for hard copy of timely information and that means it must operate dependably. With Centronics reputation behind the 739, reliability is a foregone conclusion. More than 350,000 Centronics printers sold worldwide is the proof.

**SERVICE**—Someday you may need it. Where do you find it? With Centronics worldwide network of service locations it's not very far. And now, there are authorized Centronics sales and service dealers, and "walk-in" service centers in an expanding number of key cities throughout the U.S.

When it comes to printers, Centronics is the leading independent printer manufacturer—chosen by computer professionals in major industry brand preference studies. So when you look for an inexpensive printer don't settle for incomplete. Choose the Centronics 739. It comes complete with a commitment—to performance, dependability and service. See it at your Centronics dealer. Or write for information.

**Centronics Data Computer Corp.**
One Wall Street, Hudson, New Hampshire 03051

trouble and worked flawlessly from the first day I got the system until I recently sold it (I am told they continue to operate perfectly for the new owner).

The CBS machine was a different story. We exchanged the drives several times, serviced and adjusted them frequently, and were never completely satisfied. With only these two machines to compare, I can't tell whether I just was lucky or the much heavier demands placed on the system in a business environment were too much for either the drives or the Imsai unit itself. Cramming all that componentry into one cabinet made the VDP-80 run rather warm, and I suspect this may have been part of the problem.

The same technologies being applied to mini-floppies are also being used to expand the storage capacity of 8" drives. Double-sided drives are becoming much more common, and the early reliability and media wear problems have been largely ironed out. A double-sided drive in double density mode can store upwards of a million characters, so these drives have great appeal to business users.

There hasn't been as much effort expended on increasing the track density of 8" units, but Persci recently announced 8" drives which can store as much as eight megabytes of data on a normal floppy disk. I haven't seen any such units myself, but they obviously would be appealing if they work as claimed and are reliable.

**The State-of-the Art**

I quickly found the limited card slots available in the VDP-80 very restricting, since I wanted to experiment with voice recognition, speech synthesis, power control, computer music and many other hobby applications. My newest system has enough capacity for this and much more.

An Imsai mainframe (chosen for the operator switches and LED indicators) was modified with the excellent Godbout 20-slot high speed actively terminated motherboard. Industrial Micro Systems (now IMS International) S-100 boards form the nucleus of the system and provide a Z-80 operating at 4 MHz, 256K of high speed RAM with parity detect (a method of detecting certain kinds of memory errors), six serial and three parallel I/O ports and a DMA 8" double density floppy disk controller. Many other S-100 boards happily share the mainframe, including Computalker speech synthesis, Heuristics speech recognition, Scitronics AC power controller, PMMI modem, Newtech music synthesizer, Digital Research of Texas sound effects generator, Strobe plotter parallel interface, Computime time-of-day clock, etc. Peripherals include an IMS WP-2000 video terminal, a Diablo 1650 KSR metal daisy wheel printer, a Teletype 300 line per minute high quality line printer, the Strobe drum plotter reviewed in the September issue of *Creative*, Anderson-Jacobson 1200 baud modem, etc.

The 8" floppy drives are from a little known company named Innotronics. Their 8" drives are absolutely marvelous devices which are essentially hand made and use many components which are far superior to those found in normal commercial drives.

For example, the drive spindle is constructed completely of precisely machined and hand polished stainless steel rather than the cheaper aluminum castings normally employed. The disk clamping mechanism uses proprietary material which is much gentler to the disk center hole than the gripping teeth on standard drives.

A filtered air positive pressure system directs heat away from the motor and electronics and keeps dust and other damaging particles away from the magnetic surface. Special circuits write-protect the data if power deteriorates, while other circuits control automatic head unload and stepper power timeouts to reduce media wear and power consumption.

***The magnitude of the difference between floppy and hard disk based systems is as great as that between cassette and floppy.***

Each drive has six status LEDs which indicate whether the drive has a disk loaded or is ready to accept a disk, when a drive is being accessed, whether reading or writing is being done and whether the drive is write-protected, either by a write-protected disk or with the write-protect switch included on each drive. My three drives are housed in an Innotronics enclosure which is built like a battleship, including a very large power supply and over-rated power switches which control the AC power to my entire system.

The drives are totally reliable, quiet and solid. The truly remarkable thing about them is that they don't cost all that much more than normal drives. For example, Innotronics markets a three-drive system which is totally compatible with the three-drive system Radio Shack sells for their TRS-80 Model II business computer and the price is exactly the same.

Why anyone wouldn't want the Innotronics is beyond me, but the company is small, selling most of their production to medical instrumentation companies and other industrial users who readily appreciate their incredibly high quality, so little if any advertising money is available and the company just isn't very well known. Everyone who sees my drives wants them, and I strongly urge anyone who wants the best to contact the company directly.

**Hard Disk**

That brings us to the latest development in mass storage, the hard disk. The hard disk offers tremendous advantages in two main areas: huge storage capacity and extremely high speed. Both of these factors make a major difference in system operation; I think it is fair to say that the magnitude of the difference between floppy and hard disk based systems is as great as that between cassette and floppy.

Many of the concepts used in floppy drives are also employed in hard disk units, only more so. The performance advantages of hard disks derive from a combination of several factors.

The major distinction between hard and floppy disk systems is that the tape head in a hard drive does *not* contact the magnetic surface. Rather than coating the oxide on a flexible substrate, a rigid aluminum disk is used. The combination of the oxide and the hard disk is extremely uniform and can rotate at much higher speeds without deviation in any direction. Most hard disk drives rotate the disk at 3600 RPM, a full order of magnitude faster than floppies. As in audio turntables, either belt drive or direct drive can be used.

The rapid rotation of the disk creates a thin layer of air immediately above the disk surface, similar to the "ground effect" noted by airplane pilots. The read/write head takes advantage of this phenomenon; it is designed to "fly" a very small distance above the actual magnetic surface, usually about 1.5 microns.

Various head designs are used, but most have actual "wings" to insure that the distance between head and magnetic coating is maintained. At the high rotation speeds used, it is imperative that the head not touch the surface to avoid gouging out a destructive track (the infamous "head crash"). There is a designated safe area for the head to land when power is removed. The narrow gap physically separates the head and the oxide but is more than close enough for the magnetic gap to read or write to the oxide surface.

It is difficult to envision how small the 1.5 micron gap really is. Almost *anything* is bigger than this. A fingerprint, human hair, dust particle or even a particle of smoke is *much* larger and would instantly clog the gap and gouge the oxide surface, resulting in loss of data. The answer is to seal the drive in a chamber into which no such contaminants can enter. IBM pioneered this method several years ago. Their prototype was designated the Model 3030 and was accordingly nicknamed the "Winchester."

The integrity of the head/surface interface, even with very high speed rotation, allows for very dense track spacing and resultant high storage capacity. Most hard

disk drives use multiple hard platters with read/write heads for both sides of most of the platters, further increasing capacity. The speed of data transfer comes mostly from the high rotational speed of the disk, which results in more data coming under the head in any given amount of time.

Hard disks first appeared with 14" platters which didn't store all that much considering the bulk and high technology used. As with other mass storage technology, tremendous advances have been made in track spacing density, accuracy of head positioning and number of magnetic changes per linear distance. Fourteen-inch drives can now store well over 100 *million* bytes of information, and a few of these monsters can be used with microcomputers. In fact, my first exposure to hard disks was an associate's 96 megabyte Ampex drive sold by IMS for use with their Series 5000 and 8000 computers. This particular drive uses a removable 16 megabyte cartridge combined with 80 megabytes of fixed, non-removable Winchester-type storage. This allows convenient backup, but more about this issue later.

The Ampex drive is huge and noisy, so much so that it had to be installed in a separate room to keep the operators sane. But it is fast and powerful and has been totally reliable to date. Interfacing it to an existing IMS 8000 was simplicity indeed; we just plugged it in, booted up the special software provided by IMS and off it went.

Hard disks are now available in both 5 1/4" and 8" platter sizes. These particular sizes are obviously chosen so that the physical dimensions of the drives can match the size of existing floppy drives so that manufacturers don't have to make as many changes to their physical configurations.

**A Word of Caution**

Both sizes are available in a variety of capacities and interfaces. Early 8" drives usually held about 10 megabytes, but now can accommodate as much as 60 megabytes or more. Similarly, 5" drives commonly hold 5 megabytes, with 10-12 megabytes now appearing as well.

A brief word of caution here: hardly a day goes by without some company announcing vastly greater storage capacity on either of the sizes. Take these pronouncements with a grain of salt. I have heard of very high storage (on the order of 40 megabytes or more on a 5 1/4" hard disk and proportionally more on 8" disks) *under laboratory conditions*. This is *not* the same thing as actually producing at reasonable yield and cost a reliable drive which can deliver such density on a day-in day-out basis. In fact, it is only rather recently that a few of the drive manufacturers have been able to deliver what has been "available" for quite a while. Don't let these inflated claims deter you from acquiring a hard disk now; many of these announcements come from start-up companies in need of financing, and the actual appearance of the drives may be many months or even years away (if ever).

Drives are available with several interfaces. One of the original interfaces was and is the SMD (storage module device) interface developed for 14" minicomputer drives. The IMS 14" drive and its Model 490 controller use this interface, as do many other systems. More recently, other standards have appeared based on Shugart and Seagate Technology specifications, and several manufacturers also offer their own designs.

In any event, by far the easiest way of adding a hard disk is to purchase a drive system produced by either the manufacturer of your system or an independent supplier who has designed his hard disk to work directly with your computer. This avoids many complexities in both hardware and software and greatly improves the chances that the hard disk system will interface painlessly and be up and running quickly.

Of course, this presupposes that your manufacturer offers such a hard disk add-on. Systems are now becoming available for several of the more popular microcomputers, especially the various TRS-80s and Apples. Some of the manufacturer systems seem rather overpriced, but the ease of interfacing may more than compensate.

Owners of sophisticated S-100 systems have a wide choice of options. Some of the system manufacturers are beginning to offer hard disk sub-systems compatible with their board sets and software, and many independent vendors offer systems claimed to be compatible with a wide range of S-100 CP/M computers. Again I would advise some caution and a great deal of research. Without mentioning any names, I am aware of several hard disk systems which *cannot* be interfaced to all S-100 systems, manufacturers' claims to the contrary. The problems generally involve different interrupt architecture, software incompatibility, conflict with boot ROM location and operation, etc.

After hearing of such difficulties, I was a bit reluctant to dive into the hard disk waters, especially since IMS did not at the time offer anything other than the large, noisy and expensive commercial 14" drives mentioned earlier (they have recently announced both 5 1/4" and 8" drives in various capacities).

My investigations led me to Micro Research, Inc. in Virginia. This company is the largest IMS dealer in the country and, unlike most retailers, maintains an extensive staff of programmers and hardware experts. They are totally familiar with the IMS 490 SMD controller and had previously interfaced it to CDC and Fujitsu high capacity Winchester drives.

**The Micro Research Sub-system**

Micro Research was offering a complete hard disk sub-system which used the BASF 24 megabyte hard disk drive. The BASF drive is made by the same company which has built such an excellent reputation in magnetic media for both computer and consumer applications. It is less well known that BASF also manufactures both floppy and hard disk drives.

A study of specifications revealed that the BASF 24-meg drive operated much faster than many of the other available 8" hard drives through use of advanced head positioning technology. I was further encouraged to learn that this drive had been available for some time and was not a new and untested experiment. My only surprise was that BASF was so low key, concentrating their marketing efforts on large OEMs rather than on the end user. The ready availability of reliable drives at a time when many other manufacturers could not deliver seemed to merit wider recognition.

The sub-system sold by Micro Research is normally installed directly in an IBM 8000 mainframe and forms a neat, professional unit. Since I have a different configuration, I acquired the drive, cables, boot ROM, power supply and software and installed it myself in a standard 8" floppy cabinet with no difficulty.

To say that I was a bit apprehensive is a massive understatement. Micro Research's documentation was straightforward, all the hardware went together perfectly and the special utilities provided by Micro Research seemed comprehensive, but here I was several hundred miles from the source with no experience with my own hard disk. Would it work, or would I be one of the pioneers with the arrows?

The incredible happened—everything worked perfectly the first time! The for-

# ADD POWER TO YOUR COMMODORE COMPUTER

**$89.95**

POWER produces a dramatic improvement in the ease of editing BASIC on Commodore's computers. POWER is a programmer's utility package (in a 4K ROM) that contains a series of new commands and utilities which are added to the Screen Editor and the BASIC Interpreter. Designed for the CBM BASIC user, POWER contains special editing, programming, and software debugging tools not found in any other microcomputer BASIC. POWER is easy to use and is sold complete with a full operator's manual written by Jim Butterfield.

POWER's special keyboard 'instant action' features and additional commands make up for, and go beyond the limitations of CBM BASIC. The added features include auto line numbering, tracing, single stepping through programs, line renumbering, and definition of keys as BASIC keywords. POWER even includes new "stick-on" keycap labels. The cursor movement keys are enhanced by the addition of auto-repeat and text searching functions are added to help ease program modification. Cursor UP and cursor DOWN produce **previous** and next lines of source code. COMPLETE BASIC program listings in memory can be displayed on the screen and scrolled in either direction. POWER is a must for every serious CBM user.

matting of the hard disk surfaces proceeded smoothly, and the Micro Research system booted up without a hitch. I was sitting at a quiet, click-free computer with more storage than I had ever dreamed possible when I had started building my first computer only a few years before.

Besides the tremendous storage capacity, the performance of the system is startling. Loading the Microsoft Basic interpreter takes about a second, compared to about five seconds with a double density floppy and ten seconds with single density floppies.

Perhaps a better indication is a typical application which is heavily dependent on disk accesses. For example, a DataStar reorganization of a certain large data file required only one-fifth the time on hard disk. The difference on other programs can be still higher, with the hard disk sometimes performing eight to ten times faster than floppies. The psychological difference is even greater; the interaction with the machine is somehow totally different. Functions which seemed obtrusively slow now are comfortable. The entire computer seems faster, smoother and more professional.

Much has been made of the backup problem with Winchester drives, since fixed drives like mine don't have any removable storage. I don't find this much of a difficulty; I back up only files I have changed onto the floppy disks. Demanding professional applications can use various backup methods, including 3M tape cartridges, nine-track reel-to-reel tape drives, video-cassettes, etc.

***I was sitting at a quiet, click-free computer with more storage than I had ever dreamed possible.***

The hard disk system has functioned perfectly since that first day. Amazingly, it has not dropped a character, complained about long hours of operation or done *anything* other than work exactly as it should. I rarely use floppies at all except as a medium of exchange to put in new software or backup changes. I occasionally use a friend's floppy-based system, and I must really watch myself to avoid making negative comments about how slow and cumbersome it seems.

I have had several conversations with both Micro Research and BASF, and have found both organizations to be extremely knowledgeable and helpful. I certainly totally recommend the hardware system I am using. Micro Research also offers a similar system using the Konan SMC-100 controller for use with non-IMS S-100 systems. Micro Research sells the complete BASF 24-megabyte sub-system for $6995 and also offers various hardware and software elements separately for very reasonable prices.

Is the hard disk for you? Each of the mass storage methods I have discussed offers increasingly more speed, storage and convenience at higher cost. Note that the increase in cost is *not* linear. The cost per kilobyte of storage for hard disk is *much* less than that for 8" floppies, which in turn are more cost efficient than 5 1/4" floppies, etc.

If you have a floppy-based system and are becoming constrained by either the storage or speed limitations of the medium, hard disks are probably the answer. Costs will come down and storage capacities will go up, but the current state-of-the-art offers tremendous advantages that can pay dividends now. □

## DISCOVER THE MTU-130
## The first affordable high performance desktop computer.

**Standard Features:**

- 6502 processor
- 80K bytes memory (address 256K bytes)
- Fiber optic light pen with 12" green screen monitor
- CODOS, UNIX-like system
- Load from disk and run 32K bytes in 2.6 seconds
- Redirectable I/O
- MTU-BASIC allows dynamic command extensions (3 sets standard)
- Function keys with CRT legends
- Digitized speech and Fourier sound generation
- 480 X 256 or 240 X 256 with 4 gray levels, 80 character lines
- Serial and parallel I/O
- Hardware for software protection

**Optional Features:**

- MC68000 second or third processor with 1M byte direct addressing
- CP/M and IBM disk read/write compatibility
- Many other options
- Larger systems available

Full standard MTU-130 system with 1M byte 8" disk: $2999. Complete system manuals (700 plus pages): $35 ppd.

Call or write to Dept. 9 for our 15 page brochure.

# The NEC Spinwriter

*Steve Leibson*

When I decided that word processing was going to be a big part of computing for my system, I started looking for an appropriate printer. Several printers had been reviewed in the computer magazines, but none seem be be ideal for word processing.

I felt that an impact printer was a must. Electrostatic and electrosensitive printers print on aluminized paper, and I really didn't want to mail my letters out on aluminum foil. Thermal printer paper fades with time and is expensive. That leaves impact printers which use plain paper and ribbons—typewriters for use with computers.

**Dot Matrix Printers**

Dot matrix impact printers are fast and inexpensive but their print quality is not really correspondence quality. These printers use a group of seven or nine wires which strike a ribbon leaving a column of dots on the paper. Five or seven columns of these dots are used to make a printed character.

Characters are printed by moving the head across the paper one column at a time. The appearance of the characters is similar to that of a CRT display because the characters have been formed in the same manner—with a matrix of dots. I felt that the appearance of the print from a dot matrix printer was not acceptable for letters.

**Correspondence Quality**

The other type of impact printer available is the "fully-formed character" printer. This type of printer is similar to a typewriter. A mechanical hammer strikes a type element, forcing it against a ribbon and leaving a mark on the paper. Fully-formed character printers offer excellent print quality. They also carry the high prices.

IBM indirectly offered one of the first fully-formed character printers for microcomputers. These were the I/O Selectrics, so named because they were designed to interface with IBM computers. Many of these printers found their way to the used equipment market. The Selectric typewriter is very common in business offices today. With the addition of a few solenoids inside, the typing element will print under computer control. There are several companies which offer conversion kits for Selectric typewriters which will transform them into printers.

The I/O Selectric offers many of the features that are desirable in word processing application. Print quality is excellent; in fact, "Selectric print quality" is the goal for which all other printers strive. There is an amazing variety of type fonts available. Changing the type font is as simple as snapping in a new print ball.

**Selectric Drawbacks**

There are only two problems with the I/O Selectric. First, it is very slow—only 15 characters per second. This might be satisfactory if you only do one or two single-page letters a day, but it's far too slow for computer listings or document writing.

Second, some of the modified Selectric typewriters have very sensitive adjustments. Heavy, continuous use in a computer printer application can cause the typewriter to go out of alignment, and the print quality suffers. The mechanism was designed for the intermittent use of humans, not the relentless pace of a computer.

Fully-formed character printers really became popular with the introduction of a new product by a new company. Diablo produced the Hytype I daisywheel printer in 1972. Instead of the well known IBM type ball, Diablo took the letters and placed them on plastic "petals" in a wheel configuration.

To select a character, the printer rotates the wheel until the desired print element is in front of the print hammer. The hammer then strikes the element, driving it into the ribbon and onto the paper. The print wheel has the appearance of a plastic flower, hence the name "daisywheel." There are two types of daisywheels sold today; plastic

Steve Leibson, 4040 Greenbriar Blvd., Boulder, CO 80303.

and metal. The metal wheels last longer but slow the printer down.

Qume introduced its daisywheel printer in 1974, and since then Qume and Diablo have held the largest share of the daisywheel printer market. Other manufacturers included: NEC Information Systems, Olivetti, Perkin-Elmer and Wang.

**Lower Cost Versions**

Recently, the price for this type of printer has been dropping rapidly. Both Xerox/Diablo and NEC have introduced lower cost versions of their original products. Pertec has introduced the Stylist 360 made in West Germany by their parent company, Triumph Adler. The Stylist 360 promises to bring the cost of full-formed character printing level with the dot matrix printers at around $1000.

**NEC Spinwriter**

The printer I decided on is the NEC Spinwriter. The Spinwriter uses a print "thimble" as a type element. Looking somewhat like a badminton shuttlecock, each petal has two characters on it. The thimble rotates and moves up and down to position the proper character in front of the impact hammer, which nestles inside the thimble. An NEC thimble is essentially a wilted daisywheel.

***The Spinwriter knows when it has reached the end of the ribbon.***

Most of the other fully-formed character printers use daisywheels, each petal of which has a single character on it. As a result of having two characters per petal, the Spinwriter has a higher print speed—a maximum of 55 characters per second. The thimble can also carry a larger number of characters, 128 as opposed to 96 for wheels.

**Basic Statistics**

The Spinwriter is housed in a die-cast aluminum case making a substantial machine. It weighs 51 lbs. (23.2 kg) and is large enough so that one person has trouble carrying it. The platen is 16" wide. A line of print may include up to 136 characters at 10 characters per inch or 163 characters at 12 characters per inch.

**Ribbons**

Three ribbons are available for the Spinwriter: nylon fabric, film, and multi-strike film. The nylon ribbon can be reused until the print is too faint to read. The film ribbon produces very crisp, beautiful print but can only be used once; when the end is reached, the ribbon is thrown away.

I usually use the multi-strike film ribbon. It produces the same high quality print as the film ribbon but lasts much longer. The reason for this is that the ribbon advances only slightly after each character is struck. Thus, each millimeter of the ribbon is reused several times. When the end of the ribbon is reached, it too is thrown away.

One of the very nice features of the Spinwriter is that it knows when it has reached the end of the ribbon. At that point, the printer will stop accepting characters from the computer and beep. It will not print again until the ribbon is changed.

If there is a handshake between the computer and the printer, no character will be lost. As soon as the ribbon is replaced and the covers closed, printing resumes where it left off.

Changing the ribbon is easy. The top cover of the Spinwriter lifts to reveal the print carriage. Two red snaps hold the ribbon cartridge. Spreading the snaps, you lift the ribbon out. A replacement ribbon snaps in. There is no threading and the operation is not messy, since you never touch the ribbon.

**Interfacing**

The Spinwriter connects to the computer through either a parallel or a serial interface. I have the serial type. The serial link can be set at 10, 15, 20, 30, 60 or 120 characters per second. Corresponding bit (baud) rates are 110, 150, 200, 300, 600 and 1200. Since the printer can print only 55 characters per second maximum, the higher data rates require a handshaking mechanism between the computer and the printer to prevent characters from being lost.

Handshaking over "standard" RS-232 connections is nonstandard. NEC has attempted to provide this capability without violating the standard by providing a signal on pin 19 of the interface connector to indicate that the printer buffer is full.

If the computer checks pin 19 before sending each character, and only transmits when the "all clear" is given, no data is lost. Pin 19 has been connected to a pin on my computer that can be read by the processor. A special printer driver, written in machine code, always checks that signal before sending a character. Those of you who do not write machine code can run the printer slower, use hardware that will perform the handshake automatically or find a software specialist to write you a program.

My neighbor also bought a Spinwriter, for his Apple. It is connected to a California Computer Systems serial interface card. This card is capable of handshaking with the printer over pin 4 of its serial connector. No special driver was added to that supplied with the interface.

The Spinwriter also supports a character handshake. When its buffer nears full, the printer will send either an ETX or XOFF (DC3) control character to the computer. Which character is sent is determined by a switch setting in the printer. This is supposed to be recognized as a request for a pause in the transmission until the printer catches up. When the buffer is empty, an ACK or XON (DC1) control character is sent to restart the transmission.

The feature of supporting multiple handshake protocols is important. Since there is no standard, being able to support many protocols in common use gives the Spinwriter a wider range of computers to talk to.

**Type Fonts**

Several type fonts are available for the Spinwriter. The latest literature lists 34 different print thimbles. Included in this list are the standard typewriter fonts Courier, Pica, Elite and Gothic. International thimbles include Kana Pica (Japan), German Elite, Canadian Bilingual, Norwegian Pica and Russian Pica.

***The NEC 5525 has full typewriter keyboard so that the printer may also be used as a typewriter.***

There are special optical character recognition fonts (OCR-A, OCR-B, Norwegian OCR B and Kana OCR B) and scientific fonts such as Technical Math/Times Roman. There are even two APL computer language thimbles.

Each print thimble costs about $20 and is rated at a minimum of 30 million impressions. I have never worn out or broken one.

Changing the print thimble is very simple. First, you pull up on the cover, exposing the print carriage. Moving a lever causes the print hammer to lift out of the way, revealing the print thimble. A soft vinyl locking bar at the base of the thimble is slid and rotated. Then the thimble simply lifts out. Replacement is equally simple; just reverse the procedure.

**Perfect Pitch**

Many of the above type fonts are available in either 10 or 12 pitch. The Spinwriter can not only print in 10 or 12 pitch but has proportional spacing as well if your software can take advantage of it.

**Using The Spinwriter**

Either a rubber friction-feed platen or a tractor feed mechanism moves paper

# NEC's new letter-quality printer gets personal with IBM.

**The Spinwriter® 3550 lets the IBM PC get down to business.**
NEC's new Spinwriter letter-quality printer is the *only* one plug-compatible with the IBM Personal Computer. So you get the business applications you've been wishing for. Letter-quality output for word and data processing. Multi-language, scientific, and technical printing. Simple forms handling. Quiet operation. And the reliability of the industry's most popular printer line.

NEC designed the new Spinwriter especially for the IBM PC. It comes complete with documentation and training materials to fit your PC user's handbook. Just plug the Spinwriter in and your PC instantly becomes more versatile and flexible.

**More than 8 forms handlers and 50 print thimbles boost PC versatility.**
NEC designed the Spinwriter's 8 modular forms handlers to accommodate a wide range of paper and document sizes and types. The easily mounted handlers let your computer print out the forms you need for data processing, word processing, graphics, accounting or other business applications.

The Spinwriter's 50 print thimbles can more than triple your PC's usefulness. They come in both constant pitch and proportional-spaced fonts, plus in foreign language, technical and scientific versions. They snap in and out in seconds, and let you print up to 203 columns on 16-inch paper. They each last for more than 30 million impressions.

**This printer's special features make everything look better on paper.**
The Spinwriter's software-invoked features include automatic proportional spacing; bidirectional, bold and shadow printing; justification; centering; underscoring; and sub/super scripting, all at speeds up to 350 words per minute.

**That big extra, Spinwriter reliability.**
The new 3550 is part of NEC's renowned Spinwriter family, the world's most popular line of letter-quality printers.

Spinwriters have the industry's best mean-time-between-failure rating, in excess of 3,000 hours. In terms of average personal computer usage, that's more than five years.

through the Spinwriter. Paper may enter either from the back or through a bottom slot. A sensor determines when paper is out and signals the computer to stop transmitting.

Usually, printing may go on unsupervised. I have only seen the paper jam when the machine was misloaded. If the ribbon or paper runs out, the Spinwriter stops and beeps to get your attention.

My Spinwriter is the Model 5525, which is programmed to accept the control sequences of a Diablo/Xerox printer. My neighbor's is the 5510 which accepts NEC control sequences. You need to know which sequences your software will generate in order to pick the correct model. Since both the NEC and Diablo printers are popular, most word processing software packages will handle both printers, but it is best to check before buying.

**Even A Keyboard**

The NEC 5525 has a full typewriter keyboard so that the printer may also be used as a typewriter. Typing on the Spinwriter takes some getting used to. The time between hitting a key and hearing the hammer strike is longer than that for an electric typewriter. It is possible to type, however; you just have to find the right pace. Initially, I did use this keyboard, but as my experience with the word processor grew, my use of the Spinwriter keyboard diminished.

While the Spinwriter is printing, the paper is obscured by the print carriage and ribbon. When no printing is being done, the ribbon drops down to show all characters printed. This is most useful in typing directly on the Spinwriter.

One of the better Spinwriter features is low susceptibility to static electricity. In fact, whenever I sit down at my computer, I discharge static electricity by touching the printer. It doesn't seem to affect either the printer or the computer. The alternative is discharging to the keyboard, which usually locks the computer up and forces me to reload the system software.

**Features**

The Spinwriter can print bi-directionally. This is somewhat faster than normal printing

# CATCH THE BEST!

"THE BEST COMPUTER SPORTS GAME."

That's the award SSI's "COMPUTER BASEBALL" received from Electronic Games magazine (a subsidiary of Video magazine) for 1982.

We appreciate the recognition, but frankly, we're not surprised. Especially when you consider what it took to be the best.

It's a computer strategy game" so thorough yet so easy to use you'd swear you're managing a live team.

It lets you enter extensive player statistics so you can create any team you like — from the neighborhood hackers to the great 1944 St. Louis Browns!

It gives you over 95 strategy options to choose from, options so complete you have to remember to warm up relief pitchers in the bullpen.

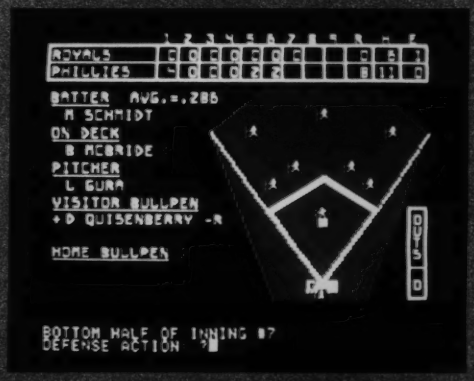
Its color Hi-Res graphics display has enough animation to give you a good feel for the flow of the game.

As a clincher, Teams Data Disks for 1980 and 1981 are available if you want to use real AL and NL teams of those seasons.

And the price? A steal at $39.95. (Data disks are sold separately from SSI for $15.00 each.)

As exciting as all this sounds, it's nothing compared to what you'll see when you get your mitts on the game at your local computer/game store. Then you'll really understand why people say Computer Baseball is what it is.

The best.



To order directly from SSI with your VISA or MC, call toll free 800-227-1617, ext. 335 (800-772-3545, ext. 335 in California). To order by mail, send your check to Strategic Simulations Inc, 465 Fairchild Drive, Suite 108, Mountain View, CA 94043.

CIRCLE 111 ON READER SERVICE CARD

where a line is printed followed by a carriage return and linefeed. Many word processor packages support this feature; it does speed up the printing.

Blank areas in the text are skipped. It can be amazing to watch the print carriage fly around while printing a table of figures. This definitely speeds up printing. Blank lines are treated in the same manner. The printer simply counts consecutive line feeds until a non-blank line is sent, and then the paper is rolled up to the proper spot.

Three methods of paper movement are available with the Spinwriter: friction-feed platen, pin-feed platen and tractor feed. The friction-feed platen is the familiar rubber roller used in typewriters. A pin-feed platen has drive pins added to the sides for perforations in paper designed to be fed. The tractor feed is an attachment that transforms the friction-feed machine into a pin-fed version. The advantage of the tractor over the pin-feed platen is that the tractor has adjustable width while the pin-feed platen does not. I have the friction-feed version with the tractor accessory, this a combination which has handled any printing job I have needed to do.

One feature of which I have not yet been able to take advantage is graphics. The Spinwriter can be programmed to move in 1/20th of an inch increments horizontally and 1/48th of an inch increments vertically. Fairly high resolution graphs are possible if you have the software to support this feature. WordStar uses this capability for printing super- and subscripts.

**Reliability**

The mean time between failures (MTBF) rating for the Spinwriter is 2000 hours, or about one year of commercial use. I do not use my printer as often as most businesses and therefore stress the printer less. The Spinwriter has never failed or missed a character. If there is a character out of position on a page, I immediately check the software or text file. You can rely on the printer that much.

***There have been very few problems with my Spinwriter.***

NEC has recently revised the 5500 family of printers by incorporating all the electronics onto a single circuit board to increase the reliability of the printer. The new printers are called the 7700 series and are now replacing the 5500 series.

**Problems**

There have been very few problems with my Spinwriter. It uses ribbons at a very high pace but I run a lot of text through it. The multi-strike film ribbons eased that problem somewhat.

Fan-fold paper has a tendency to walk across the friction-feed platen during long continuous printing, but using the tractor cures this problem.

The only feature I have found lacking in the Spinwriter is the intelligence to skip over perforations at the end of a page. My word processor is intelligent enough to do this without the printer's help, but most program listers are too dumb. They just keep printing line after line. A smart lister program is required to get a good looking listing. This happens to be a failing of most printers but not all. With the NEC's onboard microprocessor, this feature could be added.

**Conclusion**

I can recommend the Spinwriter without qualification. It produces excellent print, reliably and quickly. It is adaptable to almost any computer, micro or otherwise. For word processing applications, it is ideal. □

QS QUALITY SOFTWARE

6660 Reseda Blvd., Suite 105, Reseda, CA 91335

*More tips from the authors of Beneath Apple DOS . . .*

**Bag of Tricks™**

By Don Worth and Pieter Lechner

Now there is more from the authors of the best selling book ***Beneath Apple DOS***—four comprehensive utility programs on diskette and **over 100 more pages** of valuable information about the Apple II's disk operating system.

BAG OF TRICKS is useful to beginners and experienced programmers alike. It includes many "hand holding" tutorials that assist you in repairing damaged diskettes and allow you to change sector ordering, reconstruct blown catalogs, etc. etc. etc. At the low price of $39.95, BAG OF TRICKS is one of the best software values ever.

The four programs and their functions are:

1. TRAX dumps and examines a raw track, either 13-sector or 16-sector, displays the internal Apple diskette formatting information, and flags exceptions to standard formats.
2. INIT will reformat one or more tracks, attempting to preserve the contents of undamaged sectors. It also allows you to change sector order. This can cut disk access times by 40% or more!
3. ZAP is a sector editor like no other! More than 50 commands are available to assist you to locate, compare, change, or print the data on your diskettes. ZAP is even programmable! Using powerful macros, it is possible to transfer and compare DOS, CP/M, or PASCAL files.
4. FIXCAT automates the process of repairing a damaged diskette catalog. It operates with or without user intervention, locating "lost" files and rebuilding the catalog—from scratch if necessary! DOS removal and VTOC repair are also possible.

Requires Apple II or Apple II Plus with 48K RAM and one disk drive **$39.95**

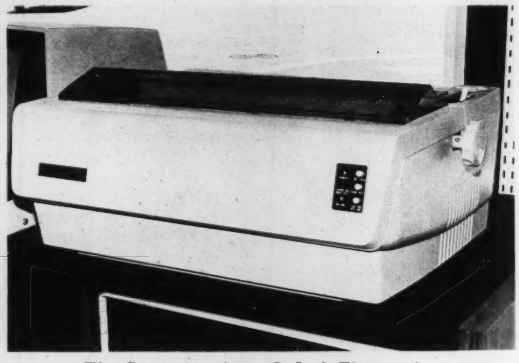
# Reach for a Star



*The Starwriter from C. Itoh Electronics.*

Gordon Mc Comb

Very few computer systems can be considered complete without a printer. But no one would blame you if you didn't have one or were a little shy about investing your hard earned cash in one. In many cases, a good printer can be more expensive than the computer itself.

At least, that's the way it used to be. Anyone who wanted good typewriter quality printing had to either use a typewriter or invest $3000 or so in a daisy wheel printer. The Starwriter from C. Itoh Electronics changes all that. For well under $2000, you get a well-built, reliable daisy-wheel printer that is easy to use and has many "expensive" features thrown in for free.

**Hooking Up**

There are actually two models of the Starwriter. One is called the Starwriter (good name) and the other Starwriter II. The only real difference between the two is speed. Starwriter II prints out at a fast 45 characters per second and costs about $300 more than the Starwriter, which prints at 25 characters per second.

You can connect the printer to your computer by either the standard Centronics-style parallel interface connection or by an RS-232C serial interface. The serial costs an additional $100.

Most systems will run without any internal modifications or changes. But there are some DIP (dual in-line package) switches located inside the printer that will allow greater flexibility and control with your particular system. They have been pre-set at the factory to interface with most personal computers. You or your dealer can readjust the machine to fit your needs.

The on/off switch is located inconveniently in the back. Therefore, if you need to turn your printer on and off manually (as opposed to a central power supply box), you can't place the machine too close to a wall or inside a cabinet—unless you have very small hands.

Other switches include on/off-line, paper advance and line advance. These are located right on the front panel along with three LED indicators for power on, paper/ribbon out and on-line.

When you activate the machine, the print head travels over to its "home" position at the left side of the carriage and awaits the proper commands from your computer. The unit is automatically put on-line, ready to accept data.

Depressing the page advance button and turning the machine on results in a test print out. This is good if you are troubleshooting the printer or simply want to see the character set on the print wheel.

**Getting Ready**

The Starwriter has a friction feed roller so you can insert either continuous or single sheet paper. With the optional tractor mechanism, you can use tractor-fed forms. The tractor is especially useful when you want to print labels or bills which must be positioned exactly on the page. The tractor-feed mechanism is not included in the price of the basic machine, so if you are comparing prices, remember to take that into consideration.

The printer is capable of both 10 and 12 pitch (pica and elite) as well as proportional spacing. If you select proportional spacing, the printer will automatically compensate for the varying widths of letters—i's will take less space than w's or m's. Printing is bi-directional in 10 and 12 pitch mode, uni-directional in proportional.

The Starwriter uses print wheels and ribbons that are Diablo-compatible, so you will never be far from a supplier if you find yourself out of ink or in need of another wheel. You insert the wheel by first removing the ribbon and cocking the print mechanism back. The wheel easily snaps into place, but it is not hard to misalign it, which will cause erratic printing and possible wheel damage.

Snap the ribbon into place, and once you've got the front cover back on, you can start work.

Gordon Mc Comb, 410 Escondido Ave., Vista, CA 92083.

Whatever your record keeping needs, Data Factory will help you.

# Do it your way!

The new version of Data Factory is COMPLETELY ADAPTABLE. It includes a customized data entry system that allows you to position information anywhere on the screen. The flexible print-out routine frees you from formatting constraints giving you pin point control.

A new Master Search routine will locate records by any criteria you wish... from one value to another, date-to-date, by the beginning/ending of a field or within it, greater than, less than, equal to, or any combination of the above. The sequence can be stored for future use.

The new sort feature flashes through 1,000 fields in less than six seconds. Works with two on-line disks for tremendous storage capacity. The expanded math routine has the most advanced capabilities of any Apple data base yet, use it across all fields and store the answers on data disks. You may still add, delete, or change fields without re-entering information. Change up to 10,000 fields of data at one time.

Anyone can use the power and flexibility of the new Data Factory. Prompts guide you throughout. You don't have to change the way you do business, it adapts to you. The package contains two masters and two back-up disks. The Extended Warranty, included in the price, replaces blown disks and provides updated versions when available. Available now, at $300, see it at your Micro Lab dealer, today. You'll need Apple II-48K.

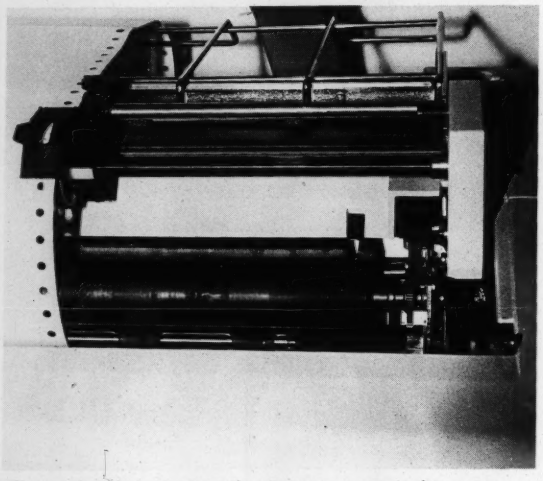
*To change the print wheel, ribbon cartridge or character space setting, the entire front cover must be lifted off. A quick glance inside the machine shows it is well constructed.*



*The optional tractor mechanism can accomodate paper up to 15 1/2" wide and is made by TEC.*

**Printing Out**

The Starwriter is capable of bidirectional, logic-seeking printing. The logic-seeking function tells the print head to take the shortest route to the next print position. In this way, time is not wasted as the head returns "home," then goes back to a tab position to resume printing.

Boldface and underlined characters are standard with the Starwriter, but, of course, your software must be able to access these features. The manual gives some sketchy information on special function codes. When in doubt, consult the dealer.

Because the printing platen is stepless, the Starwriter can produce intricate graphics. Pictures can be drawn with any of the 96 characters found on the print wheel.

The manual supplied with the machine covers the operation and programming details briefly. It has a very nice section on unpacking the machine from the box, but nothing on troubleshooting and very little on advanced operation. It is clearly written by computer engineers for computer engineers. It's not that it's hard to understand—it's just confusing.

The Starwriter is not the quietest of printers, but it is not the noisiest, either. The plastic cover helps a bit, but it would be a good idea to locate the printer on an outside wall if you are into late-night work.

The plastic cover is very susceptible to scratching and breaking. The front of the cover scrapes against the inside lip of the well opening and can create an unsightly smudge across its entire length. But that won't affect the printing.

A fellow Starwriter user of my acquaintance is still in a bad mood after breaking the entire plastic cover off. When open, it hangs over the front of the machine, and any reaching over or careless movements will take it off in a flash.

There is no user adjustment for the hammer strike mechanism. There is no way to lighten or darken the print. I have found that although I was able to match the type fonts of my IBM Selectric and with that of the printer, the Starwriter impression is much darker, and matching is impossible. Other printers, like the Radio Shack Daisy Wheel can be adjusted and matched perfectly.

***After printing about ten pages with an imitation Diablo multi-strike ribbon, it suddenly flew off its bed.***

Fitting the print wheel in place, as I mentioned, is not difficult; getting it back off is the hard part. It is somewhat difficult to remove the wheel, and since it is plastic (the Starwriter will not accept the metal variety), it is easy to slip and snap off one of the petals. I have found that gentle talk, and an even gentler, but persistent tug works quite well.

**Disadvantages**

There are two problems that I understand are not common to all Starwriters, but my machine has both problems.

One is that many of the capital letters are printed slightly lower than the rest of the text. There is a small adjustment that a qualified dealer or service center should be able to make to correct the problem. The capital and lower case letters are on opposite sides of the wheel. If the wheel or spindle is slightly off, the type may be uneven.

The other problem apparently occurs less frequently, but is equally disturbing. The ribbons come in either cloth or a mylar type multi-strike version, which is heavier and bulkier. After printing about ten pages with an imitation Diablo multi-strike ribbon, it suddenly flew off its bed. I placed it back on. It did it again. And again. Finally, I secured the ribbon in place with a rubber band.

I contacted a major distributor of the Starwriter and he too had witnessed this behavior, also with an imitation Diablo ribbon. In any case, the problem was corrected by replacing the springs that hold the clips that hold down the ribbon. This service was performed free of charge, since the machine was still under the 90-day parts and labor warranty.

These two idiosyncrasies aside, the C. Itoh Starwriter and Starwriter II are definitely well worth the money. The Starwriter is easy to use, reliable and uses easy to find Diablo-compatible supplies. Best of all, it has features found only in more expensive printers.

C. Itoh Electronics, Inc., 5301 Beethoven St., Los Angeles, CA 90066. □

# II for Apple II

## PLUS VERSAbox FOR EVERYBODY

### VERSAbox

The only intelligent SPOOLER/BUFFER with an optional REAL TIME CLOCK interface/display. For use with all Centronics parallel and RS-232C INPUT/OUTPUT interfaces.

VERSAbox's high-speed input combined with up to 60K buffer (more with character compression) frees up your computer from the slow job of printing. Modems and other compatible devices can also be buffered. Multiple software-selectable outputs permit you to choose between two or more VERSAbox outputs or use them simultaneously. You can buffer multiple inputs simultaneously too.

Add the optional REAL TIME CLOCK to VERSAbox and you get a six digit LED numeric time display. Your computer can read the time via the RS-232C port. Another useful option is the SWITCHED 120V SOCKET that can turn external devices on and off by clock control.

VERSAbox is supplied in an attractive, compact 11" wide, 8" deep, 3" high cabinet. Interface cables are available from your dealer or Prometheus. SPECIAL OFFER for Apple II owners: Buy a VERSAbox this month and you will receive a free parallel interface and cable.

VERSAbox, standard model with Centronics parallel INPUT/OUTPUT only and 16K buffer ..... **$249.00**

VERSAbox, with both Centronics parallel and RS-232C INPUT/OUTPUT and 16K buffer ..... **$299.00**

REAL TIME CLOCK option with DISPLAY ..... add **$150.00**

SWITCHED 120V OUTLET option ..... add **$50.00**

Additional 16K BUFFER MEMORY KITS each ..... add **$50.00**

### I. VERSAcard

Four cards on one for Apple II. (1) Serial Input/Output Interface, (2) Parallel Output Interface, (3) Precision Clock Calendar, and (4) BSR Control. All on one card with TRUE SIMULTANEOUS OPERATION.

Before you buy Mountain Computer CPS or any other multifunction card, ask these questions:

Can I use CP/M and Apple Pascal with NO disk modification?

Does it have interrupts?

Will I be able to read and set the year?

Does it have BSR control?

Can I use DB Master? Ascii Express? VISI Dex? Easy Writer? WORDSTAR? Z-TERM PRO? VISITERM? . . . . other software packages?

If the answer is YES to all of the above, then you're talking about VERSAcard and ONLY VERSAcard. And, the list price has been reduced by $50 to **$199.00**

SPECIAL OFFER: Buy a VERSAcard and we'll sell you GRAFTRIX, a sophisticated screen dump graphics package, with $25 off the regular list price of $65 for only **$40.00.**

### II. AUTO-DOC

An automatic diagnostics system for your Apple II computer. Get a complete check of your critical Apple hardware EVERY time you power-up.

AUTO-DOC saves TIME, ENERGY, and MONEY by identifying problems in your Apple before they make themselves known by system failures. And, you don't have to remember to insert a disk. DOC automatically identifies system problems before you run your programs by doing extensive system diagnostics. If DOC finds a failure, it indicates the problem area and, in some cases, the specific chip or component that's responsible.

DOC includes a memory test, processor test, ROM test, and more. In addition, extensive disk based diagnostics are included for further testing and subsystem checks for many popular peripheral cards.

AUTO-DOC is simple and easy to install. And once installed, DOC will always be there working AUTOMATICALLY everytime you power-up.

Can you afford to be without AUTO-DOC?

AUTO-DOC List Price **$99.00**

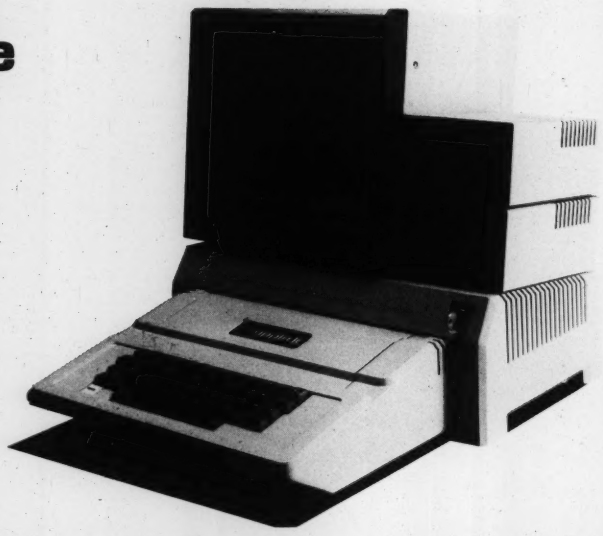
## Station II by Trace Systems

# Put One Over On Your Apple

*David H. Ahl*



The Apple II has been on the market for several years and looks likely to remain a strong seller for several years to come. Given this stability, Apple and several other hardware manufacturers are marketing a broad array of plug-in boards for the computer. Today, it is rare for anyone who has had an Apple for more than six months not to have at least one plug-in board added on to it. More active users have three or four boards and some people have the entire computer populated with boards while others sit on the sidelines waiting their turn at being plugged in.

I was suffering from the "too many boards" problem and my Apple was suffering from overheating. Not often, but just enough to be mildly annoying. Hence, I was thinking about a fan. I liked the looks of the Super Fan II from R.H. Electronics which clamps on the left side of the Apple and matches the Apple case in appearance although the one from the Sup-R people that fits inside on the right rear also had appeal.

At the same time, I was thinking, "Gee, maybe I ought to get one of the housings that holds the disk drives and monitor since I am always changing boards around and forever moving the disk drives off the top and plugging and unplugging things."

So it was with more than passing interest that I looked over the Station II from Trace Systems when I was at the Silicon Gulch Games Faire last November. Here is an attractive unit that fits over the back of the Apple on which both the monitor and one or two disk drives can perch. It has an optional fan built in the left side of the unit, and it seemed to have several other nice features.

Station II is a molded, high impact plastic case identical in color and style to the Apple II. It fits over the rear of the Apple and projects out to each side by about two inches. Hence, it has more than enough room on top for a nine or twelve inch monitor and one or two disk drives (stacked).

Station II is equipped with three power outlets, so that cords and cables that normally clutter the area between the Apple and monitor and a power outlet are tucked neatly inside the back of the unit.

The photographs in the Station II instruction manual which show how this is done are wonderful in their clarity and neatness. Unfortunately the reality of folding up real power cords is not nearly so neat, tidy and easily done.

Also, although Station II boasts of three power outlets, one of them is used by the optional fan so that the Apple and monitor are the only thing that may be plugged in. Unfortunately, I was hoping to control the amplifier I use for the ALF music synthesis boards from the Station II, but this was not possible.

Although security was not a factor in my installation, Station II is designed to provide security in environments where it is needed. Station II may be bolted with four bolts to a desk, the Apple computer put inside and a keylock turned so that a clamp grips one of the ventilation slots of the Apple and prevents it from being moved. This same keylock turns on the power to the system. My only minor objection to this arrangement is that the Apple must frequently be jiggled back and forth in order for the clamp lock to be either opened or closed. However, in an environment where security is a factor, this objection is minor indeed.

A very nice feature of Station II is the line voltage surge suppressor which could potentially prevent the loss of a program due to a power surge. Station II also lets the user move the Apple in or out and choose the distance from keyboard to monitor that's right for him or her. I also found it convenient that Station II positions the monitor at about a twelve degree angle to the flat surface which is about right for an adult although not so good for a small child (a cushion will solve that problem, however).

The Station II literature boasts that "Your Apple is free to slide in and out which allows the user to get inside his Apple without unstacking and restacking peripherals." Strictly speaking, this is true. However, those cords that I went to so much trouble to arrange reasonably neatly when I placed the Station II over my Apple became a jumble of wire worms after pulling the Apple in and out a few times to exchange peripherals.

I could have lived with this, however the bigger problem was that several peripherals such as the ALF music boards and Aurora Videodisc interface have several cables which had to be snaked through the back of the Apple and through the underside of Station II to be hooked up to other devices. Clearly Station II was not designed to have boards such as these interchanged with any regularity. Indeed, if it were bolted down it would be almost impossible to change this kind of board and cable arrangement.

I don't wish to leave a negative impression. I like Station II. I find the absence of cords all over my work area a definite positive feature and the built-in fan has completely eliminated any overheating problems that I had previously.

Station II is available through computer retailers for approximately $129; the fan costs an additional $49. For more information, contact Trace Systems, 1928 Old Middlefield Way, Mountain View CA 94043. (415) 964-3115. □

# MAGIC?

# You Bet.

**MAGIC WINDOW**[TM] transforms your Apple Computer into a sophisticated word processor unlike any other.

Streamlined to meet all professional needs yet be easy to understand and operate, MAGIC WINDOW can be used by anyone in minutes.

Simulating a standard typewriter, everyone has immediate rapport with the system as no special training is required. All complexities of operation are eliminated by explicit instructions and a unique menu system that simplifies the powerful functions available.

MAGIC WINDOW solves the Apple's display problem without expensive hardware additions. Using your video screen as a "window", you view what you type from any position selected with a single keystroke. Centering, justifying and correcting can all be done on the screen before printing. Eliminating your problems swiftly, MAGIC WINDOW is the finest word processor designed for the Apple.

**MAGIC WORDS**[TM] uses the same positive features of MAGIC WINDOW: menu selection of options, simplicity of use, accuracy and speed.

Discovering errors after it is too late is not only embarrassing and unprofessional, but costly. Don't you wish you could avoid mistakes altogether?

You can. With MAGIC WORDS, an entire page is proofread for spelling errors and typos in seconds. When found, you see the words in context on the screen or print out, and are given choices of how to handle each.

MAGIC WORDS main dictionary is more than ample with 14,000 words (twice as many as the average person). You can also add more words, specialized terms, or clients' names to the vocabulary of the "user" dictionary, editing them with MAGIC WINDOW.

If perfection is what you're striving for, let MAGIC WORDS correct documents composed on MAGIC WINDOW before printing.

**MAGIC MAILER**[TM] is a mailing list merge system intended to be used with MAGIC WINDOW.

With both systems you can print as many personalized letters, invoices, labels as you elect with minimal keystrokes.

Create your mailing list for MAGIC MAILER, merge it with the documents filed in MAGIC WINDOW and instantaneously print customized documents with individual data inserted where you've specified it.

These three programs used together form the most complete and professional word processing system on the market today.

This system is so simple and straightforward to learn it is being used by universities to teach electronic word processing.

The time and money you'll save IS magic.

# The Atari Word Processors

*Phillip Good*

Word processing may not be the application of choice for the Atari 800 Home Computer, but there are many times when an Atari user would like to set words on paper in a tidy fashion.

This goal is attainable using any of the five programs described here. Unfortunately none of them offers all the features of the best of the word processors available for the Apple or the TRS-80.

Let's have a look at what is available, and perhaps you will discover the one that is best for you.

**An Unfriendly Keyboard**

The looks of the Atari 800 are deceptive. Superficially, the keyboard resembles that of the IBM Selectric, but the right shift key is one silly little centimeter to the right of where an experienced typist expects to find it.

The quotation mark, used constantly in Basic programs, is over the 2 rather than next to the return key. The clear screen key is where the underline should be and is too close to the end parenthesis ")" for comfort.

Corrections are made with a full-screen editor using the cursor almost as if it were a correcting pencil. But the cursor control keys on the Atari are all in shift mode; you must depress the control key each time you use the cursor.

On the other hand, the Atari does offer upper/lower case capability without hardware assists, and, unlike the Apple, the shift key is fully functional as delivered.

Like the Apple, the Atari 800 offers only a 40-column display. Unlike the Apple, no one has yet marketed an 80-column adapter. And none of the three Atari full-screen word processors makes use of the Atari high-resolution graphics to generate a 60+ column character set.

**Bare-Bones Word Processors**

For less than $20, either of two bare-bones word processors will allow you to use the Atari to create and edit messages for an electronic bulletin board, display them on the monitor or TV screen, store and retrieve text and programs, and produce a hard copy.

With *Letter Writer*, $19 from CE Software, you use the insert key to insert text, and the delete key to delete text errors. The program provides only two editing features of its own to let you indent paragraphs and skip lines.

The *Letter Writer* printer formatter allows you to set the line length (though not the left margin), insert new pages as required, and right justify your text. The program will operate with any parallel connected printer. I used *Letter Writer*, a $30 interface cable from Mactronics Inc., and a C. Itoh printer to prepare some reports recently.

But *Letter Writer* is still not a best buy. That honor goes to *Bob's Mini Word Processor*, which costs just $15 from Santa Cruz Educational Software.

The *Mini-Processor* allows you to create files, save or load them, modify them, and create hard copy. While editing, you have full control over the tab, delete, back space, clear, insert, and cursor control keys. But you can also advance through the text a page at a time or move with a single command to the beginning or end of the text. You may interchange "pages" of text, though you cannot cut and paste any section smaller than a page.

The *Mini-Processor* works with serial but not parallel printers, using an Atari 850 interface.

**Inadequate Documentation**

Ideally, any software package should include four types of documentation:

- Tutorials to get you started; the more examples and the more demonstration files, the better.
- A quick-reference manual including a detachable command reference card to keep near the keyboard.
- A comprehensive reference manual.
- Application notes for programmers.

Phillip Good is the author of *Choosing a Desk-Top Word Processor*, $21.95, from Information Research, 10367 Paw Paw Lake Dr., Mattawan, MI 49071.

## Word Processors, continued...

Atari's *Word Processor* has all four, but the tutorials and reference manual are completely incomprehensible. The combined manuals are more cumbersome (and bulky) than any of the more than sixty manuals I recently reviewed. Figure 1 shows instructions for deleting a block of text from pages 31-32 of the Atari manual.

*Figure 1.*

Method One: Menus

A block of text can be deleted using the menu tree.

1. Repeat steps 1-4 under "Delete Next Character".
2. Recall the page that contains the text to be deleted.
3. Type E in response to the next menu prompt.
4. Press return.
5. Type T in response to the next menu prompt.
6. Press return.
7. Type S in response to the next question.
8. Press return.
9. Position cursor at the beginning of the block to be deleted.
10. Type G and press return. A right parenthesis in inverse video will appear in column one and a blank line will be inserted.
11. Position cursor after the last line of text to be deleted.
12. Type D in response to the next question.

***The Atari Word Processor has the best text-editor of the three full-screen word processors.***

See, it's as easy as a,b,c,d,e,f,g,h,i,j,k,l. Don't ask how to move a block of text; that takes 28 steps (Method 1). Whoever wrote this Atari manual (I think it was a committee) also wrote the mainframe manuals that drove us to using personal computers in the first place.

All three word processors—Atari's, *Letter Perfect*, and *Text Wizard*—do provide detachable quick-reference cards. *Text Wizard* has only one example, which you must type in yourself, and no demonstration files. The *Text Wizard* tutorials also serve as the comprehensive reference section—or is it vice versa? My manual was missing a page—the page that told how to save the file I had just created.

*Letter Perfect* has no demonstration files and only one example—a form letter. You must buy a second LJK product for another $150 to make use of the example.

**Text-Editors**

The Atari *Word Processor* has the best text-editor of the three full-screen word processors, if you can figure out how to use it. You can display text on the screen as it will appear in print. You can work with files much, much larger than memory. And you will automatically save what you have edited as you move from page to page. (Unfortunately, you will destroy the old text as you do so; back-up is not automatic.)

*Text Wizard* is the only one of the three which lets you edit programs as well as text, enter insert mode for the rapid insertion of many paragraphs of text, and move or copy entire blocks of text simply and rapidly.

*Letter Perfect* is the only one of the three to provide a block delete safeguard, and to let the user set tabs with a cursor.

There is an extensive list of simple editing functions that can't be done with any of the three including:

- Print one file while editing another.
- Display a second file.
- Automatically back-up on file-save.
- Insert key phrases with a single keystroke.
- Use wild cards in a search and replace command.

**Printer-Formatters**

You will probably have to settle for less than letter quality with an Atari. None of

# More Workhorse Programs for your computer to play with!

# Announcing the Printing Breakthrough of the Century: Smith-Corona® TP-1™ Text Printer

Mr. Robert Jenkins, Pres.
Maxillion Data Corp.
4345 Weston Avenue
Mingston, ME 54687
Dear Mr. Jenkins,
Thank you for your interest in our new data
Printer. The enclosed specifications will
give you all of the technical information
you requested, but far more important will
be the specific applications to which the
printer will be put.
SMITH-CORONA TP-1

- Low Cost Daisy Wheel Printer

**$845.00**

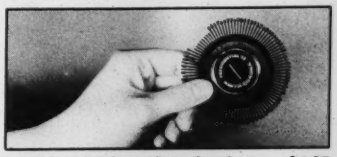
- Microprocessor Electronics
- Serial or Parallel Interface
- Simple, Reliable Mechanism

## ACT NOW: Limited Supply, Low, Low Cost

**Smith Corona,** one of the largest manufacturers of small printers in the world, gives a whole new perspective to printing with their electronic text printer—**TP-1.** The **TP-1** is a microprocessor controlled, high quality **daisy wheel printer.** It produces perfectly formed, executive quality printouts at the speed of 120 words per minute. Typewriter quality printing at dot matrix prices.

Simple, durable and dependable, **TP-1** may be used with word processing systems, microcomputers and most small business systems. Compact and attractively styled, the **TP-1** blends well with any setting.

Now, all your letters, documents forms and reports can have the crisp, professional look you demand—for business or personal use—at an affordable price. **TP-1,** the electronic text printer.



Additional daisy print wheels . . . . .$4.95

Additional ribbons . . . . . .$2.95

Don't delay. Order your **TP-1** TODAY at the low price of **$845.**

## Word Processors, continued...

the full-screen Atari word processors reviewed here supports the special features of a Qume or a Diablo. Atari owners must content themselves with one of two dot matrix printers—the Atari 825 (the Centronics 737 in disguise) or an Epson MX-80. The Epson is by far the better buy, even though it will not support underlining, superscripts, or subscripts.

You can't alter the number of lines per inch with any of the three full-screen word processors. You are limited to a one-line heading. You can't use soft or phantom hyphens; that means you will need to spend time printing and reformatting until you get it right. You will spend less time with the Atari word processor perhaps, because it lets you view your material on the screen just as it will appear on the printer. But the screen display is so inefficient and time-consuming, you may find it faster to use the print and guess method of *Text Wizard* or *Letter Perfect*.

None of the three lets you interrupt and resume printing, whether to answer the telephone or to pause for text entry from the keyboard. None of the three has mail-merge capability. You can get mail-merge capability for *Letter Perfect* by purchasing LJK's *Data Manager*. A mail merge option for *Text Wizard* is in the works.

### A Lost Cause?

I don't think the Atari is a lost cause. With very little programming effort, one can correct its keyboard deficiencies. The cursor control keys can be reprogrammed for lower case use. This has already been done by Eastern House Software in their *Atari Monkey Wrench*. The Atari high resolution graphics can be used to create a 60+ column display without hardware assists. Both of the bare-bones word processors already support letter quality printers; there is no reason the more expensive full-screen word processors cannot provide the same support. □

### Vendor's List

**An Introduction To Microcomputers: Volume 0– The Beginner's Book, Third Edition by Adam Osborne and David Bunnell**

One of our most popular titles,Volume 0 has been expanded and revised to include new sections on software and communications. Written for the complete novice, this book introduces the construction and operation of microcomputers. *Paper $7.95.*

**6502 Assembly Language Subroutines by Lance Leventhal and Winthrop Saville**

This book includes over 50 indispensible, ready-to-use subroutines. A boon to every 6502 programmer, it will save hours of programming time. Includes array, bit and string manipulation, sorting and searching operations, much more. *Paper $12.99*

**Assembly Language Programming for the Apple II™ by Robert Mottola**

This comprehensive, easy to understand introduction provides solid groundwork for getting started in assembly language programming on the Apple II. Many subroutines written in assembly language are provided, and most explanations are shown with equivalent examples in BASIC. *Paper $12.95.*

**Discover FORTH: Learning And Programming the FORTH Language by Thom Hogan**

Using a friendly approach, the author explains the history and uses of FORTH, as well as how to program to an intermediate level. Includes notes on logical extensions and alterations to the current standard FORTH syntax. *Paper $14.95.*

**Your Atari® Computer: A Guide to Atari® 400/800™ Personal computers by Lon Poole with Martin McNiff and Steven Cook**

*Your Atari® Computer* provides invaluable reference material for Atari® home computer users. This "how-to" guide written for the novice covers all the common external devices, including disk drives and printers. The reader can also learn to program in Atari® BASIC. *Paper $15.00.*

**Trade Secrets: How to Protect Your Ideas and Assets by James Pooley**

Attorney James Polley provides legal advice on a "hot" topic: who owns your ideas in today's business world. Employers can learn to tighten company security systems and protect their intellectual assets. Employees can become familiar with their rights to take "commercial" ideas to new jobs or start competing businesses without being sued. *Cloth $19.95.*

**A User Guide to the UNIX™ System by Rebecca Thomas and Jean Yates**

Designed to ease the novice through the difficult learning stages, this volume is also an excellent reference for those already familiar with the UNIX™ operating system. Computer-side tutorials teach forty basic commands plus there's a list of UNIX™ system resources, and a bibilography for further study. *Paper $15.99.*

**VisiCalc®: Home and Office Companion by David M. Castlewitz and Lawrence Chisausky with Patricia Kronberg. Illustrated by L. D. Chukman**

Contains 50 models that can be used immediately for personal and business applications. Provides models for loans and investments, advertising and sales, inventory control, personnel, household aids and more. Designed to accomodate most micros and every version of the VisiCalc® program. *Paper $15.99.*

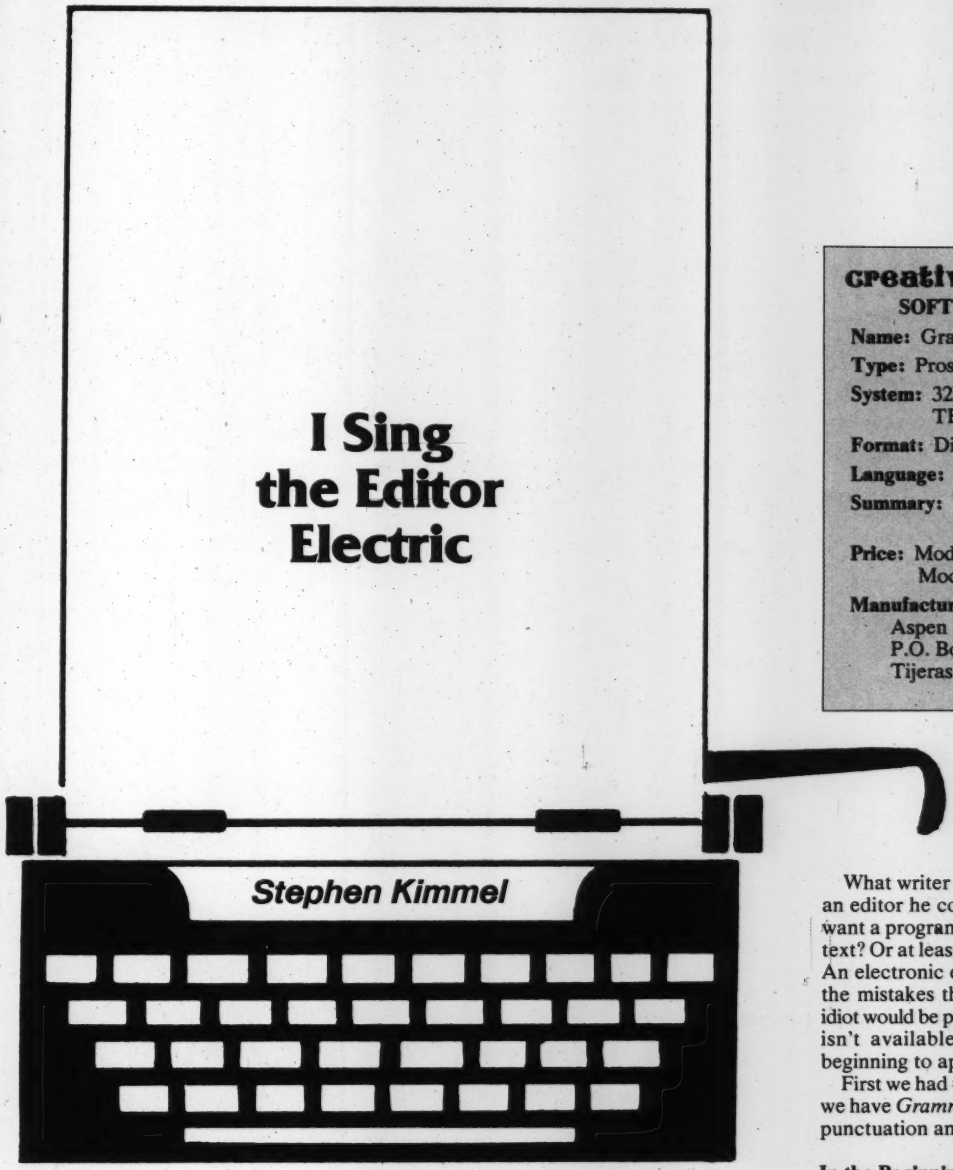
# I Sing the Editor Electric



**creative computing**
**SOFTWARE PROFILE**

**Name:** Grammatik

**Type:** Prose editor

**System:** 32K Model I, II or III TRS-80, Disk drive

**Format:** Disk

**Language:** Machine language

**Summary:** Useful addition to word processing software

**Price:** Model I-$49, Model II-$99, Model III-$59

**Manufacturer:**
Aspen Software Co.
P.O. Box 339
Tijeras, NM 87059

Since I started reviewing software back near the dawn of time, I have seen very few programs that I thought everyone should have. I have seen many programs that were just plain bad and many programs that struggled to be adequate. I have seen several programs that were good and a few programs that I thought were extremely good. I don't get excited about many programs. The last one was *Scripsit*.

I am excited about *Grammatik*.

A short time ago (March '82) I did an article reviewing spelling checkers. I said that the proofreaders were of minimal value. After all they merely tell you which words to look up in the dictionary. Alas, spelling is only the beginning of the story. Even if all my words were spelled correctly I could still appear an idiot with my limp word choice, bad grammar, and terrible typing skills. So, while spelling is important, what I really need is something that will take care of all those other things.

What writer wouldn't give anything for an editor he could turn off? Who doesn't want a program that will turn out brilliant text? Or at least words the editor will buy? An electronic editor who would catch all the mistakes that make you look like an idiot would be perfect. Sigh. Such a program isn't available yet but the pieces are beginning to appear.

First we had the spelling checkers. Now we have *Grammatik* to check style, usage, punctuation and a little bit of grammar.

**In the Beginning**

Bruce Wampler, the author of *Proofreader*, sits down one day and says to himself, "Self, why can't I do the same thing for grammar and style?"

"The answer is obvious," self says to Bruce, "spelling is a piece of cake compared to checking grammar."

"Yeah, but Bell Labs is doing it with the Writer's Workbench."

"Bell Labs has a Megalith 5000 computer and 800 computer scientists working for them."

Dr. Wampler, however, is undeterred, and after long hours of labor brings forth

Stephen Kimmel, 4756 S. Irvington Place, Tulsa, OK 74135.

PROOFREADER™
The Aspen Software Company Spelling Checker.
+
GRAMMATIK™
Beyond Spelling Checking

THE ONLY COMPLETE PROOFREADING PACKAGE

FOR ALL CP/M, MS-DOS, AND TRS-80 WORD PROCESSORS

We'll match Proofreader with any other spelling checker on the market. It has a big 38,000 word expandable dictionary, and can check even your largest documents in under four minutes. Proofreader looks up every word, and does not use less accurate root word analysis like some others. Full interactive correction is standard on CP/M and TRS-80 Model II systems, and is a low cost option for the TRS-80 Model I/III.

Spelling checking alone is not enough! No one else has anything like Grammatik! It analyzes your document for common typos, punctuation errors, misused phrases, and poor writing style. Grammatik is receiving rave reviews from both critics and users. Bob Louden in InfoWorld (12/7/81): "Grammatik is a surprisingly fast and easy tool for analyzing writing style and punctuation. If you are currently doing original writing on a word processor, you should consider this product." Eric Balkan in The Computer Consultant: "I'm impressed with the imagination that went into this product." A user: "Thanks for making my life easier!"

Grammatik and Proofreader are compatible with all CP/M, MS-DOS (including IBM PC), and TRS-80 word processors.
Current CP/M formats:
standard 8", NorthStar, Omikron TRS-80.
Please call or write for details of minimum system sizes, and availability of additional disk and operating system formats. Shipping costs included.
Please specify your system configuration when ordering. Dealer inquiries invited.
MS-DOS versions scheduled for March 1982 release.

| | Proofreader | Grammatik |
|---|---|---|
| CP/M, MS-DOS | $129.00 | $149.00 |
| TRS-80 Model II | $99.00 | $99.00 |
| TRS-80 Mod. I/III | $54.00 | $59.00 |

(Model I/III interactive correction option - $30.00)

Trademarks: CP/M: Digital Research; TRS-80: Tandy Corp.; Proofreader, Grammatik: Aspen Software Co.

## Grammatik, continued...

*Grammatik*, a program to check style and grammar. And, just for laughs, he decides to let it check for sexist terms as well.

### Searching for Offenders

I can hear you now. *Grammatik* can check my grammar and style? How? *Grammatik* contains a "dictionary" of 500 commonly misused phrases. Figure 1 lists several phrases, error types and suggestions used in *Grammatik*.

The program scans through your ASCII or normal word processor document in search of these offenders. Whenever it finds one it stops and makes a suggestion.

Every time you use the word "hopefully," it will tell you that you have used a commonly misused word ("hopefully" means "in a manner that is full of hope." It doesn't mean, "it is to be hoped.") and that you should avoid it.

Every time it finds "I myself" the program will tell you that it is redundant and that "I" is sufficient. Unfortunately, the program won't check for endings that are misused. The endings "wise," "ize" and "ly" are horribly overused and can almost always be eliminated to the benefit of all. I think the next version will scan for things like this.

Probably the best way to describe what *Grammatik* does is to list the error types that the program uses. See Figure 2.

*Grammatik* also checks the number of sentences and words and the average length of the sentences and words. It displays the percentage of short and long sentences. Using that information, it is a simple task to calculate your "fog index." And it counts the occurrences of forms of the verb "to be" and the common prepositions.

All these are indirect measures of the readability of the document. Long sentences and long words are signs that the document is hard to understand. Too many uses of the verb "to be" indicate over-use of the passive voice, which saps the strength from a document. A high ratio of these and the prepositions indicate that the work can probably be improved by rewriting.

So far, we have seen several impressive implications for *Grammatik*. Note that *Grammatik* doesn't know anything about the meaning of words. It can't check for subject-verb agreement, dangling participles, or split infinitives.

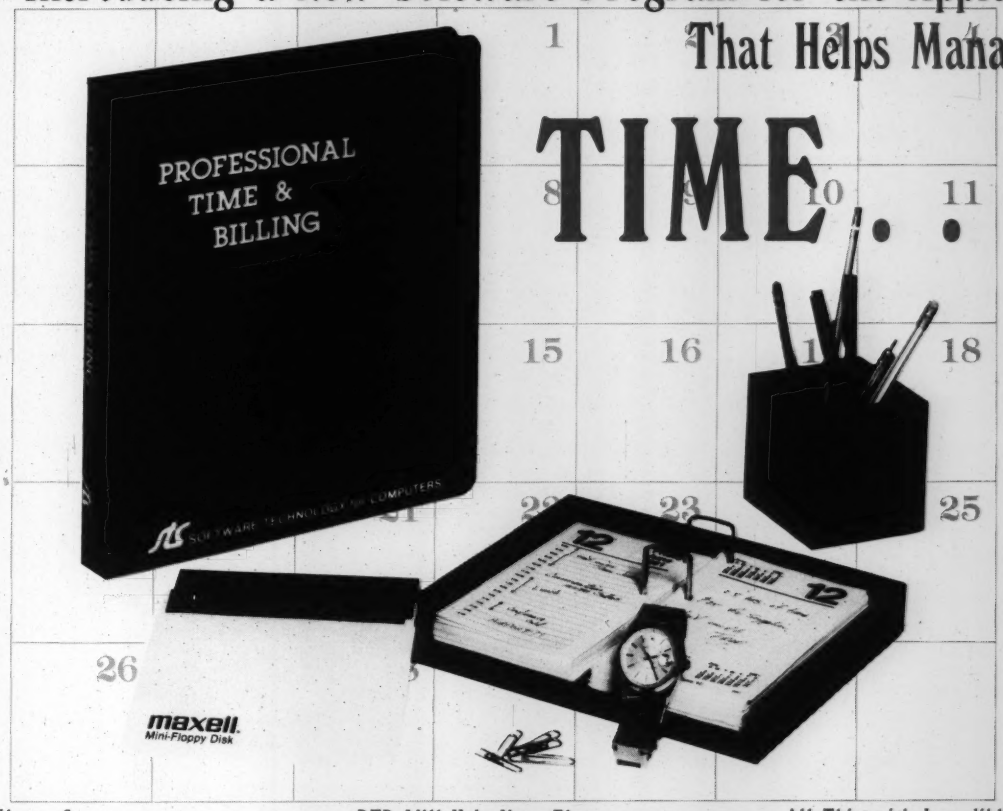
*Figure 1. A Sample of Grammatik Phrases.*

| "Incorrect Phrase" | Error | Suggestion |
|---|---|---|
| a number of | Wordy | several, many, some |
| ain't | Informal | revise |
| alas | Archaic | revise |
| already | Misused | already=by now |
| alot | Spelling | a lot |
| and/or | Awkward | revise |
| hopefully | Misused | avoid |
| I myself | Redundant | I |
| must of | Improper | must have |
| seldom ever | Redundant | seldom |
| stick to your guns | Trite | persevere |
| through the use of | Wordy | by, with |
| very | Vague adverb | avoid or revise |
| Xerox | Trademark | photocopy |

*Figure 2.*

A—archaic usage
B—Unbalanced ( ) or " "
C—Capitalization error (such as "i" or "STePhen")
D—Doubled word or punctuation (and and ,,)
E—User defined error
G—Gender specific term ("laborer" instead of "workman")
I—Informal usage ("ain't")
J—Jargon or technical term
K—Awkward Usage ("and/or")
M—Commonly misused word ("eminent," "imminent," and "immanent")
O—Overworked or trite ("stick to your guns")
P—Punctuation error
R—Redundant phrase ("seldom ever" should be "seldom")
S—Spelling error ("alright" should be two words)
T—Trademark (Xerox is not a verb)
U—Improper Usage ("must of" is wrong)
V—Vague adverb ("very" adds very little)
W—Wordy phrase ("a number of" can be replaced with "several")

# Introducing a New Software Program for the Apple™ That Helps Manage TIME. . .



## Every Minute Counts.

When you charge for time, every minute counts. Counting up the charges, determining accountability for your services, making billing decisions—your livelihood depends on these tasks. Time itself and the cost you assign to it—are the real commodities of the professional practitioner.

## Performs Like a Service Bureau.

The Professional Time & Billing program performs time management and billing functions as expertly, efficiently and smoothly as a prestigious service bureau but at a fraction of the cost! With the PTB program, turnaround time is virtually eliminated. Instant access to information and the ability to make quick, effective billing decisions are virtually at your fingertips. With delays eliminated, your cash flow will increase significantly.

## Designed by Professionals.

The Professional Time & Billing program by SOFTWARE TECHNOLOGY for COMPUTERS was designed by professionals who understand that time is money. Their purpose in creating this program is to give you the best possible return on your time.

## PTB Will Help Your Firm.

The PTB program will keep accurate records of WHICH staff member performed WHAT work for WHICH client. Up to 120 user-defined rate codes of time, expenses or fixed fees can be used. Even nonbillable work and non-time-related expenses can be recorded. The program provides accurate records of monies received from clients on account or other receipts you may want to record. The PTB program will correlate all this information, assemble a comprehensive set of internal reports, and generate statements for services rendered.

## The System Will Pay for Itself.

The PTB program will more than pay for itself by increasing the speed, accuracy and efficiency of your client accounting and billing procedures.

## Who Needs the PTB Package?

CPA firms, law practices, advertising agencies, architectural firms, engineering companies, private consultants, health care centers and countless others that depend on the ability to accurately and meaningfully manage billable time and resources.

## All This with Incredible Ease for $395 (U.S.).

The Professional Time & Billing program requires no previous background in computers or programming. Extensive documentation and detailed explanations of how the system works provide an unparalleled level of trouble-free, user-oriented performance. Furthermore, you can learn to use the program in a minimal amount of time.

The complete package costs $395 (U.S.) and includes a 3-ring binder, program diskette and user's manual. The program will run on an APPLE II or II Plus computer with 48k, a serial or parallel printer and 2 disk drives. No other special hardware add-ons are required.

## For a Personal Demonstration.

For a personal demonstration of this outstanding program and other fine products from us, contact your local dealer. Call or write us for the whereabouts of your local dealer at:

**SOFTWARE TECHNOLOGY for COMPUTERS**
P.O. Box 428 Belmont, MA 02178
(617) 923-4334

"THE DIFFERENCE LIES WITH THE SOFTWARE"

If your local dealer does not carry the PTB program ask him to give us a call. We are committed to providing quality software at reasonable prices.

Apple is a trademark of Apple Computer Company.

**Grammatik, continued...**

Of course, there are cases in which *Grammatik* will call something an error that is actually correct. This seems to be particularly true of the sexist analysis of fiction. There are cases where "his" is the correct word. Robert picked up his ball. The document must still be checked by a regular human.

***The advertisement was a classic example of undersell.***

**Turning the Program On**

The advertisement had me drooling with desire. I had to have it. So, I ordered one on Friday. Astoundingly, it arrived on Monday. I went directly to my trusty TRS-80 and began to analyze a short story of mine, "Snow Before the Summer Sun."

It is difficult to imagine the program being any easier to use. Typing GMK starts the program. It is menu driven and most of the commands take a single keystroke. D reads in the dictionary. I=SNOW told it which file to check. F= > told it to ignore the Scripsit format characters. I told it to start by typing "//."

The story began to appear on the screen. When the program found what it considered a problem, it stopped to call my attention to it and to give its suggestion. When I hit Enter, it went on. When it was finished with the story, it gave me its final analysis table as shown in Figure 3. It only took a few minutes.

I leaned back, sending my swivel chair to its farthest back position and closed my eyes. My fingertips massaged my forehead as though that would drive away the slowly creeping headache. Carefully, I glanced at the screen. The program was good. Very good. Yet there was this gnawing ache that bothered me and wouldn't go away.

Perhaps my initial expectations about *Grammatik* had brought me to this: late night, tired eyes, wishing that I was a smoker so that I could forcefully snuff out a well chewed butt. I picked up the magazine and let it fall open to the page. The advertisement said that the program would check capitalization, punctuation, doubled words and several commonly misused words. The program did all that and more. If anything, the advertisement was a classic example of undersell. I was incredulous: here was a program that didn't claim to bring heaven on earth and actually delivered more than it promised.

I lifted the soda can and found that it had been empty for hours. A quick toss in the general direction of the waste paper basket showed why the Lakers still weren't interested in me. I settled for covering my mouth with my hand.

I had expected too much from the program or perhaps too little of myself. Although I like to consider myself a professional class writer I am, in my heart, still the English student who got a "C" because the teacher was merciful. I expected the program to tell me a hundred ways to improve my story. It didn't. It found six errors and I had committed all but one of those intentionally. I expected the program to turn me into Harlan Ellison. It had told me that I was a pretty good writer already.

*Figure 3. The Grammatik analysis for "Snow Before the Summer Sun."*

```
Summary for SNOW / Problems detected: 5

# sent: 330 ; words: 3000

avg sent length: 9.1 ; avg word len: 4.1

# questions: 2 ; # imperatives: 4

short sent(<14 wds):270 ; long sent(>30 wds):3

longest 36 wds at #76 ; shortest 1 wds at #184

to be's: 20 ; prepositions: 188

User category totals:

NONE
```

Sitting down once again, I stared at the glowing white letters. I had decided that the program would be useful to a professional writer if only because it checks for doubled words. Considering the price, a mere $49 for the TRS-80 Model I, I could even recommend it on that basis. Don't sell your kids to get one though.

***This program is like having an English teacher available to you all the time.***

**Who Needs It?**

Who needs this program then? Where does it fit in the cosmology of computer software? It is such a nifty program that it has to be perfect somewhere. The connection dawned on me finally. This program is like having an English teacher available to you all the time. Running it on a regular basis would improve your writing skills.

Several people have reported that they receive fewer problem messages as they work with it longer. *Grammatik* would be a good choice for students and anyone who feels his writing skills could be improved. Considering the state of American literacy, that includes most of us.

I have a higher enthusiasm threshold than that. Like the spelling checkers, *Grammatik* can also be expanded to include phrases of particular significance to you. It can become your personal editor and English coach. I love to start sentences with "and." That's not a particularly good idea. So I loaded the *Grammatik* phrase dictionary into *Scripsit* and I added the phrase ".And" with the note to be careful not to overuse it. Now I get a reminder everytime I do it.

There are other words that I use too often. My copy of *Grammatik* checks for them, too, and gently tells me to watch out. I am constantly looking up "its" and "it's." Now the program stops to remind me which one is which. "Affect" and "effect" are the same way.

*Grammatik* has room for 300 additional phrases. That is more than enough. After three hours I added only 50 phrases. It is this utility that turned that initial evening's frustration into enthusiasm.

I like *Grammatik* a great deal. At $49, it is a worthy and useful addition to your word processing software. Now, if someone will write a program to detect dangling participles and split infinitives...Or better yet a program that will turn me into Harlan Ellison. □

# Customized Lists and Letters

Herb Friedman

**creative computing**
**SOFTWARE PROFILE**

**Name:** Special Delivery
**Type:** Mailing and form letter system
**System:** 32K TRS-80 Model I, II, or III, Disk Drive
**Format:** Disk
**Language:** Assembly
**Summary:** Excellent
**Price:** $125
**Manufacturer:**
Software Concepts
169 Preston Valley Shopping Center
Dallas, TX 75230

*Special Delivery* is a complete mailing system designed specifically for single or multiple disk drive TRS-80 computers. Unlike other mailing list programs that simply create one or more files that can be listed or searched on demand, *Special Delivery* provides for multiple coded "mail files," the printing of merged letters, conversion of standard Radio Shack software mailing lists into the *Special Delivery* format, and training. The training consists of three sample files for practice in preparing and using a list of names and addresses (the mailing list), preparation of merged letters, and preparation of mailing labels.

Before we go any further we'd better take time out to explain the merge process, because it is the main reason that *Special Delivery* is more than just an ordinary mailing list program.

Herb Friedman, Tridac Electronics Corp., 588 Hewlett St., Franklin Square, NY 11010.

***You had to be a dummy to believe you were getting a personal letter.***

If you think back to the "junk mail" you received a few years ago offering once-in-a-lifetime buys—real estate in the desert miles from water, "free" trips to vacation swamplands, and the like—you will recall that the mailer tried to personalize the letter as if you and your family were personal friends—the only ones in town to receive the offer.

Unfortunately, computer software wasn't all that good a few years ago, so the program simply dropped your name into a prewritten "computerized" format, and the letter might have looked something like the sample in Figure 1.

Obviously, with all that open space around the name and hometown you had to be a dummy to believe you were getting a personal letter.

The spaces are caused by the manner in which the letter is prepared. Because the software simply drops the name and address into a prepared text, sufficient space must be left to accommodate the longest names and addresses. Whatever space isn't used by characters appears as empty space in the final copy.

But now, with improved software, things are more precise. Word processors can merge the mailing list into the computerized letter and eliminate extraneous spaces with a "pull-up," which simply tightens up the text to the insert. Today, the same letter would appear as in Figure 2.

The letter now really looks and reads like a personal letter. If the printing is

# Turn your Apple into the world's most versatile personal computer.

**The SoftCard™ Solution.** SoftCard turns your Apple into two computers. A Z-80 and a 6502. By adding a Z-80 microprocessor and CP/M to your Apple, SoftCard turns your Apple into a CP/M based machine. That means you can access the single largest body of microcomputer software in existence. Two computers in one. And, the advantages of both.

**Plug and go.** The SoftCard system starts with a Z-80 based circuit card. Just plug it into any slot (except 0) of your Apple. No modifications required. SoftCard supports most of your Apple peripherals, and, in 6502-mode, your Apple is still your Apple.

**CP/M for your Apple.** You get CP/M on disk with the SoftCard package. It's a powerful and simple-to-use operating system. It supports more software than any other microcomputer operating system. And that's the key to the versatility of the SoftCard/Apple.

**CIRCLE 197 ON READER SERVICE CARD**

**BASIC included.** A powerful tool, BASIC-80 is included in the SoftCard package. Running under CP/M, ANSI Standard BASIC-80 is the most powerful microcomputer BASIC available. It includes extensive disk I/O statements, error trapping, integer variables, 16-digit precision, extensive EDIT commands and string functions, high and low-res Apple graphics, PRINT USING, CHAIN and COMMON, plus many additional commands. And, it's a BASIC you can compile with Microsoft's BASIC Compiler.

**More languages.** With SoftCard and CP/M, you can add Microsoft's ANSI Standard COBOL, and FORTRAN, or Basic Compiler and Assembly Language Development System. All, more powerful tools for your Apple.

**Seeing is believing.** See the SoftCard in operation at your Microsoft or Apple dealer. We think you'll agree that the SoftCard turns your Apple into the world's most versatile personal computer.

**Complete information?** It's at your dealer's now. Or, we'll send it to you and include a dealer list. Write us. Call us. Or, circle the reader service card number below.

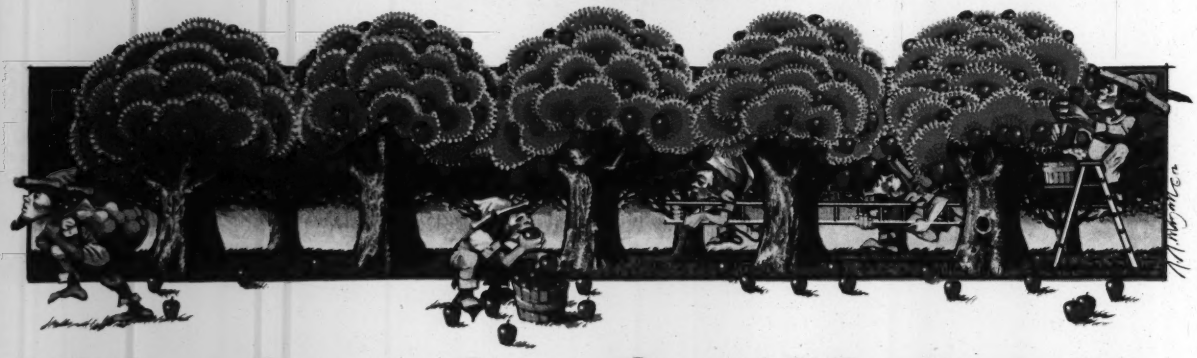
# Turn your Apple* III into an Orchard



## With software from Quark™ Engineering

Quark Engineering brings you software specially designed for your Apple III. Easy-to-use products that dramatically increase your system's capabilities. And **your** productivity.

You start with Word Juggler™, the most easy-to-use word processor available for the Apple III. Word Juggler is written in assembly language. And comes with special keyboard templates to label important functions.

Word Juggler retails for $295. Form letter and simple mailing list capabilities are included free. If you want even more capacity, you can interface with Apple's Mail List Manager for an additional $35.

Need to check your spelling? Add Lexicheck™. A high-performance spelling checker with a 25,000-word dictionary. You can add your own words. And get more accurate documents, without a lot of proofreading. The price? Less than a penny a word. Only $195.

You can even send text from Word Juggler to computerized typesetting equipment. All you need is TypeFace™. Interface software which cuts your typesetting costs and eliminates re-keying errors. $175.

Finally, there's TranScribe™. A spooler designed especially for hard disk drives. TranScribe lets you use other computer functions while you're printing. And it's compatible with most Apple III software. $125.

There's much more to tell you about Word Juggler, Lexicheck, TypeFace and TranScribe. See them at your local dealer. Or contact us today. We'll help you turn your Apple III into an orchard. And from then on, you'll find easy picking.

**CIRCLE 226 ON READER SERVICE CARD**

done on a letter quality printer, no one could tell for certain whether it is, in fact, a single, personal letter, or one of several million letters which are identical except for the name and address. Keep the merge in mind as we discuss *Special Delivery*.

*Special Delivery* consists of three distinct programs and three sample files. The programs are: Mailform, Mailrite, and Convert (which converts Radio Shack lists to the *Special Delivery* format).

**Mailform**

Mailform is a stand-alone machine language program for creation and editing of name and address files (mailing lists). It runs in an overwrite mode with full cursor control that permits selective editing of data entries. If you make a spelling error when entering data you can correct only the error; there is no need to redo the entire data block.

It supports both the Electric Pencil and Radio Shack upper-/lower-case hardware, and supports the Electric Pencil control key, and the Radio Shack control, which consists of simultaneous operation of the Shift and down-arrow keys.

The functions of Mailform are activated by the control keys. A function menu with a short description of each function is displayed at all times at the right side of the CRT screen, as shown in Figure 3.

Figure 3 is an almost identical print of the CRT screen display made with the NEWDOS JKL function. The difference between Figure 3 and the actual CRT display is the underscore next to the data entry area on the left side of the screen.

Each space that can be filled with a character representing data is indicated on the CRT by an underscore. The printer shows this as a left-arrow because Radio Shack has their printers do some weird things with underscores and up-arrows (the standard exponentiation symbol).

The left side of the screen is a record, the individual entry for each person. A character can be entered only where there is an underscore; for example, all states must be identified by a standard Post Office two-letter abbreviation. You cannot use more than two letters because the program will not accept input beyond the end of the line—the last underscore on the right.

Each record has eight Data Fields, from NAME at the top through DATA 2 at the bottom. The list can be searched for information in any of the eight fields, and information in selected fields can be printed out on a list, on labels, or in a letter.

Normally, the DATA fields contain information about the individual, but they can also be used for foreign addresses. For example, assume you want to mail a letter to Canada. Even the accepted abbreviation of "CAN" won't fit in the STATE field. Also, Canada has postal codes that resemble long distance telephone numbers. You handle this situation by simply using the DATA fields. You can put the special postal code in the DATA 1 field and the country in the DATA 2 field.

Directly under DATA 2 is the RECORD # line, which contains space for user entry of the record number for a particular mailing list, and has displays that read LAST and MAX.

LAST and MAX are controlled by the program and cannot be modified by the user. The three-digit number to the right of LAST is the Record number of the last entry. The three-digit number to the right of MAX is the maximum number of records that can be entered for a specific file (mailing list), which is determined by the amount of memory in the computer.

The program looks at the top of memory—leaving 100 bytes free for user use if desired—and calculates how many records can be included in each specific file.

Under the RECORD # line is the FILESPEC line. Here, the user enters the "code" name assigned to a specific mailing list when creating a file, and enters the file name when calling in a file from memory.

*Figure 3.*

```
      MAILFORM -V 1.3- (C)1979 BY SPECIAL DELIVERY-WATSON
NAME     <<<
```

109 records in the Space/B file. There is still a great deal of room left in the file.

Depending on what we would like to do, we can list or print the entire list from record number one to the end, or search for specific information by the record number, or field. For example, we could search and list those people in a specific town, street or postal zone, or by DATA information.

If files are too large to fit into the available memory, they can be segmented, then edited and saved to disk under a different FILE-SPEC. Conversely, files can be chained together for continuous processing as one list.

**Mailrite**

The Mailrite program is designed to print letters, envelopes and labels from a mailing list created by the Mailform program. It is supplied in two versions: Mailrite/CMD and Mailrite/CEN.

The difference between the two is the type of printer with which it is to be used. Mailrite/CMD is for printers that support an underscore. Mailrite/CEN is for Centronics-type printers, which automatically linefeed when a carriage return is received, and do not support underscore.

For letter preparation, the original Mailrite text is prepared using the Electric Pencil. Special flags imbedded in the text tell Mailrite what data from the mailing list is to be substituted for the flag and merged into the text. The flags represent complete name, last name, address, state, DATA, and so forth. An example of a merged letter is shown in Figures 6 and 7. Figure 6 is a print of the original text with flags, as prepared using Electric Pencil software.

Starting at the top of the letter we have two somewhat confusing lines. These are instructions for the operator and are placed at the top of the letter where they are ignored by Mailrite. (Remember, when you use Mailrite, the top two lines don't print. If you start your letter at the top you will lose the first two lines. This also applies to envelopes and labels. The top two lines are provided so specific instructions can be included with each letter.)

The print of the letter will start with the normal DATE location, which in our form letter has the line YOUR LUCKY MONTH, DAY, AND YEAR. Then come the flags, which are indicated to the program by the less than (<) symbol. N is for the complete name, C the address, and so on. Notice how the flags are imbedded within the text of the letter.

One of the millions of recipients of this form letter will be our friend, Joe Doakes, who provided the data for record number 29 shown in Figure 5.

Figure 7 shows how the letter appears when Mailrite merges the mailing list into the text. There is absolutely no one who can say with certainty that this is a form letter from its appearance. Each bit of information about the Doakes family is correctly positioned and there are no telltale extraneous spaces to indicate that the letter is computerized.

After Figure 7 there is nothing more that can be said of *Special Delivery*—that letter says it all. It takes some practice to become familiar with all of *Special Delivery's* features—two to five hours for hassle-free preparation of files and imbedded flags—but the results are more than worth the time spent learning all the ins and outs of this software package. □

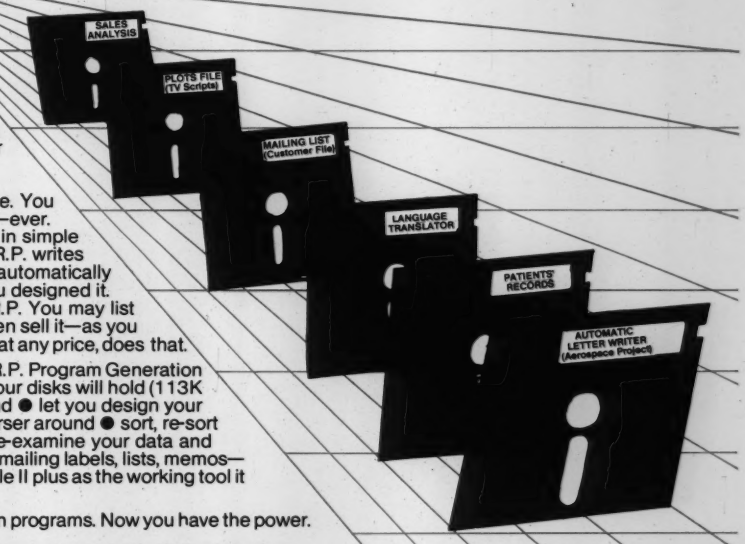
©CREATIVE COMPUTING

*"Believe me—you're making a big mistake."*

# your power is ready...
# software that writes software
## for Apple II™

NEEDED: Apple II Plus with Auto Start, 2 drives, Applesoft in Rom, 48K.



C.O.R.P.™ writes software. Perhaps you should read that again. Not "simplifies programming" or "makes debugging easier." C.O.R.P. writes APPLESOFT BASIC—complete, stand-alone programs which run, bug-free, the very first time. You need not type a single character of basic code—ever. C.O.R.P. does that. Your answers to questions in simple English "design" the program. In minutes, C.O.R.P. writes all the program code, scrolls it to the screen and automatically saves it to your disk. Your program because you designed it. Once written, your program runs without C.O.R.P. You may list your program, examine it, modify it further or even sell it—as you wish, royalty free. No mere "data base manager," at any price, does that.

The applications are almost limitless. Your C.O.R.P. Program Generation System will: ● handle nearly as much data as your disks will hold (113K per disk!) ● find any record in less than a second ● let you design your own screens as quickly as you can move the curser around ● sort, re-sort and update your data for you ● examine and re-examine your data and then print reports, checks, invoices, statements, mailing labels, lists, memos—you name it. C.O.R.P. allows you to use your Apple II plus as the working tool it really is. Isn't that why you bought one?

Computers should write code. You should design programs. Now you have the power.

**C.O.R.P. I features: ● a data entry program generator ● a full sort sub-system ● an update sub-system ● a full diagnostic package ● a print program generator . . . . . $235**

**C.O.R.P. II features: ● all of C.O.R.P. I plus: ● a system menu generator ● a complete forms letter generator ● a full files editor ● a system demo package ● an Applesoft tutorial . . . . . $425.**

# Project Planning, Scheduling, and Control

*John M. Nevison*

Jack Nevison is well known to Basic programmers for his earlier book, the excellent *Little Book of Basic Style: How to Write a Program You Can Read.* He presently makes his living as a consultant to corporations on executive computing needs.

*Executive Computing* is an introduction to using a small computer and the Basic language to meet the information processing needs of people in management. Very little knowledge of Basic is needed, and the examples in the book build on one another so that the reader moves easily from one level of complexity to the next.

Other selections of the book provide case studies and programs in inflation analysis, graphing sales, long range planning, budgeting, cost and risk analysis, information retrieval, inventory control, complex scheduling, decision analysis, and forecasting.

Appendices are provided that give an introduction to Basic programming, a number of useful utility programs, a discussion of buying a computer, and an introduction to VisiCalc.

*Executive Computing* is an excellent book, the material presented here is representative of the rest of the chapters.

Excerpted from Chapter 6 of *Executive Computing* by John M. Nevison, copyright © 1982, by permission of Addison-Wesley Publishing Company, Inc., Reading MA 01867. All rights reserved.

*If one advances confidently*
*in the direction of his dreams, and endeavors*
*to live the life which he has imagined, he will*
*meet a success unexpected in common hours.*

*—Henry David Thoreau*

The three product managers of Deer Division, Jean Grant, Robert Grasso, and Martin Graves, had all come up from the sales force. The general manager of the division, Eileen Randall, appreciated their marketing talent but was frustrated by their inability to plan, schedule, and control projects. At the suggestion of Steve Cauldwell, she had arranged for George Lee from the Wolf Division to come over and give a one-day seminar to her three product managers.

Lee had worked hard to prepare his presentation. He knew he would be talking to three senior managers and he wanted his material to flow smoothly. The group met in a small conference room.

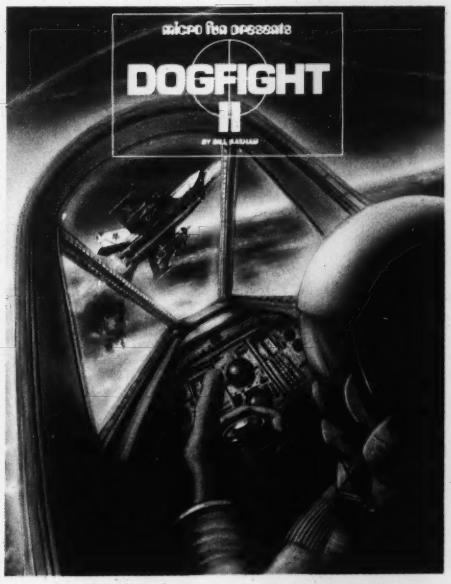
"We are going to go over a technique for planning projects that are composed of several parts. I'm going to use a simple example for the sake of illustration, but together we are going to build some methods that can be used on much larger

# EXCITING GAMES

FOR THE APPLE* FROM

micro fun

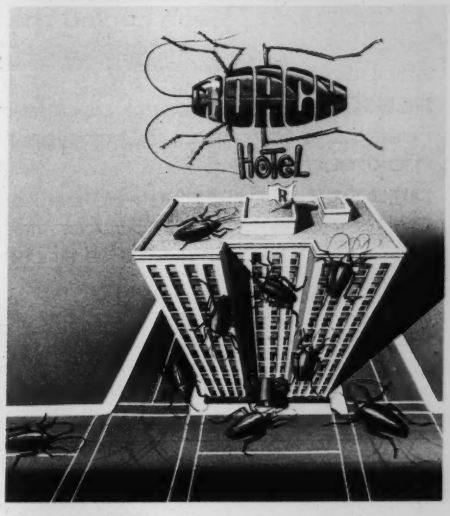
*entertainment division of micro lab*



DOGFIGHT II. An established classic Arcade game. Set up a game for one to eight players each piloting a jet into combat. Play on one team, two, or against the computor.

PEEPING TOM. Another fast-acting arcade thriller. Shoot various aliens you peep at through windows. It takes perception, luck and skill to defeat the invaders.

In CROWN OF ARTHAIN, you, and another player battle realistic, animated monsters for the crown. Skill and excitement for youngsters under thirteen.



ROACH HOTEL. A high-res, fast-action, arcade game. Stamp out roaches before they take over. Points, bonuses, and additional rounds are earned as your skill increases.

projects. Let's keep this informal. Please interrupt at any point with questions. Our first example is the guest-cook problem.

**Help with Dinner**

"Suppose company is coming to dinner on Saturday night and that one guest always insists on helping in the kitchen. The guest cook retards the schedule rather than advancing it. The problem is how to use the help without delaying dinner.

"A good place to begin is with a graphic representation of the project of preparing dinner. The chart that follows is known as a Gantt chart. It's named for Henry Gantt who did quite a bit of work early in this century on how to prepare diagrams that help with project planning and control.

```
                              TIME (MINUTES)
JOB      0          50         100        150        200
         +----------+----------+----------+----------+
SHOP     IXXXXXXXXXXXX
PREP     I           XXXXXX
SALAD    I           XXXXXXX
COOK     I                  XXXXXXXX
SERVE    I                        XX

LEGEND:  XXX PLANNED
```

"The chart shows five jobs, their lengths and when they happen. The jobs are: shopping for the meal, preparing the meat and vegetables, making the salad, cooking the meat and vegetables, and serving the meal. The longest job is SHOP; the shortest is SERVE. The earliest is SHOP; the latest is SERVE. (Only by coincidence are they also the longest and the shortest.) Two jobs can go on concurrently: SALAD and PREP for example. While nothing explicitly says which job follows which job, we may guess that SHOP precedes SALAD and PREP, PREP precedes COOK, and COOK and SALAD precede SERVE.

"To get a computer program to draw this picture we need to provide it with some information."

"Excuse me," said Grant, "but why do we need a computer to do this? It looks simple enough to do by hand."

"Sure, of course it is," agreed Lee. "But if we can do this small example, then we may apply the same technique to a much larger one later."

"Okay, let's give it a try," Grant shrugged.

"Here's our initial information," said Lee.

```
330     DATA BEGIN,  1,  0
340     DATA SHOP,  12,  1
350     DATA PREP,   6, 13
360     DATA SALAD,  7, 13
370     DATA COOK,   8, 19
380     DATA SERVE,  2, 27
390     DATA END,    0, 29
400 '
```

"The first number is the length of time in five-minute units. The second number is the time at which the job can start. To print out the first line of the Gantt chart we would write the following:

```
480     PRINT J$(J); TAB(11); "I";
500     FOR K = S(J) TO (S(J) + L(J) -1)
510         PRINT TAB(11+K); "X";
530     NEXT K
540 '
```

This would print out:

```
SHOP     IXXXXXXXXXXXX
```

where each X equals a five-minute unit of time."

"The full program that printed out our complete Gantt chart looks like this:

```

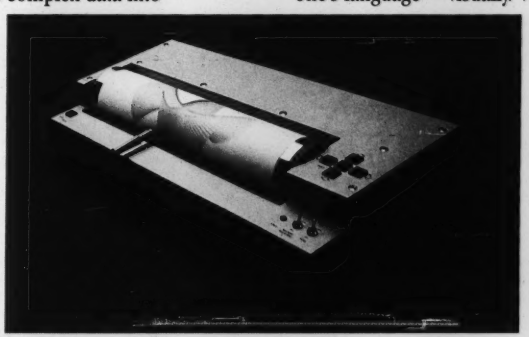
# How to chart your company's fortune without spending one

It's a fact. A single chart or graph can tell you instantly what it takes hours to interpret from printouts or other raw data.

Now, with the Strobe 100 Graphics Plotter and Software package, you can create superb hardcopy graphics directly from your computer. And you can do it for an investment of only $995.

The Strobe System transforms complex data into dynamic, colorful visuals with a few simple commands from your computer. Charts and transparencies that once took hours to produce are plotted within minutes. Information can be presented as bar charts, pie charts, curves or isometrics in a variety of colors. And with a resolution of 500 points per inch, the Strobe 100 matches or surpasses the quality of plotters costing thousands of dollars more.



You can also save and modify your graphics through Strobe's menu-driven programs. A broad selection of software—including a VisiCalc*-compatible program—is now available.

When the Strobe Graphics System is interfaced to your computer, an 8-1/2 x 11 inch sheet of paper can speak anyone's language—visually. Visit your local dealer and learn how to start charting your fortunes today. Because a perspective on the present can also be your window on the future.

*"Yes, I did receive your computer billing—I gave it to my computer to pay..."*

"In our case, this Gantt chart is a way of showing someone how to make dinner."

"It doesn't show that," said Grasso. "You don't learn how to cook by looking at it."

"Good point," said Lee. "I was wrong. What the chart shows is how to plan making dinner. It shows the tasks that someone must do. It shows how the components of the project are arranged in time. The shopping must be done first and will take an hour. The salad and the main course may be prepared concurrently. After everything is ready, the meal is served.

"We can also use our chart to track the project, to control it. As each job is done we tick it off the chart. Or we could draw a second line that represents the actual task, start to finish. We could alter the chart to reflect changes in the plan. New progress could be charted on the revised plan.

"Finally, because an old chart provides a history of the plan and its fulfillment, we can use the chart to improve estimates for the next project. One person takes longer than anticipated to complete a job. Certain supplies arrive sooner than anticipated. Another person does a job in half the estimated time. All these lessons can be incorporated in the next plan to make it better.

"In fact, by adding the actual start and finish of each task to our table of data, and revising our program slightly, we can get a chart that looks like this:

```
                                TIME (MINUTES)
JOB      0          50         100        150        200
         +----------+----------+----------+----------+
SHOP     IXXXXXXXXXXXX
         I............
PREP     I           XXXXXX
         I           ......
SALAD    I           XXXXXXX
         I           ........
COOK     I                  XXXXXXXX
         I                  ......
SERVE    I                           XX
         I                         ..

LEGEND: XXX PLANNED
        ... ACTUAL
```

"Looking at the chart, we see that dinner was ready a little early because it did not take as long to cook as was anticipated. Our chart also has given us one part of the answer to our guest-cook question. Because only two jobs go on concurrently, the guest must help with one of them. So the question becomes which one?"

**The Program Gantt**

(Program appears earlier in text.)

**Exercises**

1. Revise GANTT to print the actual jobs.

**From Jobs To Networks of Jobs**

"To answer this question we need to know exactly how each job relates to the others. We need to sketch a network of jobs. We can draw this network for our dinner" (Figure 6.1).

"Why are the BEGIN and the END JOB on the drawing?" asked Graves.

"Because it's possible for projects to blossom into several jobs at the beginning or conclude with several jobs running in parallel. In order to begin and end the network cleanly, it is convenient to have a single entry point and a single exit point. For example, if we were to add a task called POUR-DRINKS, the task might have no predecessor but BEGIN and no successor but END.

"Looking at the network diagram you can figure out how long it will take to go from start to finish. For each job we will

set down two numbers, the length of the job and the job's earliest start:

```
                BEGIN (1,0)
                SHOP (12,1)
PREP (6,13)                    SALAD (7,13)
COOK (8,19)
                SERVE (2,27)
                END   (0,29)
```

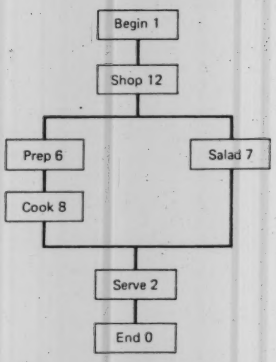

**Fig. 6-1** A Network of Jobs

"Computing the early start is straightforward if you know the length of each job. Notice that SERVE must wait until the last of it predecessors, COOK is completed. SERVE waits to start until time 27. Again, time is in five-minute intervals."

"Does that mean the whole dinner took 28 units to complete and that everyone can start eating at time 29?" asked Grant.

"Yes, that's exactly right," said Lee. "Thanks for pointing that out."

"Why does BEGIN have a length of one?" asked Grasso.

"It's a trick to make all the first jobs start in interval number one. It doesn't affect anything, Good question."

"Now our example is simple enough," continued Lee, "that the next calculation may look silly, but bear with me. I'm going to start at the end and walk backwards through the network and calculate the latest possible starting time for each task. I'm going to list it as the third number inside the parentheses:

```
                END   (0,29,29) 0
                SERVE (2,27,27) 0
COOK (8,19,19) 0
PREP (6,13,13) 0       SALAD (7,13,20) 7
                SHOP  (12,1,1) 0
                BEGIN (1,0,0) 0
```

"In all but one case the early and the late starts are the same. Only the SALAD has two different starts. Because the other jobs that precede SERVE take so long, SALAD could delay its start until time 20. It could start as early as time 13. The difference in the starting times is called 'slack.' SALAD has seven units of slack. The number indicating the slack is printed to the right of the parentheses.

"All the other jobs have no slack. Notice the zeros on the right of their parentheses. When a job has no slack it is on the slow path of the project. The slow path is the 'critical path' because any job delay on that path delays the whole project. The critical path for our project is SHOP, PREP, COOK, and SERVE.

# The Investor's Edge

If you are a serious investor, you need to be able to know how well you are doing, how well your past strategies have worked, the potential success of future actions, and even the present state of your portfolio to make intelligent decisions. A computer with the right program can significantly reduce the amount of effort necessary to determine this information.

Stock and Options Analysis, by Dr. Alfred Adler, contains four programs that can justify the purchase of a computer by the serious investor. With these programs, you can easily graph the possible returns from different investment strategies. You can intelligently use puts and calls in combination with stock purchases and sales to minimize risk, maximize returns, or even limit risk at the same time you increase returns. Another program allows you to quickly produce a listing, item by item, of the cost, current value per share, total current value and capital gain of a portfolio that may mix long and short stock and long and short option positions.

Stock and Options Analysis is available for two popular microcomputer systems, the Apple II and the TRS-80. It comes with a 25 page instruction manual that thoroughly discusses the use of computer generated charts and tables generated by these programs to analyze your own investment strategy. The manual is available separately for $2 and we recommend that you purchase it first if you have any hesitation about purchasing this outstanding package.

**STOCK AND OPTIONS ANALYSIS**
CS 3801 TRS-80 Diskette (32K of memory) $99.95
CS 4801 Apple II Diskette (32K of memory) $99.95
RP-03 Instruction booklet (separately) $2.00
Also available for the TRS-80 computer:
Advanced Statistics
CS 3303 16K Cassette $24.95
CS 3505 32K Diskette $24.95
Graphing Package
CS 3301 16K Cassette $19.95
CS 3803 32K Diskette $24.95
Investment Analysis (6 programs)
CS 3305 4K Cassette $24.95

**Order Today**

To order software packages, send payment* indicated plus $3.00 postage and handling to Creative Computing, Dept. C062C, One Park Avenue, Room 458, New York, N.Y. 10016. Orders may also be charged to your Visa, MasterCard or American Express account — by mail include credit card name, number and expiration date or if you prefer, use our 24-hour toll-free number, 800-631-8112. In NJ only 201-540-0445.

# SIGGRAPH '82

**Plan now to attend SIGGRAPH '82, The Ninth Annual Conference on Computer Graphics and Interactive Techniques, July 26-30 in Boston.**

SIGGRAPH '82 is a complete technical conference covering every phase of computer graphics. The conference features:

- Exhibits by more than 140 companies displaying the latest graphics hardware, software, peripherals, and services
- 24 diversified courses including introductory tutorials and advanced seminars
- Technical sessions featuring the latest in research and innovative applications
- Detailed vendor forum presentations
- Computer-generated film and art shows

The premier national event in computer graphics. SIGGRAPH '82 is the only conference where you can get a well-focused and in-depth perspective on both the present and future directions of this challenging aspect of computer technology.

For registration information, call or write:
SIGGRAPH '82
Convention Services Department
111 East Wacker Drive
Chicago, Illinois 60601 U.S.A.
312/644-6610

"If the network of jobs were larger than in our simple example, say several hundred elements, then it would be difficult to keep an eye on all the pieces. The prudent manager pays the most attention to those jobs on the critical path. By making sure they are going well, the manager is making sure the project as a whole is staying on schedule. Of course if another job slips more than its planned slack, it may end up on the critical path also."

"Watching all this," said Graves, "could be tricky with a big project. Things could be all over the place."

### The Gantt Chart Revisited

"Thank you, Marty," said Lee. "That problem leads us back to our Gantt chart.

"Can we change it somehow to pick up the necessary details of slack time and the critical path? Of course I wouldn't ask the question if the answer were not 'yes.'"

Lee showed them an enhanced Gantt chart:

```
                          TIME (MINUTES)
JOB      0          50         100        150        200
         +----------+----------+----------+----------+
SHOP     ICCCCCCCCCCCC
PREP     I           CCCCCC
SALAD    I           XXXXXXX.......
COOK     I                    CCCCCCCC
SERVE    I                            CC

TIME OF COMPLETION =  29
```

"Notice how we get this chart to tell us about how our tasks are ordered. We turn any job on the critical path into 'C's. If a job is not critical, it will have some dots after the 'X's to indicate the available slack when it starts as early as possible."

"How did the computer know what was on the critical path?" asked Grasso. "Did we give it some additional information?"

"We gave it some new information and we took out some old information," said Lee. "Most importantly, we wrote a new part of the program to have the computer figure out several things.

"Lets's begin at the end. The Gantt chart reveals each job's name, its length, its early start, and its slack."

"That means," said Graves, "that the program has to know the late start as well, because the slack is the early start minus the late start."

"That's right," agreed Lee. "But all we really need to see is the slack. The slack also gives us a clue about the sequence of jobs. The slack extends until it's time for the next job to begin, so we may infer most of the network from the diagram as it stands. We don't need anything else to manage the project. We print the numbers in a table that follows the Gantt chart:

| | | STARTS | | |
|---|---|---|---|---|
| JOB | LENGTH | EARLY | LATE | SLACK |
| SHOP | 12 | 1 | 1 | 0 |
| PREP | 6 | 13 | 13 | 0 |
| SALAD | 7 | 13 | 20 | 7 |
| COOK | 8 | 19 | 19 | 0 |
| SERVE | 2 | 27 | 27 | 0 |

"The part of the program that prints out the table and the chart will be reviewed later. A more interesting thing to explore is the initial data that the program requires."

### The Predecessor Table

"We must tell the program which jobs are connected to which other jobs. One way to do this is to announce the new job's predecessors when we introduce a new job. So the information for our dinner project might look like this:"

```
2200    DATA BEGIN, NO-MORE
2205    DATA SHOP, BEGIN, NO-MORE
2210    DATA PREP, SHOP, NO-MORE
2215    DATA SALAD, SHOP, NO-MORE
2220    DATA COOK, PREP, NO-MORE
2225    DATA SERVE, COOK, SALAD, NO-MORE
2230    DATA END, SERVE, NO-MORE
2255
```

"What's that NO-MORE mean? asked Grant. "There is no job called that."

"It's a way to tell the program that there are no more predecessors for a given job. Because we do not know in advance how many predecessors a job will have, we let the program keep reading predecessors until it finds a NO-MORE, a roadblock that says 'end of the line.'"

"A question," said Grasso, "Look at PREP. It has only SHOP for a predecessor. Why isn't BEGIN there too? It precedes PREP."

"Good question," said Lee. "Notice that BEGIN is not an immediate predecessor. You can travel back from PREP to SHOP and from SHOP to BEGIN, so immediate predecessors are all we really require to compose the network of the project.

"The program takes this information and creates a table that looks like this:

| Job number I = \ Job number J = | 1 | 2 | 3 | 4 | 5 | 6 | 7 |
|---|---|---|---|---|---|---|---|
| 1 | 0 | 0 | 0 | 0 | 0 | 0 | 0 |
| 2 | 1 | 0 | 0 | 0 | 0 | 0 | 0 |
| 3 | 0 | 1 | 0 | 0 | 0 | 0 | 0 |
| 4 | 0 | 1 | 0 | 0 | 0 | 0 | 0 |
| 5 | 0 | 0 | 1 | 0 | 0 | 0 | 0 |
| 6 | 0 | 0 | 0 | 1 | 1 | 0 | 0 |
| 7 | 0 | 0 | 0 | 0 | 0 | 1 | 0 |

**Fig. 6-2** A Predecessor Table

"A '1' indicates that for a job, I, the job J comes before it. So if the table is called P(), the program can look at all the Js for a given and find the P(I,J)s that are '1' and know that job J precedes job I."

"I don't think I understood that," said Graves, "Would you go over that again?"

# Your IBM personal computer deserves an Amdek Color-II monitor

To take maximum advantage of all your new IBM Personal Computer can do, you need a compatible monitor with extensive capabilities of its own. And for that, there's simply no better choice than Color-II from Amdek.

Color-II's high-resolution colors can help you visualize and analyze the most complex data. Whether you need your IBM for word processing, graphics, business analogy or scientific applications, Color-II has the display technology you need to utilize your IBM to the fullest.

**Color-II features include:**

- RGB input for high-resolution graphics and more vibrant colors.
- 80 x 24 character display.
- 560(H) x 260(V) resolution.
- Intensification modulation for 16 color capability to match IBM's high resolution colors.
- IBM plug compatible cable and connector.
- Molded-in carrying handle for easy portability.
- Front-mounted controls for quick adjustments.
- Complete with one-year warranty covering all parts and labor; two-year warranty on picture tube.

So for the most efficient, effective use of your IBM computer, ask your dealer about the remarkable Color-II, part of Amdek's complete line of color, green phosphor and black & white video monitors. Then match Color-II's performance and price against any other high-resolution monitor. For quality and value, you'll choose Amdek.

# Turn To The Future With COMPUTE! Publications

## The Beginner's Guide To Buying A Personal Computer

A Novice's handbook of useful, helpful information designed to teach you the basics of evaluating and selecting a personal computer. Written in plain English for the interested beginner. Complete with personal computer specification charts and buyer's guide. Applicable to home, educational, and small business buyers. ISBN 0-942386-03-5. Paperback. $3.95.

## Inside Atari DOS

From the authors of the Atari Disk Operating System, an exciting step-by-step guide to the DOS software. Complete with listings of commented source code and detailed explanations of each module of code. Author: Bill Wilkinson, Optimized Systems Software, Inc. Spiral bound for ease of access to listings. For Intermediate to Advanced Atari Users. ISBN 0-942386-02-7. Paperback. $19.95

## COMPUTE!'s First Book Of Atari

192 pages of useful, informative applications and programs from **COMPUTE!** magazine issues now out of print. Includes previously unpublished information including Memory Map. Contents include such articles and programs as "Adding A Voice Track to Atari Programs," "Designing Your Own Atari Graphics Modes," and "Inside Atari BASIC." Spiral bound for ease of access to listings. For Beginner level to Advanced Atari users. ISBN 0-942386-00-0. Paperback. $12.95.

## COMPUTE!'s First Book Of PET/CBM

256 pages of Commodore PET and CBM articles from **COMPUTE!** magazine issues now out of print. Includes such classic articles and programs as "Feed Your PET Some Applesoft," "Disk Lister: A Disk Cataloging Program." and "Cross Reference For The PET." Spiral bound for ease of access. ISBN 0-942386-01-9. Paperback. $12.95.

**COMPUTE! Books** invites dealer inquiries. Call the Toll Free Number below for Dealer Information.

"Sure," said Lee. "If you start with a row, a job, then you can look across the row and find which columns have 1s and know what the immediate predecessors of the job are."

"Okay, if that's all there is to it, then I understand," said Graves. "But let me check. Does what you just said mean that if I pick a column, I can search down it and find the jobs that follow?"

"Took the words right out of my mouth," said Lee. "That's right. So what this table gives you is an easy way, if you are a computer program, to crawl around the network.

"One advantage of having the network in the program is that we can let the program figure out the starting times. We no longer need to provide that information. The only other necessary information besides the predecessors is the length of each job. We can enter that on one line of data like this:

```
2085      FOR J = 1 TO N
2090          READ L(J)
2095      NEXT J
2100      DATA 1, 12, 6, 7, 8, 2, 0
2105 '
```

"The program itself then does what we did by hand. It computes the early starts, the late starts, and the slack. When it has this information in hand, it prints out the enhanced Gantt chart and the table."

"That program," asked Grasso, "can we get a copy of it?"

"Sure," said Lee. "As a matter of fact, we're going to spend a little while with this program right now. Each of you should sketch out a project by jobs, with the network of predecessors and the length of each job. After you get it roughed out on paper we will type it into the program and see what the results look like.

"By the way, our enhanced Gantt chart solves the guest-cook problem: we want dinner on time so we keep the guest off the critical path. Our guest cook will help by making the salad."

```

The gross outline of the program is revealed by the subroutines that the main routine invokes. Each subroutine performs a task in a fashion similar to the discussion in the text. To discover the details of how any piece of code works, the reader must finally take a close look at it one line at a time. Anyone who wishes to explore the workings of these subroutines should get a piece of scrap paper and do just that: work through the code and take notes.

**Exercises**

1. Run CPM-I on your computer and verify that the results are the same as in the example in text.
2. Draw up a network for a project of your own and enter the predecessor table and job lengths in CPM-I. Try a run.

**Scheduling with a Scarce Resource**

By lunch time everyone had successfully used the computer to produce an enhanced Gantt chart of a project for a Deer Division product line. All three product managers were enthusiastic about their new plans. After lunch they reassembled in the conference room.

"This afternoon," began George Lee, "we are going to help two trolls named Tread and Truss build a bridge to live under. Their problem is the same one we had this morning but with one extra feature: they have a scarce resource. The enhanced Gantt chart for their project looks like this:"

```
                                          TIME-DAYS
JOB              0         10        20        30        40
                 +---------+---------+---------+---------+

RIGHT PIER       IXXX.....
LEFT PIER        IXXX.....
DAM              ICCCCCCCC
CENTER PIER      I       CCCCCCC
BEAMS            I             CC
PLANKS           I               CCCCC
REMOVE DAM       I                   C
```

"So far the project looks feasible. But here's the problem. It takes two trolls to dam the stream. It takes only one troll to build a bridge pier. It takes two trolls to lay the log beams on the piers and it takes two trolls to plank the log beams. One troll can remove the dam. Their scarce resource is trolls. All of what has been said can be summed up in the following data:

| JOB | LENGTH OF JOB | RESOURCE USED | START | SLACK |
|---|---|---|---|---|
| RIGHT PIER | 3 | 1 | 9 | 4 |
| LEFT PIER | 3 | 1 | 12 | 1 |
| DAM | 8 | 2 | 1 | 0 |
| CENTER PIER | 7 | 1 | 9 | 0 |
| BEAMS | 2 | 2 | 16 | 0 |
| PLANKS | 5 | 2 | 18 | 0 |
| REMOVE DAM | 1 | 1 | 23 | 0 |

# SAVE/ on Software for APPLE II®

## CLEARANCE SPECIAL-50% OFF
## ON THE FOLLOWING APPLE PROGRAMS

**APEX**—The assembly language operating system for the Apple II—Total control of your Apple—fast program loading and execution—Flexibility—Efficiency.
**Now only .....$50.00**

**XPLO**—A Block Structured—Pascal type high level language operating under APEX
**Now only .....$40.00**

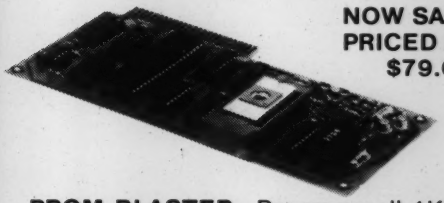
**HANDY DISK**—Utility programs and device handlers for the APEX operating system—A powerful alternative to Apple DOS.
**Now Only .....$20.00**

## MORE APPLE SPECIALS

**PASCAL GENERAL LEDGER**—Menu driven general ledger program based on the Osborne System. Customized utility for a true turn-key general ledger system.

Reg ..... $149.00

**NOW SALE PRICED AT $79.00**



**PROM BLASTER**—Programs all 1K to 4K PROMS of 25XX & 27XX single or multi-voltage types—With all personality modules and read/write software.
**$149.00**

**THE EXTENDER** by Scott Knaster. With Apparat's new Apple software package, The Extender, you can use the full power of PRINT USING from Applesoft, determine the amount of free space remaining on a diskette from within your programs, generate automatic line numbers, and much more.

The Extender provides 15 powerful statements and functions to make Applesoft programming easier. These commands add to your capability in business applications, graphics, debugging, disk management, and advanced programming.

Here is a brief description of some of the commands provided:

- PRINT USNG - Easily formats output in columns, with automatic rounding, floating dollar sign, asterisk fill, preceding or trailing sign, and more features than any other similar system.
- AUT - Provides computer-generated automatic line numbers.
- DEC and HEX - Provide built-in conversion between hex and decimal. These functions can be used with POKE, PEEK, and CALL statements for easy programming.
- DISKFR - Instantly computes the amount of disk space free on any standard DOS 3.2 or 3.3 diskette.
- EDIT - Allows easier editing of Applesoft program lines by providing full-widths listing. Eliminates typing POKE 33,33 to eliminate spaces.

The Extender works with your Applesoft programs by using the '&' command. Just boot with the Extender disk, then run, edit, or change your programs as usual, with all the power of these 15 additions at your fingertips.

The Extender comes on a 3.2 diskette and is fully compatible with both DOS versions 3.2 and 3.3. The Extender requires an Apple II or Apple II Plus with at least 32K, Applesoft in ROM or Language System, and a minimum of one disk drive.

Complete documentation is included with examples of usage for clarity and ease of implementation.

**NOW HALF PRICE! only .....$25.00**

## MISCELLANEOUS SUPPLIES

### DISKETTES

Double density, soft sectored, replacement guaranteed, Spindle/Hub protected. (5¼" only)
Verbatim Datalife 5¼" 40 track ..... $24.95

### PAPER

8½"x11" blank white, tractor feed paper, full box..... $24.95
8½"x11" blank white, tractor feed paper, half box..... $14.95
14½"x11" green bar, tractor feed paper, full box ..... $34.95
3½"x15/16" tractor feed mailing labels ..... $19.95

### OTHER

5¼" plastic library case ..... $ 1.95
5¼" Flip-sort..... $21.95
16K memory kits..... $19.95

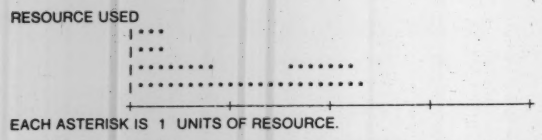
"The resource histogram that accompanies the above data looks like this:



"The present plan requires four trolls for times 1 to 3. Only two trolls exist. They are the scarce resource. Trend and Truss looked at this situation and they delayed the start of their left and right piers to 9 and 12.

"When they ran CPM-II a second time they saw they had solved their problem:

"This time their resource requirements stayed within their limits. At no time did the plan require more than the two trolls they had available. The plan was a workable solution given their scarce resource. They set to work."

"What happens," asked Grant, "If part of a job takes two trolls and part of a job takes only one troll?"

"There are two ways to handle that contingency," said Lee. "First, you can say the job takes 1.5 people. If you don't like that approach, you break the job into two jobs, one with two people and one with one person."

"Is it correct to say," asked Grasso, "that you plan to run the program several times before you get it right?"

"Yes," nodded Lee.

"Then why don't you have the program do the adjusting?" Grasso continued.

"It's possible," agreed Lee, "but the program is more flexible when you stay in charge. You lose a few minutes juggling jobs, but you gain a solution that is exactly the one you want. The trolls might have a friend and decide to invite her over if they wanted to speed up the project. If she could come, they might want to shorten the length of some jobs and increase their resources to three. For example, the planking could be finished faster. The point is that the trolls retain a great deal of flexibility by using a program that keeps them in control."

"I think I hear you saying, 'Stay loose,' " said Grasso. "I'm willing to give it a try. Maybe it's not such a bad idea. I know my plans are always a balancing act. I can see how I would cycle around several times before I had just the right solution."

"We are going to do that right now." said Lee. "Each of the plans we made this morning has to be revised to include a resource. It can be dollars per week, man-days, man-hours, or anything else you wish. You have to tie some resource to each job, put in the length and start time, and look at the results. If you exceed some reasonable resource limits, reschedule some jobs and rerun CPM-II until things work."

FOCUS ON THE GALAXY OF APPLE II* SOFTWARE WITH PEELINGS II

With a galaxy of Apple II software now available it is comforting to know there is a magazine dedicated entirely to software evaluation...Peelings II.

Peelings II provides in-depth, critical but fair reviews of the broad spectrum of Apple II software: business, scientific and educational software; word processors, games and utility programs...you name it.

The truth concerning Apple II software is what Peelings II is all about...can you afford to be without it?

PEELINGS II
THE MAGAZINE OF APPLE SOFTWARE EVALUATION
(Now in its third year of publication)

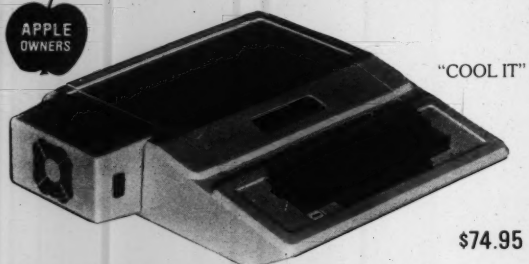
SUPER FAN II
FOR YOUR APPLE II COMPUTER*

APPLE OWNERS



"COOL IT"

$74.95

- CLIPS ON—NO HOLES OR SCREWS • REPLACEABLE SWITCH
- AVAILABLE IN 120V OR 240V AND 50/60HZ • DURABLE MOTOR
- REDUCES HEAT CAUSED BY EXTRA PLUG-IN CARDS
- INCREASED RELIABILITY—SAVES DOWN TIME AND REPAIR CHARGES
- TAN OR BLACK COLOR
- LOW NOISE DUE TO DRAWING EFFECT OF AIR THROUGH YOUR COMPUTER AND SPECIAL FAN AND MOTOR DESIGN
- "QUIETEST FAN ON THE MARKET"
- EXTRA 120V OUTLET FOR MONITOR OR ACCESSORIES TURNS ON WHEN YOU TURN ON YOUR FAN (NOT AVAILABLE ON 240V MODEL)
- SOLD WORLD WIDE • UNIQUE 1 YEAR WARRANTY

**HOW TO HOOK IT UP:** 1) Clip it on your APPLE. 2) Unplug your 120V cable (you won't need it). 3) Plug short 120V cable from Super Fan II to the back of your computer. 4) Plug the supply cable from Super Fan II to your 120V power source. 5) Turn on the rocker switch and a built-in, red, ready light comes on. 6) You are all set to "COOL IT.' This switch also turns your computer "off" and "on."

*Plus 6% California Sales Tax and $2.50 shipping charge per item.

The second critical-path program works very much like the first program in its various subroutines. It does differ, however, in some ways from the first program. The most obvious difference is that a resource is associated with each job. This addition leads to a little new programming logic. The program still figures out the Gantt chart as before. But now, after the chart is drawn, the program adds down the page in each time unit to see what the total resource being used at a given time is. The results of this calculation are graphed in the resource histogram, sometimes called a resource density chart, which appears right below the Gantt chart.

The second way this program differs from its predecessor is that the user enters the starting times. Starting times must be under the user's control if he or she is to be able to delay select projects to make the resource histogram stay within bounds. The portion of the program that computed starting times in CPM-I has been converted to checking starting times in CPM-II. The program checks starts now because a user can make a mistake and start a new job before its predecessors have finished.

**Exercises**

1. Modify your project from CPM-I to include both a resource and a starting time for each job. Try it with CPM-II.
2. Sometimes it is interesting to see how the resources accumulate as the project proceeds. Write an additional subroutine to print the cummulative resource used. Try to make the graph square—from 0 to 100 percent of the resource on the vertical axis. □

# Seeing NCC

*Will Fastie*

It's NCC time again.

Right about now, many journalists and their editors will begin the annual ritual of complaining about the National Computer Conference. This ritual is a long one, beginning just before the show and lasting several months, giving everyone enough time to get into print.

The complaints? The show is too big. The original purpose of the gathering has been lost; the exhibits overwhelm. The show is too big to fit in any one place. How about a return to the past—an East and West show? The show is too expensive for the exhibitors for what they get out of it. The show belongs to the bigger exhibitors. And so on.

Each of the complaints has a following, and substantial evidence to support it. I'm not too concerned with these kinds of issues, though. It's more important to decide if the NCC is of value, and if so, how to tap it for your own purposes.

**A Personal Perspective**

In my opinion, the show (exhibit area) has enormous value and the conference has little. For the past five years, I have sent a representative from my department to the conference and attended the exhibits personally. The unanimous opinion of the conference attendees has been that the time was not well spent. (We have gotten considerably more value from specialized technical conferences.) We have returned the NCC Proceedings to our Technical Library, where they are seldom read.

On the other hand, we have usually gotten our money's worth from the show. The opportunity to speak with suppliers whom we have not met, the chance to see new products "in the flesh," and the ability to do these things many times in the space of one or two days has convinced me that the NCC plays an important role.

Curiously, we usually do not learn of new products at the show. As a development group, charged with the responsibility of keeping our knowledge current, we typically learn of most "new" products well in advance of the show. If anything, the NCC lets us see, touch, and feel the things—it's a reality test.

There are surprises, though, and things to learn. I've found most of these in the small booths, off the beaten path. Last year they were in the basement. The year before, they were at the Disneyland Hotel, at the Personal Computing exhibits. They are not likely to catch your eye, and they might even be hard to find. But do find them. They're where the action is.

***If you haven't made arrangements for the trip, it's too late.***

**Deciding To Go**

There are usually two people involved in determining whether you attend the NCC: you and your boss.

If your company is going to send you to the NCC, they should get a reasonable return on their investment. Sure, you'll get a chance to fool around and eat a couple of great meals, but it's so easy to bring the value back that there is really no excuse for an empty trip report. What you must do is consider in advance, before you set foot on the plane, what it is you want to learn. What is the mission? Think it out carefully, take notes, and prepare to justify.

If you are the boss, deciding who and how many to send is the problem. Some of the decisions are pre-ordained if the trip is part of a reward system. The rest should be based on protecting your investment, on accomplishing something of value to your company.

**Making the Arrangements**

If you haven't made arrangements for the trip, it's too late. Oh you can stand in line to register for the NCC all right, but you'll have to sleep at Biff's Deluxe Motel & All Night Taxi Stand—it'll be the only thing left. The time to make your plans is in June, right after you get back from this one.

By January next year you should have your plastics from AFIPS, your hotel form in the mail, your plane reservations, and your itinerary cast in concrete. Then you can breeze past the lines, see the exhibits, attend the conference, and relax in a nice hotel each night.

If you are dying to try a particular restaurant, don't wait until you get there to make the reservation. Call a week or two in advance. There will be between 10 and 15 thousand people competing for those reservations each day of the show.

If you can avoid renting a car, do so. However, don't count on the NCC shuttle bus service. Plan on using taxicabs. Cabs are usually a good deal if you grab two other people to ride with you and split the fare. If you must rent a car, give someone else a ride.

**Seeing the Show**

Once you are there and ready to work, accomplish your mission first. This show is *big*, and if you've never been before,

W. H. Fastie, 7110 Sheffield Road, Baltimore, MD 21212.

## At last:
## a copy program that doesn't.

**Doesn't make bad copies.** PenultiCopy's duplication process includes a bit by bit comparison of the original and the copied disk.

**Doesn't take all day.** PenultiCopy copies 13-sector disks in less than 40 seconds, 16-sector in less than 45 seconds — all with one program.

**Doesn't leave you wondering.** Are your backup copies good? Can your other drive read them? PenultiCopy gives you an independent verify mode to double check.

**Doesn't choke on bad disks.** PenultiCopy signals you immediately if it finds a defect.

$34.95 at your local Apple dealer. For an Apple® II with 48K.

**ALF** 1448 Estes Denver, CO 80215 (303) 234-0871

### NCC, continued...

you'll be surprised to find out how long it takes to see.

It can't be done effectively in one day. In order to do that, you must not speak to anyone and you must not stop walking. Don't even think about using the restrooms. And for heaven's sake, don't pick up any literature.

On the other hand, if you have two days, you may do all of the above, although you should avoid getting too interested in any one thing. Three days is fat city—you can even dawdle at a few booths.

Finally, the literature. If there is a brochure you can't live without, or something your boss has to see the second you get back, pick it up. Otherwise, hand the boothperson your badge and have the information sent to you.

If you do pick up anything, a bag is a must. The Datamation ones are the best. They are paper and must be cared for, but the handles are nicer and won't cut your hand to shreds. Take a handkerchief to wrap around them, just in case.

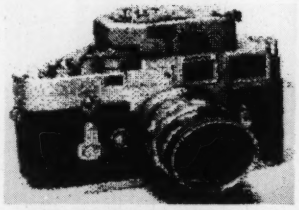
Think I'm kidding? Well, how much do 75 1/2-ounce brochures weigh? At 5:00 p.m., the answer is 50 pounds. And pick up the NCC Proceedings late in the day, so you don't have to carry it around. It weighs at least 50 pounds all by itself! Best hint of all: take a bigger suitcase than you need, so you'll have room for all your junk on the return trip.

See you there. Good luck! □

## LET YOUR APPLE SEE THE WORLD!

**The DS-65 Digisector® opens up a whole new world for your Apple II. Your computer can now be a part of the action, taking pictures to amuse your friends, watching your house while you're away, taking computer portraits . . . the applications abound! The DS-65 is a random access video digitizer. It converts a TV camera's output into digital information your computer can process. The DS-65 features:**

- **High Resolution** — a 256 × 256 picture element scan
- **Precision** — 64 levels of grey scale
- **Versatility** — Accepts either NTSC or industrial video input
- **Economy** — A professional tool priced for the hobbyist



HI-RES PICTURE USING THE DS-65 AND PICTURE SCANNER SOFTWARE

The DS-65 is an intelligent peripheral card with on-board software in 2708 EPROM. Check these software features:

- Full screen scans directly to Apple Hi-Res screen
- Easy random access digitizing by Basic programs
- Line-scan digitizing for reading charts or tracking objects
- Utility functions for clearing and copying the Hi-Res screen

Use the DS-65 for precision security systems; computer portraiture; robotics; fast to slow scan conversion; moving target indicators; reading UPC codes, musical scores and paper tape and more! **GIVE YOUR APPLE THE GIFT OF SIGHT!** DS-65 Price: $349.95 / FSII Camera Price: $299.00 / Combination Price: $599.00

***ADDITIONAL SOFTWARE FOR THE DS-65***

**—Picture Scanner:** Provides a variety of different dithering algorithms for compressing the digitized image into the Hi-Res screen. Available on 13-sector disk. Price: $39.95

**—Superscan:** Enables you to enhance the DS-65's Hi-Res pictures with colors! Choose from 21 different colors and assign them to grey scale values, modify pictures, zoom, enhance contrast, etc. Print routines for the Anadex and Paper Tiger* are provided. Comes on a 13-sector disk. Written for The Micro Works by Magna Soft. Price: $79.95

**—Portrait System Software:** This program includes captions and a credit line, reverse printing for T-shirt application and the option to save portraits on disk. Specifically for use with a Malibu 165 printer. Call or write for more information.

*Paper Tiger is a trademark of Integral Data Systems, Inc.

THE MICRO WORKS P.O. BOX 1110 DEL MAR, CA 92014 714-942-2400

# Prime Time

Donald T. Piele

Of all the problems that have been posed in this column since it began back in September of 1980, none has generated more reader interest than the super fast prime generating program that appeared in December, 1981. I have received letters from doctors, lawyers, teachers, students, and hobbyists. The letters carried postmarks from all over the United States and a few foreign countries. I feel fortunate to be the recipient of this mail, because I can always count on picking up a new idea or two for looking at a problem in a slightly different way.

Generating prime numbers is probably one of the most familiar problems around. In 1959 when I first encountered this problem in a college computer course, the programming had to be done in machine language on the IBM 650.

As I recall, it was very tedious. The program had to be entered via punched cards, and completing a session was slow work.

There was little concern at that time about the efficiency of the program. We just hoped the thing would run.

The students in the class were well prepared mathematically, but when it came to communicating with the computer, we were all just beginners. It was an interesting experience, but much too frustrating and laborious to be taken seriously. All but the most patient among us returned to the comfort of our respective disciplines confident that someone who hadn't worked with the computer hadn't missed much. That was in 1958.

Today the picture has changed completely. A prime generating programming problem is one a good junior high school student can write in Basic. In fact it is becoming increasingly easy to assign programming problems that examine a wide variety of mathematical concepts to younger and younger students. The following discussion is designed to be understandable to a rank beginner.

**Prime Factorization**

Factoring a number into its unique product of prime numbers is something every school child learns how to do by the seventh grade:

$21 = 7 \times 3$

$100 = 5 \times 5 \times 2 \times 2.$

What Basic programming skills are necessary to program a computer to automate this process?

1. How to input a number into a program.

INPUT N

2. How to use the integer value function (INT(X)) to check for divisibility of one integer by another. Recall INT (X) equals the largest integer less than or equal to X.

INT(2) = 2, INT(2.5) = 2, INT(2.9) = 2, INT(3) = 3.

Thus, we can check whether a factor F divides evenly into an integer N by comparing the quotient N/F with INT(N/F).

IF N/F = INT(N/F) THEN (F is a factor of N).

3. How to generate a sequence of numbers 2, 3, 5, 7, 9, 11 . . . to serve as possible factors.

```
1  F = 1
2  F = F + 1
3  IF F > 3 THEN F = F + 1
4  GOTO 2
```

4. How to print out a factor and replace the original number with the quotient.

```
PRINT F,
N = N/F
```

5. How to test when there are no factors remaining.

IF N = 1 THEN done.

Putting these skills together, we have the following bare bones program for prime factorization:

```
 10 PRINT "PRIME FACTORIZATION"
 20 REM
 30 INPUT "Enter a positive integer ";N
 40 F = 1
 50 F = F + 1
 60 IF F > 3 THEN F = F + 1
 70 REM
 80 IF N/F <> INT(N/F) THEN 50
 90   PRINT F;
100      N=N/F
110      IF N = 1 THEN PRINT : END
120 PRINT "x";
130  GOTO 40
```

Run this program with numbers such as 100, 195, and 1001, where all the prime factors are relatively small

Donald T. Piele, Dept. of Mathematics, University of Wisconsin-Parkside, Box 2000, Kenosha, WI 53141.

...Everything from Apple II to Zork II at the lowest possible prices.

But low prices are only one feature of our new catalog. We think you'll find it to be a very well-organized, well-written reference tool.

When you receive our catalog, you get with it our commitment to help you keep it up to date.

Unlike most catalogs that are obsolete the moment they're printed, ours was specifically designed to deal with the rapid-fire changes in microcomputer hard and software. Its loose-leaf binder format makes it a snap to add the new pages we'll send out on a regular basis.

Our catalog was developed on exactly the same principles as our business — to offer you the lowest possible prices combined with the highest quality of service.

new catalog, our great prices.

(1001 = 7×11×13), and this program is fast. Try a number like 1234567 and see what happens. It takes three minutes on an Apple II to find the prime factorization: 1234567 = 127×9721.

Albert Nijenhuis, a reader from Philadelphia, saw this program in the January 1982 issue of *Creative Computing* (page 161) and suggested a one line addition which cut the time for the above factorization to three seconds—a speed-up factor of 60. This idea is often found in prime factorization programs and is based upon a simple mathematical observation: If N is not prime, then it can be factored, N = F×G, and one of the factors F or G must be less than or equal to the square root of N. (If both F and G are greater than the square root of N then F×G would be greater than N, a contradiction.)

How is this fact used to cut the speed of this program drastically? Simply stop looking for prime factors of N once the candidates F are larger than the square root of N. This is done by adding line

70 IF F*F > N THEN F = N: GOTO 90

Improving the speed of a computer program requires the same type of insight that we often associate with problem solving in mathematics. As a skill, it is difficult to teach; the best way I know is to study lots of examples. Let's continue.

**Generating Prime Numbers**

I learned two facts about the problem of writing a fast Basic program to generate the prime numbers between 2 and 1000: everyone has a favorite program, and every program can be improved.

One way to generate the prime numbers between 2 and 1000 would be to check every odd number between 3 and 999 for its prime factors using the program listed above and to print out those that had only one factor, themselves. This will do the job, but it is very slow—especially toward the end of the list. A much faster procedure uses the Sieve of Eratosthenes [1].

To see how the sieve produces the primes from 2 to 999, begin with the top row in Table 1. This row contains all of the integers from 2 to 1000. Each succeeding row results from crossing out numbers from the row above it according to the following rule:

*Start from the left and circle the first non-circled number. Now cross out all multiples of the circled number.*

The bottom line is the set of prime numbers.

| Row | | | | | | | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| 1: | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 | 13 | 14 | 15 | 16 | 17 |
| 2: | (2) | 3 | × | 5 | × | 7 | × | 9 | × | 11 | × | 13 | × | 15 | × | 17 |
| 3: | (2) | (3) | × | 5 | × | 7 | × | × | × | 11 | × | 13 | × | × | × | 17 |
| 12: | (2) | (3) | × | (5) | × | (7) | × | × | × | (11) | × | (13) | × | × | × | (17) |

*Table 1. Sieve of Eratosthenes*

What Basic programming skills are needed to program a computer to automate this process?

1. How to initialize an array.

```
DIM X(1000)
FOR I = 2 TO 1000
  X(I) = I
NEXT I
```

2. How to delete multiples of P.

```
FOR I = 2*P TO 1000 STEP P
  X(I) = 0
NEXT I
```

3. How to find the next available prime.

```
FOR J = P+1 TO 1000
  IF X(J)>0 THEN P = J : (go to step 2.)
NEXT I
```

Putting these skills together, we have in Listing 1, the standard sieve program for finding the primes between 2 and 1000.

*Listing 1.*

```
 10 PRINT "SIEVE OF ERATOSTHENES - STANDARD"
 20 REM
 30     DIM X(1000)
 40     FOR I=1 TO 1000
 50       X(I)=1
 60     NEXT I
 70 :
 80     P=2
 90     PRINT P;
100 :
110     IF 2*P>1000 THEN 160
120       FOR I=2*P TO 1000 STEP P
130         X(I)=0
140       NEXT I
150 :
160     FOR J=P+1 TO 1000
170       IF X(J)>0 THEN P=J : GOTO 90
180     NEXT J
190 END
```

This program takes 25 seconds to generate the primes between 2 and 1000 on an Apple II. How much time can be saved by using insight?

First let's look at the mathematics:

1. In the sieve algorithm it was indicated that, once a number is circled, its multiples are to be deleted. But in reality, many of those multiples have already been deleted; the first multiple of P that has not been deleted already is P*P. Test it out with paper and pencil.

2. Stepping by P in line 120 is also a duplication of effort, since it stops at P*P + P = P (P+1), which is an even number (odd×even = even). The same is true for 3*P, 5*P and so forth. Thus it is to our advantage to step by 2*P.

To implement these two ideas, change lines 110 and 120 as follows:

```
110 IF P*P > 1000 THEN 160
120 FOR I = P*P TO 1000 STEP 2*P
```

3. Finally, since 2 is the only even prime, we can eliminate the even numbers in the initialization phase, line 40.

```
40 FOR I = 1 to 999 STEP 2
```

With these modifications, the time for this program on the Apple II drops to 16 seconds.

To make a quantum leap in time savings we need a real breakthrough. If we reverse the way we keep track of the numbers in the sieve, we can skip the initialization process (lines 40-60). In most systems, an array is automatically initialized with zeros once it is dimensioned—Atari is the exception. Thus, if we let the 0 in the array X(I) mean that I is prime and design the algorithm to place a 1 in the location X(I) when I is not prime, we can eliminate the time for initialization.

Other factors help in little ways:

1. Use of an integer valued array X%(1000).

2. Use of IF X%(P) THEN . . . in place of IF X% (P) = 1 THEN . . .

3. Use of STEP P + P in place of STEP 2*P.

4. Slight rearrangement of the branching in the program.

Putting these suggestions all together in one program results in the truly super-fast algorithm shown in Listing 2.

*Listing 2.*

```
 10 REM Sieve of Eratosthenes - Super Fast
 20 DIM X%(1000)
 30   PRINT "2";
 40   FOR P=3 TO 31 STEP 2
 50     IF X%(P) THEN NEXT
 60   PRINT P;
 70     FOR J=P*P TO 997 STEP P+P
 80       X%(J)=1
 90     NEXT
100   NEXT
110   FOR P=33 TO 997 STEP 2
120     IF X%(P) THEN NEXT
130     PRINT P;
140   NEXT
150 END
```

Any program can be speeded up by deleting the REMs and putting multiple statements on one line. When this is done with the program in Listing 2, the time of execution on the Apple

# HUNTINGTON COMPUTING

## MECC Educational Software

MECC Educational software has long been recognized for its excellence. Now, Huntington Computing is proud to be distributor of this fine software.

Why buy MECC Software from Huntington rather than someone else? Because the MECC software we sell includes a free backup for every program ordered. Also, all our MECC software will boot directly on DOS 3.2 or DOS 3.3 without using the Basic disk. And, the documentation is easy to use.

## *Softlights*

**By Fred Huntington**

We're sorry to have kept all you nice people waiting for your catalogs but they're finally done. If somehow we have missed you, please call or write and we'll send one right out to you.

The new catalog is in a new format and larger than ever. Best of all, it's actually divided according to subject and in alphabetical order.

You may notice that a couple of lines we used to carry are no longer in the catalog. When we get a lot of complaints, we refuse to sell the line anymore. Please let me know if you get programs that aren't worth the money. I'll personally either complain to the manufacturer, drop the line, or both.

We try to preview most of the software we carry, but we have over 2,000 programs in stock, so it sometimes becomes difficult.

### Advanced Operating Systems

Here's a new line we picked up recently that we think has a lot of class, Advanced Operating Systems. Their **Voyage of the Valkyrie** is a combination adventure, arcade game that will keep you occupied for hours. They also have a slick group of utilities called Apple-Aids.

Do people actually read this column (which is really an advertisement)? Let's find out. If you order **Voyage of the Valkyrie,** just say you saw it in ***"Softlights"*** and you can have it for **$24.99** instead of the regular list price of $39.95. Offer absolutely ends July 30, 1982.

We also have ADS's new **PROGRAMMER** for the Apple* and IBM. This is a great new program that will actually program for you. Looks fantastic.

### Great Grandma Huntinton Contest

Don't forget the Great Grandma Huntington contest. See full details in last month's Softlights. The prize is a genuine Epson watch.

### A Zeitgeist?

Here's a new company, Zeitgeist, that is near us (almost in the cotton fields but not quite) that makes a very nice series of educational programs. They list for $49.50 each and our price is **$43.99** each. All need AS 48K. They are:

INVADER ATTACK (addition/subtraction of fractions)

INVADER ROUNDUP (addition/subtraction of whole numbers)

SPACE MOUSE (multiplication/division of fractions)

SPACE SCANNER (multiplication/division of whole numbers)

### AURORA

| | | |
|---|---|---|
| #4801 | Executive Secretary | $212.50 |
| #4804 | Hebrew II | $50.99 |
| #4805 | Quicktrace | $42.99 |
| #4810 | Versacalc 3.3 | $84.99 |

### BEAGLE BROS.

| | | |
|---|---|---|
| #3257 | Alpha Plot | $34.69 |
| #3255 | Doss Boss 3.2 | $30.39 |
| #3250 | Doss Boss 3.3 | $30.39 |
| #3251 | Game Pack #1 | $30.39 |
| #3252 | Game Pack #2 | $30.39 |
| #3253 | Game Pack #3 | $30.39 |
| #3254 | Game Pack #4 | $30.39 |
| #3256 | Utility City | $35.89 |

### CONDUIT

| | | |
|---|---|---|
| #7360 | Algebra Drill & Practice I | $125.99 |
| #7367 | Demo-Graphics | $91.79 |
| #7362 | Group Velocity | $68.49 |
| #7368 | SAMP – Survey Sample | $70.19 |
| #7364 | Satellite Orbits | $34.89 |
| #7365 | Scatter – Nuclear Scatter | $34.89 |

### DAKIN 5

| | | |
|---|---|---|
| #3104 | Alkemstone | $34.99 |
| #3106 | The Depreciation Planner | $347.89 |
| #3101 | Dragon Fire | $35.09 |
| #3102 | Kaves of Karkhan | $42.39 |
| #3105 | Neutrons | $26.39 |
| #3103 | Rings of Saturn | $33.89 |

### EPYX

| | | |
|---|---|---|
| #1514 | Crush, Crumble, & Chomp | $25.39 |
| #1513 | Dragon's Eye | $31.19 |
| #1509 | Hellfire Warrior | $33.99 |
| #1516 | Keys of Acheron | $16.89 |
| #1505 | 3-Pack Special | $42.39 |
| #1504 | Rescue at Rigel | $25.39 |
| #1507 | Star Warrior | $33.89 |
| #1506 | Tues. Morning Quarterback | $25.39 |
| #1515 | Upper Reaches of Apshai | $16.89 |

### ON-LINE

| | | |
|---|---|---|
| #1120 | Cranston Manor | $39.69 |
| #1104 | Crossfire | $26.39 |
| #1126 | The Dictionary | $87.89 |
| #1119 | Expediter II Compiler | $84.89 |

**Outside Calif. 800-344-5106**

We take **MasterCard, American Express or VISA** (Include card # and expiration date). **California residents add 6% tax.** Include $2.00 for postage. Foreign and hardware extra. Foreign (excluding Canada): remit U.S. currency, checks on U.S. banks, use listed charge cards, or make direct wire transfers through Security Pacific Bank, Corcoran, for a $6.00 charge. All overseas orders shipped by air. Send for free catalog. Prices subject to change without notice.

**CIRCLE 170 ON READER SERVICE CARD**

drops to an incredibly low six seconds. Is this the best one can do?

I thought it was until I received a letter from Donald Malm, a professor of Mathematics at Oakland University in Rochester, MI. Unlike the majority of the programs I received, which were slight variations of the program in Listing 1, Dr. Malm's approach was quite different and had the definite stamp of a mathematician. Before commenting on his approach let's take a look at a cleaned up version of his program. See Listing 3.

*Listing 3.*

```
10 REM Sieve of Eratosthenes - Even Faster
20 DIM N$(1000)
30   PRINT 2;
40   FOR P=3 TO 31 STEP 2
50     IF N$(P)="1" THEN NEXT
60     FOR J=P*P TO 31*(P=3) + 997*(P>3) STEP P+P
70       N$(J)="1"
80     NEXT
90     PRINT P;
100  NEXT
110  FOR P=37 TO 997 STEP 6
120    IF N$(P-2)<>"1" THEN PRINT P-2;
130    IF   N$(P)<>"1" THEN PRINT P;
140  NEXT
150 END
```

With the remark statement and all unnecessary spaces taken out, this program takes about 5.3 seconds to run on the Apple. How does it do it? It substitutes cunning for brute force and cheats a little bit in the process. Here is how it works.

This program gains all of its time in lines 110-140 where it steps by 6 instead of 2. Since P starts at 37 (which is equal to 1 MOD 6), P will always be equal to 1 MOD 6 and P-2 will always be equal to 5 MOD 6. As a result, all multiples of 2 and all multiples of 3 are skipped in the sieve. This can be seen in Table 2.

| | | Column | | | |
|---|---|---|---|---|---|
| a | b | c | d | e | f |
| 1 | 2 | 3 | 4 | 5 | 6 |
| 7 | 8 | 9 | 10 | 11 | 12 |
| 13 | 14 | 15 | 16 | 17 | 18 |
| 19 | 20 | 21 | 22 | 23 | 24 |
| 25 | 26 | 27 | 28 | 29 | 30 |
| .. | .. | .. | .. | .. | .. |

*Table 2.*

Notice that columns b, c, d, and f contain all the numbers that are multiples of 2 or 3. If we can skip over these numbers, we can significantly reduce the amount of checking that must be done in the sieve. The remaining rows, a and e, contain the numbers congruent to 1 MOD 6 and 5 MOD 6, respectively.

The trouble with this program is that it gains valuable tenths of a second by knowing ahead of time that 3 is a prime. Under the rules of challenge [2], one could only know ahead of time that 2 is a prime. One has to stop somewhere or else the problem quickly generates into a triviality: compute all the primes ahead of time and print them out in one print statement.

So, where does that leave us? Under the conditions of the problem, The Super Fast program listed above is still the fastest. But the experience from this problem proves, once again, that any program can be improved.

**Know Thy System**

People who know their systems well took one look at the times reported in the December 1981 article and suggested ways to improve them, for their particular system, without changing the algorithm at all. Lane Lester suggested the following: "For the most favorable comparison of the speed of the Radio Shack Color Computer with other machines it is necessary to POKE 65495,0 before running the test. This sets the microprocessor to a higher speed than the one that is initialized when the unit is first turned on." I tried this and it did speed up the time from 10 to 6.3 seconds.

Walter Lee was able to take 3 seconds off the time reported for the Atari by turning off the display processor, Antic: "The display processor steals time from the 6502. By turning it off, we can increase the execution speed. The operating system eats up time during the vertical blank interrupts, so by poking 1 into the CRITIC flag (location = 66 decimal), we can shorten the vertical blank interrupt but still operate the real-time clock (location = 20,19). The CRITIC flag is disabled by POKE 66,0 and the screen immediately reappears with all the prime numbers." (See Listing 4.)

*Listing 4.*

```
0 GRAPHICS 0:POKE 66,1:POKE 19,0:POKE 20,0 : DIM
  N(1000):?2;
1 FOR P=3 TO 997 STEP 2:IF N(P) THEN 4
2 IF P<32 THEN FOR Y=P*P TO 997 STEP 2*P:N(Y)=1:NEXT Y
3 ?P;
4 NEXT P:?:?(PEEK(19)*256 +PEEK(20))/60:POKE 66,0
```

**Primes Larger Than 1000**

Donald Tucker submitted an interesting extension of the sieve program to print out the primes between any two limits no more than 10,000 apart with an upper limit not to exceed 100,000,000. His program was written for the Atari. Listing 5 is an Apple version for primes no more than 8,000 apart.

*Listing 5.*

```
  1 REM LARGE PRIME PROGRAM
 10 REM By Donald Tucker
 20 REM Primes between lower limit F and upper limit L.
 30 DIM A%(8000),G%(8000)
 40 INPUT "ENTER LIMITS F,L ";F,L: T3=SQR(L):T4=SQR(T3)
 50 IF F=2*INT(F/2) THEN F=F+1

 60 REM Begin loop
 70 FOR T=3 TO T3 STEP 2:IF A%(T) THEN NEXT : GOTO 170
 80 IF T>T4 THEN GOTO 100
 90 FOR V=T*T TO T3 STEP T+T: A%(V)=1: NEXT V

100 REM Eliminate the odd multiples of the factor T
110 H=INT(F/T)+1
120 IF H=2*INT(H/2) THEN H=H+1
130 IF H<T THEN H=T
140 IF H*T<=L THEN FOR V=H*T TO L STEP T+T:X=V-F
150 G%(X)=1:NEXT V
160 NEXT T
170 REM Print Results
180 FOR V=F TO L STEP 2: X=V-F: IF G%(X)=0 THEN PRINT V;
190 NEXT V
200 END
```

**Acknowledgements**

I would like to thank the many people who contributed programs and comments. Jim Michalets, a student from Greendale High School in Greendale, WI, was the first to send in a version of the fastest algorithm. Others with interesting versions were: Delmar Hinrichs from Washougal, WA; David Neal of New Castle, CO; Albert Nijenhuis of Philadelphia, PA, who also sent in some very nice programs for generating Lucky Numbers; Harley Dyk of Grand Haven, MI; Bruce Blodgett from East Lansing, MI; and K. Rodenhuis from The Netherlands. □

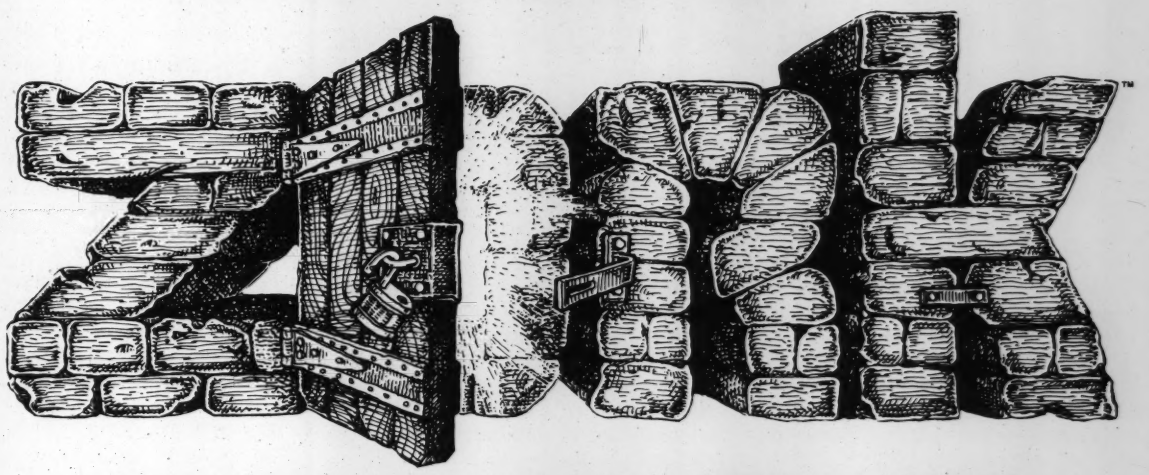
# Many are the doors that lead to the underground.



**The top prose adventure bestsellers, ZORK I and ZORK II.**

# Now available for

Apple® II, ATARI®400/800, IBM Personal Computer, NEC PC-8000, CP/M,® and PDP™-11.

**Few are they who come back alive.**
Your greatest challenges lie ahead—and below. ZORK I: The Great Underground Empire, and ZORK II: The Wizard of Frobozz will transcend any computer age adventure you've ever encountered.

Those who live to tell the tale of ZORK's mysteries speak of becoming immersed in a dimension where the extraordinary is commonplace, and the dangers are as real as any in human experience. It is said that once you have known the forbidden realm, you are changed—and that he who dares ZORK's depths twice will never be the same again.

Now your door to ZORK has opened to beckon you below. The journey begins where Infocom's new worlds of INTERLOGIC™ prose adventure—including the new mystery thriller DEADLINE™—await you, at fine computer stores everywhere.

Apple is a registered trademark of Apple Computer, Inc. ATARI is a registered trademark of Atari, Inc. CP/M is a registered trademark of Digital Research, Inc. PDP is a trademark of Digital Equipment Corporation.

INFOCOM™
55 Wheeler Street, Cambridge, MA 02138

**Open your door to the underground—here's $2 for openers!**

To get your $2 ZORK rebate by mail, just send Infocom this coupon with your completed warranty card and sales slip from ZORK in their original form. No reproductions will be accepted. Limit 1 rebate for household, address or organization. Offer good only in U.S.A. Void where prohibited, taxed or otherwise restricted. Rebate request must be postmarked before midnight 7/31/82. Infocom is not responsible for lost, late or misdirected mail. Allow 4 to 6 weeks for delivery.

**Infocom, 55 Wheeler St., Cambridge, MA 02138**
**OFFER EXPIRES JULY 31, 1982**

# Wherefore the Computer Market?

What does the computer market need to get going?

From a recent trip of several computer specialty shops in a major metropolitan area, we think the market needs someone who knows how to sell merchandise and we think retailers involved in this business need to get a handle on what market segments they are after.

We want to buy a personal computer and we want it for business reasons and personal reasons. We are willing to spend money even to the point of going into hock for a few thousand dollars. But we haven't purchased one yet because no one has sat down with us and explained the benefits and taught us how to get hands-on experience with a unit.

Here's what happened on the mystery shopping trip.

Computer store number one is in a relatively high rent district. There is a good amount of rental space in the store, and it is stocked full of sales people—or should we say people on the payroll.

The store carries a full line of merchandise from the low-end video game type computers to the more sophisticated and more expensive equipment.

We went into the store in the afternoon, after lunch, when only a few customers were present. We walked around the shop once just looking. No one approached us. We stood around maybe 10 minutes. No one approached us. Finally we asked someone if he worked there.

"Yea I work here," he replied, not looking up from his reading.

"I'd like to look at one of your computers," we said.

"Which one," he asked, finally looking up.

"I don't know," we confessed. "I'd like a unit I can use in my business and one from which I can derive some personal enjoyment."

The employee said to wait a minute. He walked over to another employee who was busily playing with a computer. The person working the computer was visibly annoyed to be bothered. Our man returned and said that he would help us. What did we want?

We explained we were in the writing business and wondered whether or not it was possible to have a computer from his vast selection which would have some word processing capabilities, some accounting capabilities, and which, during off hours, could play blackjack or chess.

***Maybe we'll wait to buy a personal computer. Maybe we'll wait until some of the big audio or video specialists get into the business who know what a customer looks like and how to treat him.***

Our man disappeared for about five minutes and returned with a floppy disc.

"This enables you to have word processing capabilities," he said, and placed it in a drive mechanism.

He typed a few words, but his full attention wasn't on the demonstration.

"How do you correct misspellings," we asked. He showed us.

"Can you insert or delete full paragraphs," we asked. He said to wait a minute and he disappeared into the back. We played with the computer for a while. The screen filled up with words. We began pushing keys to try and erase what we had typed. We couldn't. We looked around for our man. We couldn't find him. We waited 15 minutes for him to return. He did not come back. We left. We won't return there ever.

A second computer shop was smaller. Here we were more specific what we wanted. We'd like a several thousand dollar computer but we need a really good printer, we told the man. We discovered it would cost about $3,000 for such a printer. That is kind of expensive, we said, but maybe we could swing it. Could we have a demonstration?

"No," replied the employee, "the machine is on the road."

"When will it be back in the store?"

"Can't say," he replied. "Why don't you give us a call in a week or so."

"Sure buddy," we thought to ourselves. "But don't hold your breath."

Then there was the third computer store. We'd seen this one written up in trade journals. It must be good . . . We again entered the store in the afternoon when it was not busy.

There was a youngish looking man sitting in front of a computer with another man. They pushed keys, things came on the screen which they cursed. They pushed more keys, more things came on the screen, more curses.

We walked around and looked at some of the computers which were featured. One was on special. We turned it on but there was no power. We looked at another which also was not plugged in. We waited. This time 20 minutes passed.

Finally a second man came into the store and one of the employees on the computer finally took notice. He got up and walked over to the latest arrival. This man was obviously a salesman and nervously said to the employee that we were there ahead of him. The employee finally took notice of us and came over to see what we wanted. We explained. He handed us some literature, and walked back to the newly arrived salesman.

We stood around and waited until they were finished talking. As the employee was walking back to his computer, we blocked his way and told him we'd like a demonstration.

"Can't do it now," he said, "I'm too busy. Why don't you drop in between 10 a.m. and 12 noon sometime. That's the slow time and I'll give you a demonstration."

Maybe we'll wait to buy a personal computer. Maybe we'll wait until some of the big audio and video specialists get into the business who know what a customer looks like and how to treat him.□

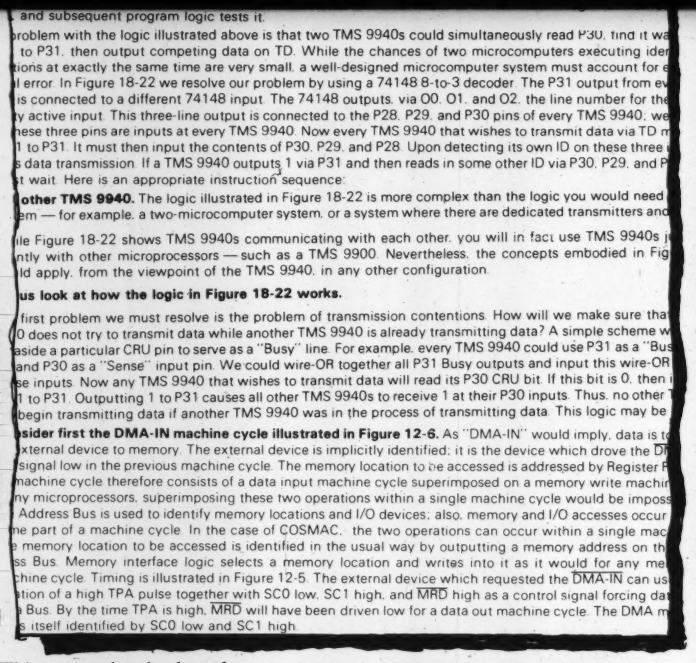
# I Don't Understand a Word of It.



and subsequent program logic tests it.

roblem with the logic illustrated above is that two TMS 9940s could simultaneously read P30, find it wa
to P31, then output competing data on TD. While the chances of two microcomputers executing ider
tions at exactly the same time are very small, a well-designed microcomputer system must account for e
l error. In Figure 18-22 we resolve our problem by using a 74148 8-to-3 decoder. The P31 output from ev
is connected to a different 74148 input. The 74148 outputs, via O0, O1, and O2, the line number for the
y active input. This three-line output is connected to the P28, P29, and P30 pins of every TMS 9940; we
hese three pins are inputs at every TMS 9940. Now every TMS 9940 that wishes to transmit data via TD m
1 to P31. It must then input the contents of P30, P29, and P28. Upon detecting its own ID on these three
s data transmission. If a TMS 9940 outputs 1 via P31 and then reads in some other ID via P30, P29, and P
t wait. Here is an appropriate instruction sequence:

**other TMS 9940.** The logic illustrated in Figure 18-22 is more complex than the logic you would need
em — for example, a two-microcomputer system, or a system where there are dedicated transmitters and

ile Figure 18-22 shows TMS 9940s communicating with each other, you will in fact use TMS 9940s j
ntly with other microprocessors — such as a TMS 9900. Nevertheless, the concepts embodied in Fig
ld apply, from the viewpoint of the TMS 9940, in any other configuration.

**us look at how the logic in Figure 18-22 works.**

first problem we must resolve is the problem of transmission contentions. How will we make sure tha
0 does not try to transmit data while another TMS 9940 is already transmitting data? A simple scheme w
aside a particular CRU pin to serve as a "Busy" line. For example, every TMS 9940 could use P31 as a "Bus
and P30 as a "Sense" input pin. We could wire-OR together all P31 Busy outputs and input this wire-OR
se inputs. Now any TMS 9940 that wishes to transmit data will read its P30 CRU bit. If this bit is 0, then
1 to P31. Outputting 1 to P31 causes all other TMS 9940s to receive 1 at their P30 inputs. Thus, no other
begin transmitting data if another TMS 9940 was in the process of transmitting data. This logic may be

**sider first the DMA-IN machine cycle illustrated in Figure 12-6.** As "DMA-IN" would imply, data is t
xternal device to memory. The external device is implicitly identified; it is the device which drove the DM
signal low in the previous machine cycle. The memory location to be accessed is addressed by Register P
machine cycle therefore consists of a data input machine cycle superimposed on a memory write machi
ny microprocessors, superimposing these two operations within a single machine cycle would be impos
Address Bus is used to identify memory locations and I/O devices; also, memory and I/O accesses occur
ne part of a machine cycle. In the case of COSMAC, the two operations can occur within a single mac
e memory location to be accessed is identified in the usual way by outputting a memory address on th
ss Bus. Memory interface logic selects a memory location and writes into it as it would for any me
chine cycle. Timing is illustrated in Figure 12-5. The external device which requested the DMA-IN can us
tion of a high TPA pulse together with SC0 low, SC1 high, and MRD high as a control signal forcing da
Bus. By the time TPA is high, MRD will have been driven low for a data out machine cycle. The DMA m
s itself identified by SC0 low and SC1 high.

Have you ever had trouble understanding a microcomputer sales brochure, instruction manual, and other documentation? Join the club; I have had a lot of trouble.

For example, I needed more memory. So I ordered Bitbyte X16KR memory board. The price seemed fair and somebody recommended it for my S-100 system.

After a long wait the package finally arrived. I inspected the board and everything seemed to be in order. So I went to the manual to find out about addressing. I didn't understand a word. It looked like this: "The MSB's of the data sent out to the addressed port control the selection of the banks to receive the command. A logic zero in bit position 7 will direct the command to bank X, and a logic 0 in bit position 6 will direct the command to bank Y."

I did not have the slightest idea what or who the MSBs were, where banks X or Y were supposed to be (I use Bank Z) not to mention their addressed ports. I guess it helps to have an address on the port, though.

## Bad Documentation

With some expert help I finally managed to get the DIP switches set correctly. The fact that I was never able to get the board to work properly is another story. This story is about the lack of communication between the hardware and software producers and their novice customers.

The producers still seem to be speaking to computer engineers when, perhaps, the majority of personal computer users today are nontechnical enthusiasts: computer amateurs like me.

I assume that I am not the first to complain about this. Certainly I will not be the last. This matter has bothered me in several ways. First, as a buyer and user of computer equipment. Then as a "professional in comprehension." I am a university professor of communication (behavior) and I did my doctoral work on readability.

And to me, most of the documentation in the field of personal computing is poor. There are a few exceptions, but very few. Documentation is, however, an integral part of a computer system. And documentation must be designed for the intended user, not for the producers themselves.

***Most of the documentation in the field of personal computing is poor.***

## Elements of Comprehension

Readability studies and research into the human information process have shown that there are at least the following main factors of linguistic comprehension: language, level of abstraction, identification, and interest.

The first point deals with the *form* of the message and the others with the *content*. All the elements interact. It is seldom possible to blame only one of them or to improve difficult text by changing only the language form.

The message may reach the receiver in a communication situation. It may even be accepted by the receiver. However, it may not be understood or it may be understood in a different way from that intended by the sender.

Comprehension is a process in the receiver. However, the message and the communication situation also influence the information process of the receiver. Thus, the total understanding of the message is influenced by the communication situation, the message, and the receiver.

## Human Information Processing

Detailed articles about human information processing have appeared in microcomputer magazines in the past. I must return to the subject, however, to make it easier to understand why we do or do not understand.

In a human, the brain, the nervous system, and the senses constitute the *control system*. This system controls our actions in a rather complex way. Energy changes from the environment activate the sensory system which transfers the input impulses in an electrochemical process into the *short term memory*, which, perhaps, is also our "consciousness."

The short term memory (STM) is a temporary working memory with a limited information handling capacity. According to psycholinguist George A. Miller it can process "seven plus and minus two words" simultaneously. A word here is to a human approximately the same as it is to a computer.

If the incoming signals are accepted, they can cause action in the body functions and/or be transferred to the *long term memory* (LTM). Electronic pulses induce permanent chemical changes in neural systems, and permanent (we hope) memory images are formed.

# OKIDATA

Making small printers for people who think big.

## OKIGRAPH™
## Dot Addressable Graphics Prints Circles Around The Competition

Or squares. Or charts. Or graphs. Or illustrations. Or any graphic data your computer tells it to print. All with superb clarity and resolution.

OKIGRAPH™ is standard equipment on the Microline 84 and the Model 2350. It's an easily added option to the Microline 82A and 83A. So don't settle for the plain old text you get with other printers. Be creative. With Okigraph.

Interested? Contact us at 111 Gaither Drive, Mount Laurel, N.J. 08054, or call (800) 257-7768 for the name of your local authorized Okidata distributor.

Okidata is a subsidiary of
Oki Electric Industry Company Ltd.

- OKIGRAPH™ I includes two plug-in PROMs and an instruction manual on Assembly language programming.
- OKIGRAPH™ II includes a floppy disk for additional graphics printing features and an instruction manual.

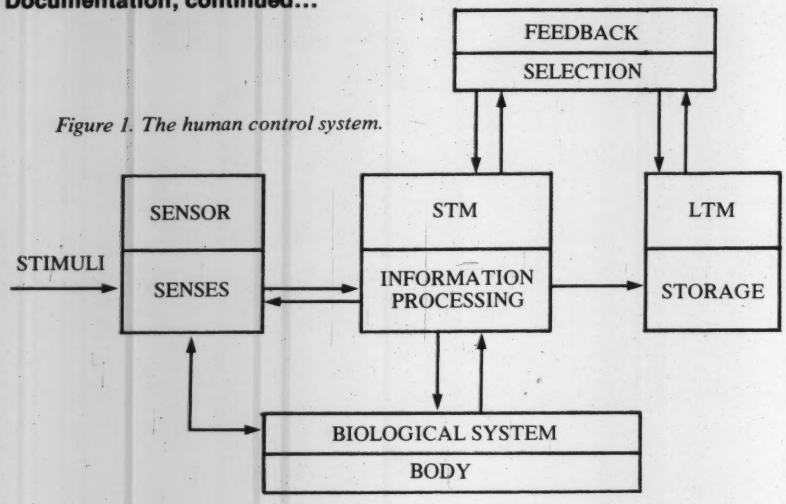

*Figure 1. The human control system.*

**Memories in Brain and Computer**

We might say that the STM is a very small and short term RAM while LTM is our main memory system: ROM, RAM and floppies. The functions of the STM can be compared with the CPU registers.

STM is very much like a small dynamic computer memory. It has to be constantly refreshed for the images to stay there and even then it cannot hold memories for more than a few seconds. Our long term memory is more like a static computer memory.

**Understanding and Information Processing**

The function of STM and LTM are essential for understanding language. Let us see how you would probably process the following sentence: Here we have a boy with a large, red ball.

There are ten words in the sentence. It seems likely that your STM divides the sentence in two parts. You read first: Here we have a boy. Then your short term memory stops to process that piece of information. STM seems to take in as many words as conveniently fit into this small storage—usually between five and ten words.

Now follows a discussion between your STM and LTM. Your "monitor system" (in ROM) seeks structure (syntax) in the message and also searches for meaning in the words (semantics).

The result of the discussion is an image of a boy: you understood the message, you gave meaning to the signals received by your control system.

After being understood the first part of the sentence starts to fade into LTM and your STM is ready to take in the second part of the sentence: with a large, red ball.

You have no difficulty understanding this, and the image of a large and red ball is transferred to LTM.

Now suppose the sentence had been: Here we have a cluster with the relevant factory redundancy.

Your STM takes in "here we have a cluster" and tries to process that, then it tries to understand the meaning of this piece of information. Let us assume that you don't know what "cluster" means.

***The more familiar the message, the better the understanding.***

You are not able to form a meaningful thought of words. You just have an image: Here we have ?. Then you continue the rest of the sentence: with the relevant factor redundancy.

You may not know the word "redundancy" or "relevant" or what the combination of these words means. You are not able to construct a meaningful thought unit of the words. So the electric pulses circulating in your STM disappear without leaving any image in your LTM.

**We Store Meanings, Not Words**

It seems that we do not transfer the individual words of a sentence but the *meaning* of the sentence. STM has to construct a meaningful whole from the separate words. If this process is successful, then the meaningful whole (the meaning of the sentence) is transferred to LTM. Mind you, we don't transfer individual words but "meaningful chunks" to quote Miller.

Thus, it seems that when we process linguistic information (in our left brain half), we chop the strings of words into chunks of five to ten words. These chunks are processed and their *meanings* stored—not necessarily their words.

And if we misunderstand the meanings, then wrong meanings are stored. Spoken or written language has to be actively processed—understood.

Difficult, unfamiliar words contaminate the whole text. They make it impossible or very difficult for the STM to form the meaningful thought units (chunks) which are necessary for understanding.

Readability studies in different languages have shown that the *word factor*, selection of words, is the most important linguistic element of comprehension. The more unfamiliar and difficult words the text contains, the more difficult it is perceived to be.

Again we can compare the process with a computer. If you give a wrong command to the computer you get an error message or wrong performance. The wrong command is not understood or it is misunderstood. In your control system unfamiliar and difficult words are "wrong commands."

Difficult words are like wrong pieces in a puzzle: they make it impossible to assemble a meaningful whole.

**Complexity and Understanding**

We all know from experience that it can be difficult to understand long, complex sentences. Legal text is a very good example.

Complexity overloads the short term memory. If sentences are long and complex, the chopping action of the information process divides the sentence into too many chunks. The *information span* of the STM is too short to enable it to handle complex linguistic structures.

It seems that we can, somehow, manage two thought chunks simultaneously. One is processed in the STM while one is fading into the LTM. Thus, sentences up to about 18-20 words can be processed.

Comprehension decreases rapidly when the length of the sentence exceeds these 18-20 words. Also, the more complex the grammatical structure of the sentence, the more difficult it is for the limited capacity of the STM to process the structure.

Readability studies have shown that messages are perceived as difficult if they contain a large proportion of long, difficult and unfamiliar words and/or the sentences are long and complex.

**Level of Abstraction and Identification**

Language structure is not the only element of comprehension. The *content* of the message is also important.

If you try to explain nuclear physics to a small child, he or she may not understand even if you use very easy language. The subject of the message is too difficult.

It is often said that it is easier for a rich person to become richer than for a poor person to become rich. If you already have money, it is relatively easy to generate more money. If you have very little money, it is difficult to start any activity which might generate new money.

It is the same with knowledge. The more you already know, the easier it is to learn more. I speak five languages and understand some five or six more. To me this is nothing extraordinary, because languages come in groups. If you know one foreign language the next comes much more easily.

The same principle applies to any information processing. The more you already know about a specific subject, the easier it is to understand new information about it.

The level of abstraction refers to the relationship between the message content and reality. Abstraction is measured in the *concrete-abstract* dimension. Concrete things you can see, touch, hear and smell: a dog, a house, a girl, money, etc. Abstract things are conceptual, such as freedom, religion, democracy, beauty, etc. Usually the more concrete the message, the easier it is to understand.

A frequent finding in communications research is that the more education a person has, the easier it is for him to understand abstract language.

This is not necessarily related to intelligence: apparently formal education trains us to process conceptual (abstract) information. This is a very important factor to consider in mass communication because there are usually many levels of education in the audience of the media.

***The most famous of these formulas for English, the Reading Ease Formula, was developed by Rudolf Flesch during the 1940's and 1950's.***

Identification, which is the ability to relate oneself to the subject matter is closely related to the level of abstraction: the more familiar the message, the better the understanding.

Thus, if you have to explain difficult technical material to non-experts, you should start with familiar, concrete things. Use them to introduce new things, and new concepts.

**Interest**

Strangely enough, interest in the message is a comprehension factor. The more interested you are in the subject matter, the more mental work you are willing to do to understand the message.

In mass communication, interest, however, has another crucial function. It determines whether the receiver is willing to receive the message at all. I am sure that the editor of this magazine thinks about this all the time: do we reach the readers?

**How To Measure Readability**

How do you know whether a particular text is easy or difficult to comprehend?

Professionals in the media develop a "feel" for it. They can "smell" difficult language. If you don't have that sense, you can use something called a "readability formula." These are mathematical models based on statistical analyses of written material ranked for difficulty in experiments.

The most famous of these formulas for English, the Reading Ease Formula, was developed by Rudolf Flesch during the 1940's and 1950's.

There already exist several programs available to compute readability using microcomputers. (Programs to determine readability may be found in the following issues of *Creative Computing*: April 1980, March 1981 and April 1981.) The next step is to combine this computation with word processing programs. When you have written a document, you immediately obtain a readability quotient for your text.

**What Makes Writing Difficult to Understand?**

If we apply the principles we discussed here, we can make the following generalizations:

Difficult writing has the following characteristics:

- Many words which are longer than average, unfamiliar and specialized, often of Latin or Greek origin.
- Long, complex sentences—the average sentence length exceeds 18-20 words.
- Presentation based on abstract concepts with very little relation to "perceived reality."
- Subject matter strange and distant for the receiver.
- Subject matter not interesting to the receiver.

**What Makes Writing Easy to Understand?**

Avoiding the points listed above is likely to produce writing that is easy to understand. It will have the following characteristics:

- Many words which are short and familiar, mostly of Anglo-Saxon origin.
- Simply structured and relatively short sentences—the average sentence length is 10-20 words.
- Presentation based on concrete ideas which can be perceived by the receiver.
- Subject matter familiar—or approached through familiar concepts.
- Subject matter of interest to the receiver.

### Don't Understand, continued...

Almost all subject matters can be made easy to understand (just read a writer like Isaac Asimov). It also very seldom happens that clear writing turns away readers. The opposite is almost always true.

**Examples**

To illustrate my point I shall name a few concrete examples of difficult and easy to understand writing (as I perceive them) in the field of personal computing.

To start with the bad news, I found the Processor Technology (SOL) hardware documentation just about impossible to understand. It was written by engineers for other engineers.

If you are not a software expert you get very little out of the CP/M manuals. I have learned most of my CP/M from more knowledgeable friends and magazine articles. Even so I don't think I am able to use more than a fraction of its potential.

I think CP/M is a very good example of a first class product which is too specialized.

***I don't think manufacturers realize how many personal computers have reached novice users.***

Another example is Thinker Toys. I have several of their fine boards, but I always have trouble with their documentation. And the fault may not be completely mine.

I don't think manufacturers realize how many personal computers have reached novice users. They still write their specs for fellow engineers.

Now the good news. I have found some excellent documentation in which most of the principles of "popularization" have been observed. It may not come as a great surprise that one of these is Heathkit. They have a long tradition of making difficult technical material easy to understand. Their courses "Basic Programming" and "Assembly Language Programming" should be used as models by writers of documentation.

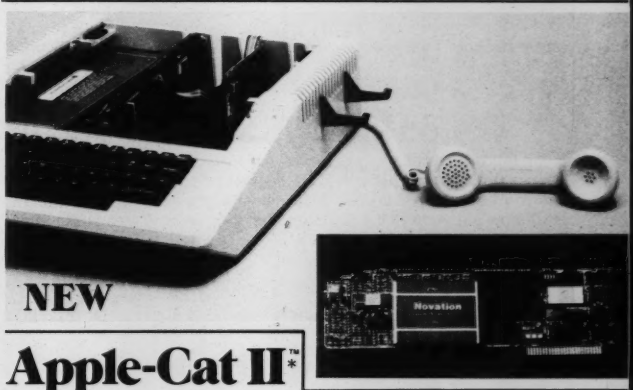
I may not be the only one who thinks that a large part of the success of the TRS-80 systems is due to the fine documentation produced by Radio Shack.

Let me conclude by saying that I don't have anything against experts using expert language when they speak to each other. But when experts speak to non-experts using expert language, the communication process is abused. □

# Take your pick of the litter.

When you're ready to let your computer out and introduce it to the rest of the world, one of the Cat family of Modems is the way to do it.

Take your pick. You can't go wrong. They're all purebreds—from Novation, the recognized world leader in personal communications.

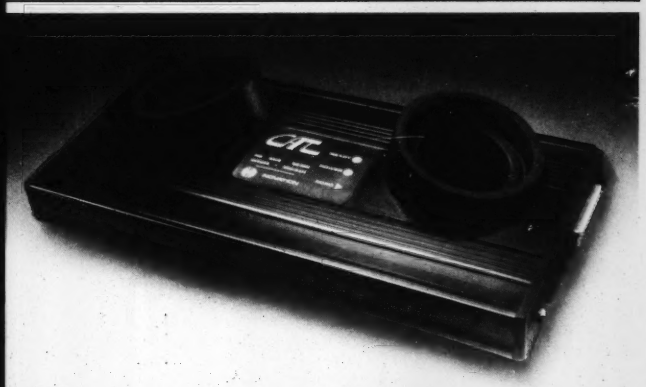


NEW

## Apple-Cat II*

Major breakthrough—the intelligent modem. Slips into your Apple. All auto functions, selectable baud rates, Serial RS-232 port, BSR X-10 controller*** easy-to-use self-prompting format. Other options available.

From $389** including software



## Cat Acoustic Modem

Fast, accurate, reliable originate/answer modem—with built-in diagnostics. Just add your computer and phone. Then dial up the world. $189**

## Super Mike

Replace your phone's carbon mike with Super Mike. No more carbon granule problems. Making things perfectly clear has never been so easy.

$14.95**

## D-Cat

Get the performance and reliability of a direct connect modem (up to 20dB improvement) with the portability and price of an acoustic. Use it at home. Use it at work. Truly unique. So's the price. $199**

## Auto-Cat

Answers automatically and stores data in your computer until you're ready. The world's first LSI 103 modem. State-of-the-art, all digital, crystal controlled direct connect.

You're off the hook for under $250**

# Machine Intelligence: A Function of Human Ingenuity

**Christos J. Georgiou**

*In the late 50's, linear programming was very much in vogue. Linear programming does not mean programming in a straight line, but rather is an exhaustive approach to solving large sets of simultaneous equations ultimately to reach a perfect solution to a problem. Unfortunately the method took vast amounts of computer time. For example, to schedule a railroad train of mixed loads for the most efficient route took upwards of 100 hours of computer time—not very practical considering that scores of trains leave hundreds of yards every day.*

*"But wait," said the computer scientists. When the computers get bigger and faster, they'll be able to solve these problems.*

*Lost amid the legions of linear programming advocates was a small group of people at Carnegie-Mellon University led by Drs. Alfred Kuehn and Tim McGuire. These people, and others, pursued the notion of a heuristic approach. In other words, start with some rule of thumb and then try shifting things around to approach a better solution. This doesn't necessarily reach the best or perfect solution, but rather an acceptable one from the standpoint of solving the problem in a reasonable amount of time.*

*Now, some 20 years later, people are "discovering" that these principles apply to small computers too. Surprise! That, in no way, is meant as a put-down of this article. Quite the contrary. The lessons one can learn from this article demonstrate in the author's words, "that the ultimate solution to a problem is more likely to be found in a combination of machine power and programmer resourcefulness than in machine 'brute force' alone." Bravo.*

*Not only that, but the Knight's Tour program will allow anyone with a Basic speaking computer to experiment with some facets of artificial intelligence.*

*— DHA*

Programming computers to play board games such as chess or checkers, or to solve various puzzles can be an enjoyable but frustrating experience. The fun part comes when the computer, whether it is an IBM 370 located at some multi-million dollar data processing center or a personal computer on your desk at home, comes to life and starts to think.

Frustration can quickly dampen the initial excitement, though, when some time later the machine fails to see the correct move—a move that should have been obvious to even the average human player. Attempts to increase program intelligence by implementing deeper next move look-ahead or more sophisticated position evaluation routines, usually result in endless waiting for the machine to make its next move—again taking all the fun away. In intelligent computer games, therefore, the problem of machine intelligence vs. speed is the single most important consideration that must be dealt with.

In the first part of this article, the question of how to improve the intelligence of computers without paying a high price in program execution time is addressed. Then, an example is shown which attests to the fact that the ultimate solution to this problem is more likely to be found in a combination of machine power and programmer resourcefulness than in machine "brute force" alone.

### Game Complexity and Machine Limitations

Game playing and puzzle solving by computers fall under the broader heading of artificial intelligence. The performance of artificial intelligence programs and algorithms is critical not only in terms of producing meaningful results but also in producing them quickly enough to satisfy time requirements imposed by humans. Programs that fail to do so are, for all practical purposes, useless. Unfortunately it turns out that, in most cases, the time of program execution increases proportionally to any increase in intelligence. Furthermore, this relationship is not linear but exponential.

Christos J. Georgiou, P.O. Box 388, Goleta, CA 93116.

# COLLEGE BOARD SAT* PREP SERIES

TRS-80, APPLE, PET, OSI, ATARI, CP/M, PDP-11

Each program confronts the user with a virtually limitless series of questions and answers. Each is based on past exams and presents material on the same level of difficulty and in the same form used in the S.A.T. Scoring is provided in accordance with the formula used by College Boards.

**S.A.T., P.S.A.T., N.M.S.Q.T.** — Educator Edition set includes 25 programs covering Vocabulary, Word Relationships, Reading Comprehension, Sentence Completion, and Mathematics. **Independent tests of S.A.T. series performance show a mean total increase of 70 points in students' scores.**

Price **$229.95**

**GRADUATE RECORD EXAM Series** - Educator Edition includes 29 programs covering Vocabulary, Word Relationships, Reading Comprehension, Sentence Completion, Mathematics, Analytical Reasoning and Logical Diagrams.

Price **$289.95**

# COMPETENCY PROFICIENCY EXAM PREP SERIES

This comprehensive set of programs consists of simulated exam modules, a thorough diagnostic package, and a complete set of instructional programs. It is designed to teach concepts and operations, provide drill and practice and assess achievement levels through pre and post testing. The Competency Exam Preparation Series provides a structured, sequential, curriculum encompassing mathematical, reading and writing instruction.

This program is designed for individual student use or use in a classroom setting. Programs provide optional printer capability covering worksheet generation and performance monitoring. C.E.P.S. are available in three software formats.

*Special editions available for California Proficiency Assesment Test and New York Regents Competency Tests. Call for Prices.*

# Krell's M.I.T. Logo for Apple* $179.95

Complete 4 disk set includes Library Disk, 20 program Tutorial Disk, **Alice In Logoland** and **2 COPIES OF M.I.T. LOGO FOR APPLE***

## Odyssey In Time

This spectacular adventure game adds a new dimension of excitement and complexity to **Time Traveler.**

**Odyssey In Time** includes all the challenges of **Time Traveler** plus 10 additional eras. Each game is different and may be interrupted and saved at any point for later play. **$39.95**

## Time Traveler

The best of the adventure games. Confronts the player with complex decision situations and the demand for real time action. Using the Time Machine, players face a challenging series of historical environments. To succeed you must build alliances and struggle with the ruling power. Each game is unique. **$24.95**

## Isaac Newton +

Perhaps the most fascinating and valuable educational game ever devised - **ISAAC NEWTON** challenges the players (1-4) to assemble evidence and discern the underlying "Laws of Nature" that have produced this evidence. **ISAAC NEWTON** is an inductive game that allows players to intervene actively by proposing experiments to determine if new data conform to the "Laws of Nature" in question. Players may set the level of difficulty from simple to fiendishly complex.

## F.G. Newton

Full Graphics Newton. This version of Isaac Newton presents all data in graphic form. Because data is graphic rather than symbolic, this game is suitable for very young children. Players may select difficulty levels challenging to the most skilled adults.

**$49.95**

## ☆ NEW ☆ ☆MICRO-DEUTSCH☆

***Micro-Deutsch*** set includes 24 grammar lessons, covering all material of an introductory German course. Four test units also included. Grammar lessons use substitution transformation drills, item ordering, translations and verb drills. Drill vocabulary based on frequency lists. Suitable for use with any high school or college textbook. Extensively field tested at SUNY Stony Brook. Available for Apple II and PET/CBM. (PET version includes a special foreign language character chip.) Also available soon: MICRO-FRANCAIS, MICRO-ESPANOL, MICRO-IVRIT, MICRO-YIDDISH, MICRO-CHINESE, MICRO-JAPANESE. **$179.95**

## ☆ NEW ☆ ☆Pythagoras and The Dragon☆

Mathematics in a fantasy game context. Based on **The Sword of Zedek**, **Pythagoras and The Dragon** introduces Pythagoras as a mentor to the player. When called on for aid, Pythagoras poses math questions, and depending on the speed and accuracy of the player response, confers secret information. With Pythagoras as an ally, the quest to overthrow Ra, The Master of Evil, assumes a new dimension of complexity. Depending on the level chosen, problems range from arithmetic through plane geometry.

32K **$39.95**

***Free Bonus with purchase of $300.00 or more: Applesoft Tutor Series***

*Krell Software Corp. has no official ties with the College Entrance Examination Board or the Educational Testing Service. Krell is, however, a supplier of products to the E.T.S.*

PROGRAMS AVAILABLE FOR TRS-80, APPLE II, PET & ATARI

N.Y.S. residents add sales tax.

*All programs require 16K ● TRS-80 programs require LEVEL II BASIC ● APPLE programs require Applesoft BASIC*

## Here's a CHEAP CURE!

The prescription for the **Model I and III:**
**CLOAD** Magazine!

A CASSETTE TAPE with 6 to 8 programs **a month!**

Some past sensational medications:

Game — Caterpillar, Suns, CIA Adventure, Reversi.
Practical — Securities, Energy, Tape Directory, Checkbook.
Utility — Variable Dump, Display, Edit, Code It.
Tutorial — Planets, Spell Egg, Atomic Table, Geometry.

At about **75 cents** a program, a subscription to **CLOAD Magazine** is just what the doctor ordered.

**The Bottom Line:**

| | |
|---|---|
| 1 year (12 issues) | $42.00 |
| 6 months (6 issues) | $23.00 |
| Single copies | |
| Back issues | $ 4.50 |
| Good Games #1 | $12.00 |
| Adventures #1 | $13.00 |

***Temperature and prices rising July 1, 1982**

California residents add 6% to single copies
North America — First Class Postage Included
Overseas — add $10 to subscriptions, and $1 to single copies. Sent AO rate

**The Fine Print**
All issues from Oct '78 on available — ask for list (24 Level I issues also). Programs are for 16K Level II, 16K Model III, and occasionally for disks.

### Intelligence, continued...

This is due to the fact that artificial intelligence problems almost always involve tree-searches.

To demonstrate the dramatic increase in computational power required to obtain a relatively small increase in intelligence, let's look at an example: In the middle of a chess game it is estimated that a player can make an average of 50 legal moves from a given board position. If the chess program has only one level of next move look-ahead, then only 50 positions need be evaluated. As expected, the result of such shallow board examination will be very poor.

To make the program smarter, let's assume that two levels of look-ahead are implemented. This means that for each one of the 50 positions possible on the first move, another 50 positions must be evaluated. This amounts to 50*50=2500 positions. A third level of look-ahead will require 2,500*50=125,000 position evaluations, while a fourth will require 6,250,000. And, of course, if all the possible opponent responses from each position are examined,

***The basic processor speed ratio between a personal computer and a multi-million dollar supercomputer is only about 1:100!***

the number of evaluations becomes astronomical.

It has been shown in practice that the best chess programs are those with the most levels of next move look-ahead. It has also been shown that chess programs running in the world's fastest computer can afford only five or six levels of look-ahead for a real time 2 1/2 hour chess game. As a result, no chess program has yet achieved the distinction of being "unbeaten by humans." The question that may arise, then, is whether it may ever be possible to create the perfect machine that will beat any human challenger, and what specifications such a machine should have.

The first idea that comes to mind to improve computer performance is, of course, to increase speed. How fast, then, can computers run, and what is their absolute limit, if any?

Computer speed depends on both the basic processor speed (the time it takes to execute a simple instruction, such as transferring data from one register to another) and on its internal architectural

# THE CONSOLIDATOR™ FOR VISICALC FILES T.M.

## NOW YOU CAN USE ALL THE POWER OF YOUR APPLE AND ALL THE POWER OF YOUR VISICALC.

If you use VisiCalc, you must have The Consolidator. It's that simple. The Consolidator will save you hours of Keyboard time — adding any number of VisiCalc files together, virtually automatically.

For example, say you need to add the results of four weekly reports to get the monthly total — or add three months for the quarter, twelve for the year, etc. Until now, you had to key-in all the individual sub-totals and recalculate. Now, The Consolidator will do it for you.

The Consolidator will also print out VisiCalc commands, formulas, and the locations to which they apply. In the past, programs that did ONLY that have sold for as much as The Consolidator alone.

The Consolidator is easy to use, with prompts, options and formats all carefully spelled out. If you can use VisiCalc, you can use The Consolidator. It will handle all the column widths, rows and columns accommodated by VisiCalc. It will handle any matrix size which you are able to save with VisiCalc. And it will give you back hours of manual calculation and keying time.

You need The Consolidator to use ALL the power you've got with VisiCalc. It's a bargain at the introductory price of just $49.95, at your local dealer or direct. Visa and Mastercard holders order toll-free, 1-800-835-2246.

CIRCLE 208 ON READER SERVICE CARD

features. To break it down even further, basic processor speed is a function of the technology used to make the processor components such as registers, ALU (Arithmetic Logic Unit), gates, memories, etc. Personal computers using n-MOS microprocessors (such as Z-80, 6502, etc.) can execute a register transfer in one or two microseconds. Large machines of the IBM 370, CDC 7600 or CRAY-1 type use faster basic components (bipolar TTL or ECL-Emitter Coupled Logic) and have speeds ranging from 10 to 100 nsecs for executing similar instructions. So the basic processor speed ratio between a personal computer and a multi-million dollar supercomputer is only about 1:100!

Computers that will operate in the subnanosecond region (using Josephson junction technology) are currently under development. In any case, even though the processor speed frontiers are being pushed back, there are physical limitations on the ultimate speed of a processor. The limiting factor is the speed of light (1 foot per nanosecond).

**Hardware Improvements**

If there are physical bounds to the basic processor speed, what else could be done to make programs run faster? To answer this question, let's think of the following: "Is a CRAY-1 just 100 times more powerful than a Z-80 based personal computer, and if so, why does it cost millions of dollars instead of just, say, $100,000?"

The answer is that the architectural features of the "large" machines, such as bigger and more powerful instruction sets, longer words, special hardware floating point units and other hardware features (such as "pipelines," cache memories, dual CPUs, etc.) that make the flow of instructions easier and faster through the machine, can significantly enhance their computational power.

Even with all this architectural innovation, however, chess programs have achieved only an "expert" rating. Have we reached the end of the computational capabilities of computers until solid-state researchers come up with the next generation of superfast components? Well, not yet.

The advances in microelectronics have resulted in more and more powerful computers being put on silicon chips every day (Intel's 8086, Zilog's Z-8000, Motorola's MC68000). Since microcomputers have started approaching the capabilities of large computers, the potential exists to interconnect a large number of those (in the hundreds or even in the thousands) to form a multi-computer or multi-processor system. Then a program could be partitioned in smaller sub-programs (or processes) which would be distributed throughout this system, each one assigned to a single processor and each one running concurrently with every other one.

The introduction of parallelism in the execution of the program could produce additional savings in the overall program run-time and allow greater depth of position evaluation. The problems of efficiently interconnecting all these processors, the partitioning of the program in concurrently running processes and the synchronization of all these processors and processes is the subject of on-going research.

Finally, the game board itself could be represented by special hardware, instead of the more traditional representation by a data structure stored in the computer memory. That way, certain evaluations which would have been performed by the program could be carried out at the speed levels of the hardware gate, producing further time savings. The hardware board, for example, could automatically eliminate all illegal moves and moves that are obviously bad (allowing the king to be captured, etc.) significantly reducing the options that must be examined by the program, and, thus, playing the role of a hardware tree-pruner! (In fact, BELLE (designed at Bell Labs) the computer chess world champion which won the tournament at Linz, Austria in September 1980, uses such hardware. Even though the program runs on an inexpensive minicomputer, it was able to beat other programs running on more powerful computers.)

***There is a class of problems for which no efficient algorithms may exist.***

So, we have seen several ways of speeding up the game by improving the computer hardware. Is this approach going to accomplish the ultimate result, though? Again, we must consider the astronomical number of computations needed as we introduce more steps of next move look-ahead. (All permutations of a chess game from start to end can be as many as $10^{120}$, a number that exceeds the number of atoms found in the universe.) It seems, therefore, that making the program run faster by using the "brute force" approach alone is not going to bring the desired results, even though speed improvements of many orders of magnitude could be achieved.

**Software Improvements**

A way of helping things out is to make the programs smarter and the algorithms more efficient, so that their computation time is reduced. First of all, the program must be written in a language that executes quickly in the machine. Interpreted languages such as Basic are very slow, since they usually require several milliseconds for the execution of a single statement. The best choice of language in terms of speed of execution is, without doubt, machine language that is executed directly by the hardware and can be tailored to the requirements of the problem. Machine language poses an additional problem in that it requires more time for program development and debugging than higher level languages. In spite of this drawback, however, almost all championship caliber chess programs have been written in machine language for the sake of speed.

Second, all searches for the best move must be carefully evaluated before being carried too deeply. Tree-pruning techniques (alpha-beta searching, etc.), if applied properly, can improve program run-time by many orders of magnitude. The basic idea behind tree-pruning is that, if you know a certain path will lead to a dead-end, there is no point in following it. A problem that may arise in its application, however, is the choice of criteria upon which the decision "to take or not to take" a path will be based. It is quite possible that a truly innovative move, such as sacrificing a queen and a rook to checkmate five moves later, may be bypassed by a tree-pruning algorithm.

Third, efficient algorithms must be devised and implemented. "Efficient" are those algorithms which can be executed in "polynomial" time, as opposed to inefficient" algorithms which usually need "exponential" time to execute.

For example, if the size of a problem is tripled, a polynomial time algorithm may require three times as much time (linear time algorithm) or nine times as much time (quadratic time algorithm), etc. In contrast, the next move generation example mentioned earlier uses an exponential time algorithm.

Efficient algorithms may represent the optimum in software design, however, it is sometimes very difficult to design them for certain problems. Theoreticians in computer science have come to the conclusion that there is a class of problems for which no efficient algorithms may exist, although no formal proof to the contrary has been produced. (An excellent discussion on the complexity of algorithms and intractable problems can be found in Ref. 3.)

And fourth, heuristic methods may be used when no rigorous algorithms can be found. Heuristics encompass all those trial methods that, even though they have not been proven mathematically and don't always work, can reduce the size of a big computational problem to a manageable size.

# DB MASTER.™ THE TOP SELLING DATA BASE MANAGER JUST GOT BETTER.

In less than a year, DB MASTER has become the top selling data base manager for the Apple II. And for good reason. DB MASTER has the features that make information management easy and efficient. But we didn't stop there. You asked for more features. We listened—and made DB MASTER even better.

## MORE FEATURES IN DB MASTER VERSION THREE.

**Computed Fields.** Perfect for accounts receivable, inventory control and similar applications. Each record may now include up to 10 computed fields. And field values are automatically re-computed and displayed each time a record is edited.

**Totaling in the Search Mode.** Tell DB MASTER which field to total and which records to use. A running summary of records found and the field's sum, average and standard deviation are displayed on the screen.

**Audit Trail.** Option to automatically print each new record as it is entered.

### NEW REPORT GENERATOR OPTION CAPABILITIES:

- Number Formatting with commas.
- Auto-Date Record Selection for printing daily, monthly or annual reports.
- Printing of averages and standard deviation when printing column totals.
- Ability to make last minute changes in printer and report parameters.

### PLUS THE FEATURES THAT MADE DB MASTER NUMBER 1.

Dynamic Prompting™. User designed screen forms. Short form capability. Powerful report generator. Custom DOS for faster retrieval and program chaining. Automatic data compaction. Password file protection. Multiple sort keys for fast, convenient records retrieval. And much, much more.

## MORE POWER WITH DB MASTER UTILITY PAK #1.

**Restructure.** Modify a file format without re-entering your records. Add, delete, move, modify or re-name fields—even add new computed fields to existing files.

**Interface.** Move data back and forth between your DB MASTER files and Data Interchange Format (DIF)* text files. Exchange data with Visicalc*, Visiplot*, Executive Secretary*, etc., or your own programs.

**Replicate.** Duplicate everything in your DB MASTER files *except* the records. Use the replicates for monthly or yearly files, or send them for data entry at multiple locations.

**Merge.** Combine data from two or more files with the same format (such as Replicates) into one file. Special "Selective Merge" and "Merge and Delete" options can maintain separate active and inactive files, build subfiles, and many similar tasks.

### UPDATE YOUR DATA BASE MANAGEMENT WITH DB MASTER VERSION THREE.

See the new DB MASTER Version Three at your local computer store. Put it through its paces. Then add the power of Utility Pak #1, the first in a planned series of Utility Paks.

If you're a registered owner of an earlier version of DB MASTER, send one or both of your program diskettes, plus $15.00, to STONEWARE for an update to Version Three.

**Is This Enough?**

What we have seen so far, is that innovation in machine hardware design along with the use of software speed-up techniques could bring computers closer to the ultimate goal in machine game playing and introduce better tools for the development of artificial intelligence.

How close can we expect to get to the perfect machine? Will the existing gap between a computer being rated chess expert and being rated world champion be easily bridged? Unfortunately, in solving an "exponential" difficulty problem such as this, small steps forward require tremendous amounts of effort. This has been the case with computer chess ever since compuers became available in the early 50's. A breakthrough in this area could happen any moment or could take years or even decades to occur.

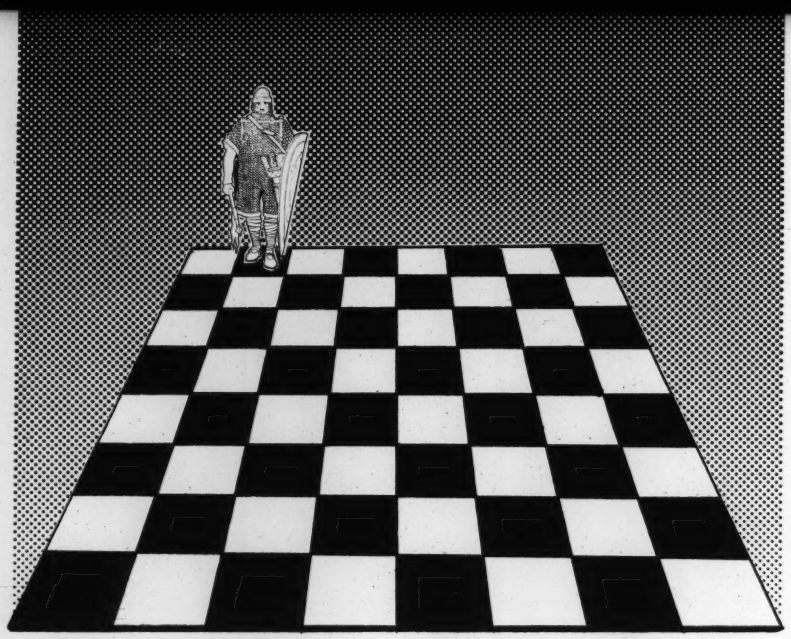
What cannot be ignored is the contrast between the capabilities of the human brain, which seem so limited in terms of performing repetitive operations (how many floating point multiplications can a person do per second?), but are so immense and unchallenged where creativity, recognition and imagination are concerned. This leads to the conclusion that the answer is more likely to be found through a combination of human ingenuity and computer versatility than through unbounded machine power alone.

***How close can we expect to get to the perfect machine?***

An example which demonstrates the difficulty of devising efficient algorithms for certain problems and also shows the fantastic savings in computation time if the right algorithm is used, is an algorithm that solves the century old "Knight's Tour" problem. I selected this particular algorithm because it can be easily programmed and, also, because of the recently renewed interest in it (Ref. 5 and Ref. 6).

This algorithm was first devised in 1823 by J.C. Warnsdorff, a German mathematician, and has been admired for its elegance and simplicity ever since.

The interest recently has been to implement it in program form so that certain ambiguities that may arise in its execution will be eliminated. The refinements proposed (Ref. 5, Ref. 6) apply only to an 8 x 8 board. In the discussion that follows a refinement that works for any size board is introduced along with its implementation in Basic.



**The "Knight's Tour"**

The "Knight's Tour" problem can be defined as follows: Given a board of n x n dimensions with $n^2$ squares, a knight—which must move according to the rules of chess—is placed on a particular square. The problem is to find a tour of $n^2$ -1 moves, if one exists, such that every square of the board is visited exactly once. Solutions for the "Knight's Tour" exist for boards 5 x 5 or larger. Boards with an even number of squares have tours starting from any square of the board, while boards with an odd number have tours from only those squares whose coordinates add up to an even number—(1,1), (5,3), etc.

This can be explained as follows: The squares on a board are alternately colored black and white. If the knight is on a white square, its next move must be made to a black square and vice versa. Also, on an odd-size board, the last step must be made on the same color square as the first step.

Let's take a look at the 5 x 5 board with 12 black squares and 13 white squares. If the first step is to be made on a white square, the knight will alternately step on 12 white squares and 12 black squares before it ends up in the 13th white square for a complete tour. If, however, its first move is on a black square, the last move can be made only on a black square, leaving at least one white square unvisited.

Solving the "Knight's Tour" problem was one of the favorite pastimes of the mathematicians of the 18th and 19th centuries. Euler, De Moivre, De Montmont, Vandermonde, Roget, and Warnsdorff, among others, tackled with the "Knight's Tour" and produced their own solutions. Some of them used trial and error techniques. Others, like Euler, attempted to introduce mathematical analysis to come up with more sophisticated solutions. The complexity of the problem limited most of their algorithms to board sizes up to 10 x 10.

The advent of computers made it appealing to attempt to solve this centuries-old problem by using raw machine power. Trial and error techniques, such as backtracking, presented a less formidable task for machines than they did for humans.

Backtracking is a trial and error algorithm that can be easily translated into program form. When applied to the "Knight's Tour" problem, it works in the following way: The knight follows a path, each step of which is selected on the basis of a simple rule. If there are two or more squares to choose from, take the first one clockwise and move on to the next step. If this path comes to a dead-end, backtrack one step and follow the second available square in the same clockwise fashion. Repeat this procedure until a solution is found or all possible moves are exhausted.

Obviously, such an algorithm does not take into account the nature of the problem at all. A solution can be produced quickly only if it happens that the path chosen at the beginning is the correct path. In the worst case, all possible paths must be examined before a solution is found, while on the average, half of the paths must be examined.

An implementation of such a backtracking algorithm in Pascal and its subsequent execution on a PDP 11/70 showed that a solution could be found for a 5 x 5 board in 52.5 seconds, and for a 6 x 6 board in 2.5 minutes. Likewise, a 7 x 7 board would require 1/2 hour, an 8 x 8 board would take three hours, and for a 20 x 20 board exclusive use of the PDP 11/70 for days would be necessary!

It is obvious that this algorithm is useless for large boards, as is the case for exponential time algorithms when the problem size increases.

**A Simple But Ingenious Algorithm**

The algorithm proposed by Warnsdorff in 1823 recognizes the need for a deeper examination of each board position. Before taking a step from a given square, all squares that are potential candidates for the next move (those within the range of the knight that have not been visited) are evaluated. This evaluation is based on the number of free squares that are available for a subsequent move from each of the candidate squares. The square that has the fewest accesses open to it is selected.

This first order-weighting algorithm has not, as yet, been proven mathematically, but has not been shown to fail either. Intuitively it seems, however, that by moving to the square with the least degree of freedom, the chances of leaving squares isolated at a corner of the board, or finding the knight cornered at a dead-end, are reduced.

Warnsdorff's algorithm, though hailed for its ingenuity, has been criticized on two accounts: first, because it is difficult to implement in practice on an actual chess board and, second, and most importantly, because it may fail if there are two or more squares with the same minimum weight—a first-order tie—and the wrong square is selected.

Interestingly, Warnsdorff thought it did not really matter which path was selected in case of such a tie. Later on, however, a handful of examples were constructed, after "much effort and ingenuity" (Ref. 7), that showed the tour to fail if the wrong square was chosen. Since Warnsdorff and the other mathematicians of that time did not have computers to aid them in their analysis, it was extremely difficult to test all tours from every square of a board and exhaustively examine all possibilities resulting from a given tie. Nowadays, this task is much easier, of course. It must be noted here, again, that those failing cases are not due to a problem in the original algorithm itself, but rather to the lack of a suitable second order tiebreaker.

The board representation difficulty cited in the past can be easily eliminated using the "poker-chip" method. The whole board is evaluated at the very beginning. Each square is examined to find how many free squares it connects to, and the corresponding number in poker chips is placed on it. During the knight's tour a chip is removed from all of the affected squares after a step is taken. A square found with zero chips on other than the $n^2$-1 step shows that that square was left isolated and the board can never be totally visited (a nice program terminating condition). In an actual program, the poker chips can be represented by negative numbers, and positive numbers used to show the step number. Figure 2 shows the 8 x 8 board after the first step to square (2,3).

The second difficulty with Warnsdorff's algorithm is due to lack of a suitable tie-breaker for a first-order tie. This problem is addressed in Refs. 5 and 6, but the proposed tie-breakers can only apply for boards of size 8 x 8.

One of these tie-breakers (Ref. 5) employs an arbitrary clockwise selection rule on the squares with equal weight. If that rule fails to produce a solution, the tour is repeated from the beginning using a counter-clockwise selection rule. The other tie-breaker (Ref. 6) takes into account the second order weight of each square, defined as the sum of the first order weights of all squares accessible to it at the beginning of the tour (the second order weights do not change during the course of the tour as happens with the first order weights).

Since these tie-breakers may fail for any size board, I started looking for a more universal tie-breaker. Several different tie-breakers were tried, such as minimum second order weight (but adjustable during the course of the tour), maximum second order weight, the square closest to the edge of the board, the square farthest away from the edge of the board, etc., but did not produce the desired result. It was possible, however, to use a combination of two such tie-breakers (if the one failed, then the tour was restarted using the second one) that has always produced a solution, when one existed, for any square board of 5 x 5 to 20 x 20. (Exhaustive tests were not

*Figure 3. The difference between the two tie-breaker rules is shown on a 5 x 5 board and tour starting coordinates at square (1,3). Both rules follow the same path up to the ninth step (Figure 3a), where a first order tie is encountered. The "min-max" tie-breaker examines the squares with the minimum weight tie to find the next step square available to each of them with the maximum weight. Then it selects that first order square having the second order square with the minimum weight among all maximum weights. Thus square (3,2) (Figure 3b) is selected with a weight of 2 over square (4,1) which has a weight of 4. This path leads to no solution. (Figure 3c). The "max-min" tie-breaker (the maximum of the minimum of the second order square weights) is then tried, and selects square (4,1) (Figure 3d). This path does produce a solution as shown in Figure 3e.*

# Raster Blaster

**Real pinball flippers** make this a game of strategy & skilled shot making.

**Animated shields** can shoot a lost ball back into play.

**Raster Blaster** for the Atari 800 and Apple II may be the first personal computer game that is copied for the arcade machines. It is so technically sophisticated and fun to play that it is sure to attract the big arcade manufacturers. But you can get it right now for your Apple or Atari!

**Three animated claws** trap the ball if they are enabled. When three balls become trapped, all are released for exciting multi-ball play.

**Three sets of targets** test your aim and timing. Hit all of them to enable the claws.

**Plus kickers, thumper-bumpers and** an animated **spinner** help to provide unmatched realism.

**Dealer inquiries invited**

*Figure 4.*

run for boards of size greater than 20 x 20; however, the nature of the problem suggests that this algorithm may apply on any size board).

The first of these two tie-breakers, "min-max," examines the squares with the minimum weight tie to find the next step square available to each of them with the maximum weight. Then it selects that first order square having the second order square with the minimum weight among all maximum weights. The second tie-breaker, "maximum," selects the square with the maximum among the minimum weights of the second order squares (Figure 3).

This tie-breaker is implemented in the Basic program shown. Its execution time increases linearly with the number of squares to be visited on the board, as it involves no backtracking. In the worst case, when both tie-breakers are used, the execution time is proportional to twice the number of squares. This means that if an 8 x 8 board takes four seconds of CPU time, a 20 x 20 board will take only 25 seconds while a 50 x 50 board will take about seven minutes. Execution times vary, depending on the computer it is run on.

So, this combination of tie-breakers can be successfully used in conjunction with Warnsdorff's algorithm to solve the "Knight's Tour" problem for any size board in reasonable program run times. Has this problem, then, been completely solved? Well, not quite yet. There is still the question of whether a single universal tie-breaker exists that can be implemented on any square or rectangular board, and, if that tie-breaker does exit, can Warnsdorff's algorithm be used to solve similar problems?

Whatever the answer to these questions may be, I hope that the "Knight's Tour" problem and Warnsdorff's algorithm have demonstrated, that ingenuity in algorithm design and computer programming in general, can be the most effective approach to computer game playing and the solution of complex problems. This is emphasized, of course, without overlooking the fact that generating a "Knight's Tour" with the above algorithm on a PDP 11/70 computer for a board of size 20 x 20 (Figure 4) takes less than one minute—a time that Warnsdorff could have never imagined, even in his wildest of dreams! □

# Upper and Lower Case for Your Model-I

**David Yon**

You've just received your TRS-80 with its new lower-case modification. You decided to go for it and get the good one from Radio Shack with the true descenders. You plug everything back in and decide to experiment with your new capability before doing anything serious.

Just load the lower-case driver in (what a strange filename), and you're in business. Look at those letters in lower case. How did you ever get along without it? All is well, correct? Maybe not.

While the lower-case kit on the whole is excellent (though a bit over-priced), the driver that Radio Shack supplies has some inherent problems. First, it eats up several hundred bytes of memory which means that if you want to type in an adventure or other long program using lower case, there may not be room.

Also, what about shifting between all-caps and the upper/lower case mode? I find it extremely awkward to hit the shift and "0" keys at the same time. These are but a few of the discoveries that you make the first time you load this little utility.

You shrug off the disadvantages and decide to type in a program from *Creative Computing*. So you load the driver, then TSHORT, and get down to business. Wait a minute. Why don't the keywords appear when you type a shift-letter, even when you're in the all-caps mode? This new driver seems to be shutting off TSHORT. So you load TSHORT without the driver.

But wait. You wanted this program in lower case. So you just have to type in the program without using TSHORT, but then you've wasted money on an extremely helpful utility that you can't use any more.

David Yon, R.D. #1-168, Richmond, VT 05477.

A close look reveals that the driver has also shut off the control characters available with the "new-ROM" Level-IIs (shift-down arrow-C enters a control-C from the keyboard.)

Well, now you can forget about that uncooperative driver. The driver that frustration forced me to write eliminates all of those problems.

First, it takes no memory (that's right, it resides in low memory below your program space), which means that you have given up none of your precious memory space, and also means that it will run on any size system, won't clash with any high-memory printer drivers, etc., and won't interfere with other programs such as TSHORT.

Second, it toggles the shift-lock with the shift-right arrow, which is much easier on the fingers and prevents accidentally going into double width. (However, it does mean you will lose the TAB keyword from TSHORT. Also you can still run TSHORT, and turn it off and on with a single keystroke. Lastly, any other special feature that your particular keyboard has will still be there.

To use the driver, merely type and assemble the source code, and put it on tape. Now, everytime you want to power-up in Basic, simply make it a habit to load the lower-case driver first.

All you have to do is type SYSTEM, then the filename that you specified when you assembled the driver. When the driver is loaded, simply hit Break to enter Basic.

When you first load the driver, you are locked into all-caps (actually, all-caps is the normal mode for the TRS-80 keyboard, where you press shift to get lower-case). To shift between all-caps and upper/lower (typewriter) keyboard, hit shift-right arrow. Notice that you don't enter double-width, a feature I consider more of a blessing than a fault. Notice, too, that if you have the new ROM, you will still be able to enter control characters.

I seriously doubt that the driver will work on disk as-is, you will probably have to relocate it somewhere else if you want to use it with a disk system.

Things become a bit more complicated if you want to use TSHORT with the driver, however. To make it easier, I put a copy of TSHORT directly after a copy of the driver (an example of a legal use for System Copy).

To power-up with lower case and TSHORT, just type SYSTEM and the filename of the driver, and let the driver load. After it loads, type TS and let TSHORT load. Now start TSHORT as before.

Notice that TSHORT functions exactly as before when first loaded. However, when you hit the shift-down arrow, you enter the lower-case keyboard mode, and TSHORT is effectively shut off. To return to the TSHORT keyboard, hit the toggling keystroke again; you can have lower case and TSHORT running at the same time,

# Tired Of Your GENERAL LEDGER?

# VERSA-LEDGER

★ THE ULTIMATE PERSONAL CHECK REGISTER

★ A PROFESSIONAL ACCOUNTING SYSTEM

★ A PERSONAL FINANCIAL MANAGER

★ A SMALL BUSINESS ACCOUNTING SYSTEM

★ A COMPLETE GENERAL LEDGER

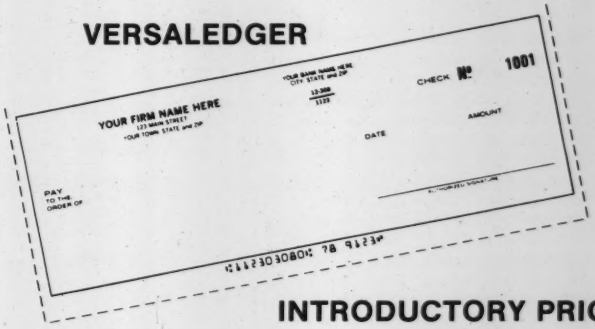
FOR YOUR TRS-80 MODEL I, II , III or COLOR COMPUTER • APPLE II • I.B.M. • XEROX • ATARI
ALL MICROSOFT BASIC COMPUTERS

## HOW IT WORKS . . . .

**VERSALEDGER** is a complete accounting system that grows as you or your business grows. To start, your VERSALEDGER acts as a simple method of keeping track of your checkbook. Just enter your check number, date and to whom the check is made out to. As you or your business grows, you may add more details to your transactions . . . . account number, detailed account explanations, etc.

- VERSALEDGER can give you an instant cash balance at anytime. **(IF YOU WANT IT TO)**
- VERSALEDGER can be used as a small personal checkbook register. **(IF YOU WANT IT TO)**
- VERSALEDGER can be used to run your million dollar corporation. **(IF YOU WANT IT TO)**
- VERSALEDGER prints checks. **(IF YOU WANT IT TO)**
- VERSALEDGER stores all check information forever. **(IF YOU WANT IT TO)**
- VERSALEDGER can handle more than one checkbook. **(IF YOU WANT IT TO)**
- VERSALEDGER can be used to replace a general ledger. **(IF YOU WANT IT TO)**

**VERSALEDGER**



**INTRODUCTORY PRICE**

**$99.95**

- VERSALEDGER HAS AN ALMOST UNLIMITED CAPACITY . . . .
  - (300 checks per month on single density 5¼" disk drives such as the TRS-80 Model-I)
  - (500 checks per month on the Apple II)
  - (2400 checks per month on the TRS-80 Model III)
  - (6000 checks per month on the TRS-80 Model II)
  - (3000 checks per month on single density 8" CP/M)
- VERSALEDGER will soon have an add-on payroll package. **(IF YOU NEED IT)**

**— CAN BE USED WITH 1 or MORE DISK DRIVES —**

**VERSALEDGER HAS BEEN CREATED WITH THE FIRST TIME COMPUTER USER IN MIND**

# Problem

**The world is full of intriguing problems that never got into a textbook.**

**Problems for Computer Solution**
**by Steve Rogowski**

Ninety intriguing and fascinating problems, each thoroughly discussed and referenced, make an excellent source of exercises in research and preliminary investigation. Eleven types of problems are provided in the following areas: arithmetic, algebra, geometry, trigonometry, number theory, probability, statistics, calculus and science. Author Stephen Rogowski of SUNY-Albany has included several problems which have never been solved. He feels that some research and an attempt to solve these will sharpen students' insight and awareness.

Some of the problems are not new like the one asking how much the $24 the Indians were paid for Manhattan would be worth today had it been deposited in a bank. However, this problem was revised to have a variable interest rate so it would be a challenge to program. Of course, many of the problems are new and have never been in print before.

The student edition has 106 pages and includes all 90 problems (with variations), 7 appendices and a complete bibliography. Cost is $4.95.

The 182-page teacher edition contains solutions to the problems, each with a complete listing in Basic, sample runs, and in-depth analyses explaining the algorithms and theory involved. Cost is $9.95.

To order send payment* plus $2.00 postage and handling to Creative Computing, Dept. C062E, One Park Avenue, Room 458, New York, NY 10016. Orders may also be charged to your Visa, Mastercard or American Express account — by mail include credit card name, number and expiration date, or if you prefer, use our 24-hour toll-free number, 800-631-8112. In N.J. only 201-540-0445.

## Upper/Lower Case, continued...

and toggle between them with a single keystroke. Note that you must load the driver first, or TSHORT will not work. As a matter of fact, if you load anything that taps into the keyboard or video routines in the ROM, you should load the driver first if you plan to use it.

### The Program

Referring to the listing, lines 120-140 contain the pointers to direct Basic to our routine, they load directly into memory with the rest of the program.

Lines 160-280 contain the video routine which is almost identical to the one found in ROM, except that it doesn't test for and screen out lower-case characters, as it displays any size letter.

The remaining lines function as follows:

Line 290 calls the ROM keyboard routine.

Line 300 tests for no keystroke.

Line 320 loads HL with the location of the flag byte (0=shift lock, 255=typewriter).

Line 330 tests for the shift-down arrow, and activates the shift-lock.

Line 360 gets the flag byte, tests for shift-lock, and returns the keystroke "as-is."

If the program gets as far as lines 400 to 430 these lines check to see if we are dealing with a letter.

If we have a letter, line 440 will change an upper-case letter to lower-case and vice versa.

The routine beginning with line 460, the shift-lock routine, toggles the flag byte between 0 (all-caps) and 255 (upper/lower case).

There are several possibilities for indirect control over my routine. First, you can change the shift-lock keystroke by changing the value in line 330 to the value of your new keystroke. Or, to allow program control over the mode the keyboard is in, change memory location 16408 to 0 for upper case only (for answering "Y" or "N" for example), and to 255 for the typewriter mode (for typing in a person's name, etc.). To lock the keyboard into either mode, set 16408 (as described above), then set 16485 to 0. To allow the user to control the mode again, return 16485 to 25. As a final short-cut, to lock the computer into lower case without changing 16485 and doing two POKEs, set 16408 to any number between 254 and 1. □

## BUSINESS 100 PROGRAM LIST

| | | |
|---|---|---|
| 1 | RULE78 | Interest Apportionment by Rule of the 78's |
| 2 | ANNU1 | Annuity computation program |
| 3 | DATE | Time between dates |
| 4 | DAYYEAR | Day of year a particular date falls on |
| 5 | LEASEINT | Interest rate on lease |
| 6 | BREAKEVN | Breakeven analysis |
| 7 | DEPRSL | Straightline depreciation |
| 8 | DEPRSY | Sum of the digits depreciation |
| 9 | DEPRDB | Declining balance depreciation |
| 10 | DEPRDDB | Double declining balance depreciation |
| 11 | TAXDEP | Cash flow vs. depreciation tables |
| 12 | CHECK2 | Prints NEBS checks along with daily register |
| 13 | CHECKBK1 | Checkbook maintenance program |
| 14 | MORTGAGE/A | Mortgage amortization table |
| 15 | MULTMON | Computes time needed for money to double, triple, etc. |
| 16 | SALVAGE | Determines salvage value of an investment |
| 17 | RRVARIN | Rate of return on investment with variable inflows |
| 18 | RRCONST | Rate of return on investment with constant inflows |
| 19 | EFFECT | Effective interest rate of a loan |
| 20 | FVAL | Future value of an investment (compound interest) |
| 21 | PVAL | Present value of a future amount |
| 22 | LOANPAY | Amount of payment on a loan |
| 23 | REGWITH | Equal withdrawals from investment to leave 0 over |
| 24 | SIMPDISK | Simple discount analysis |
| 25 | DATEVAL | Equivalent & nonequivalent dated values for oblig. |
| 26 | ANNUDEF | Present value of deferred annuities |
| 27 | MARKUP | % Markup analysis for items |
| 28 | SINKFUND | Sinking fund amortization program |
| 29 | BONDVAL | Value of a bond |
| 30 | DEPLETE | Depletion analysis |
| 31 | BLACKSH | Black Scholes options analysis |
| 32 | STOCVAL1 | Expected return on stock via discounts dividends |
| 33 | WARVAL | Value of a warrant |
| 34 | BONDVAL2 | Value of a bond |
| 35 | EPSEST | Estimate of future earnings per share for company |
| 36 | BETAALPH | Computes alpha and beta variables for stock |
| 37 | SHARPE1 | Portfolio selection model-i.e. what stocks to hold |
| 38 | OPTWRITE | Option writing computations |
| 39 | RTVAL | Value of a right |
| 40 | EXPVAL | Expected value analysis |
| 41 | BAYES | Bayesian decisions |
| 42 | VALPRINF | Value of perfect information |
| 43 | VALADINF | Value of additional information |
| 44 | UTILITY | Derives utility function |
| 45 | SIMPLEX | Linear programming solution by simplex method |
| 46 | TRANS | Transportation method for linear programming |
| 47 | EOQ | Economic order quantity inventory model |
| 48 | QUEUE1 | Single server queueing (waiting line) model |
| 49 | CVP | Cost-volume-profit analysis |
| 50 | CONDPROF | Conditional profit tables |
| 51 | OPTLOSS | Opportunity loss tables |
| 52 | FQUOQ | Fixed quantity economic order quantity model |

| NAME | DESCRIPTION |
|---|---|
| 53 FQEOWSH | As above but with shortages permitted |
| 54 FQEOQPB | As above but with quantity price breaks |
| 55 QUEUECB | Cost-benefit waiting line analysis |
| 56 NCFANAL | Net cash-flow analysis for simple investment |
| 57 PROFIND | Profitability index of a project |
| 58 CAP1 | Cap. Asset Pr. Model analysis of project |
| 59 WACC | Weighted average cost of capital |
| 60 COMPBAL | True rate on loan with compensating bal. required |
| 61 DISCBAL | True rate on discounted loan |
| 62 MERGANAL | Merger analysis computations |
| 63 FINRAT | Financial ratios for a firm |
| 64 NPV | Net present value of project |
| 65 PRINDLAS | Laspeyres price index |
| 66 PRINDPA | Paasche price index |
| 67 SEASIND | Constructs seasonal quantity indices for company |
| 68 TIMETR | Time series analysis linear trend |
| 69 TIMEMOV | Time series analysis moving average trend |
| 70 FUPRINF | Future price estimation with inflation |
| 71 MAILPAC | Mailing list system |
| 72 LETWRT | Letter writing system-links with MAILPAC |
| 73 SORT3 | Sorts list of names |
| 74 LABEL1 | Shipping label maker |
| 75 LABEL2 | Name label maker |
| 76 BUSBUD | DOME business bookkeeping system |
| 77 TIMECLCK | Computes weeks total hours from timeclock info. |
| 78 ACCTPAY | In memory accounts payable system-storage permitted |
| 79 INVOICE | Generate invoice on screen and print on printer |
| 80 INVENT2 | In memory inventory control system |
| 81 TELDIR | Computerized telephone directory |
| 82 TIMUSAN | Time use analysis |
| 83 ASSIGN | Use of assignment algorithm for optimal job assign. |
| 84 ACCTREC | In memory accounts receivable system-storage ok |
| 85 TERMSPAY | Compares 3 methods of repayment of loans |
| 86 PAYNET | Computes gross pay required for given net |
| 87 SELLPR | Computes selling price for given after tax amount |
| 88 ARBCOMP | Arbitrage computations |
| 89 DEPRSF | Sinking fund depreciation |
| 90 UPSZONE | Finds UPS zones from zip code |
| 91 ENVELOPE | Types envelope including return address |

# Printer Control Codes From Within Apple Writer

J. Michael Riley

To Apple II owners whose machines are equipped with a Dan Paymar Lower Case Adapter and use Apple Writer, I highly recommend modifying the program to display lower case directly on the screen as described by John E. Stith in the February 1981 issue of *Creative Computing*. I have used the modified version for over a year and have had no problems whatever.

If your printer has the capability of varied print fonts, as mine does, you may have wondered how to send the printer the necessary control codes from within Apple Writer texts. The difficulty with direct entry of these control codes (usually ASCII control characters) is that the Apple Writer TEDITOR program uses control codes entered from the keyboard to maneuver the cursor during editing, thus effectively preventing the user from entering them into the body of the text.

I use a prehistoric IDS IP-225, which can produce enhanced (double-width) or normal characters in four different print densities under software control. The printer will also perform a carriage return without linefeed, which can be used for double-striking for emphasis, and a 1/3 linefeed, which can be used for underlining with the hyphen.

To embed these control codes in texts, you must place the necessary ASCII hexadecimal codes directly into the portion of the memory of your computer that the Apple Writer program uses for the text. The easiest way to do this is as follows:

1. Boot your system with the Apple Writer disk modified as directed in Mr. Stith's article. (The unmodified program will not work using this technique because of the way both the TEDITOR and PRINTER programs interpret and display the text memory.)

J. Michael Riley, 619 N. Cascade Ave., Suite 3, Colorado Springs, CO 80903.

2. Exit the program by pressing Q Return.

3. Enter the Apple system monitor by typing CALL -151 Return.

4. Type 1900: 83 01 02 1C 1D 1E 1F 0B 09 4B 0D 60 Return. This builds a short text in memory where Apple Writer expects to find it. Hex 83 is the beginning marker, and hex 60 is the end marker of the file. In between are the hex equivalents of the appropriate printer control codes for my printer (and many others) as follows:

01 = Control A = Enhanced Mode
02 = Control B = Normal Mode
1C = Control / = 8.3 Characters/inch
1D = Control ] = 10 Characters/inch
1E = Control ↑ = 12 Characters/inch
1F = Control < = 16.5 Characters/inch
0B = Control K = Vertical Tab (1/3 line feed)
09 4B turns off the Apple Parallel Card automatic linefeed
0D = Control M = Carriage Return

These control codes may not be applicable to your printer or printer controller card; check your manual.

5. Type 3D0G Return to re-enter Basic.

6. Type BRUN TEDITOR Return.

7. After the editor program is loaded, and the menu appears, type E Return. The text on the screen will consist of a block of inverse characters, and one flashing one (a K). Using the normal Apple Writer editing techniques, you may now add a brief explanation of each code for easier reading and use. Return to the Apple Writer menu and type S Return. Save the control codes as you would any other Apple Writer file. I saved mine right on the working master diskette under the imaginative name CONTROL CODES.

8. You may now insert any of these desired control codes within your own text by parking the cursor where you want the code, and using the Apple Writer "insert" command (Control I). When the editor asks which file to insert, respond with CONTROL CODES (or whatever name you have chosen). Then simply delete the control codes you do not want.

(Editor's Note—Readers may wish to make a series of files, with one for each control function. This way, no deletions will be required when a control file is inserted.)

I have used these codes with great success, although several of them required some experimentation before I got predictable results. For example, my printer is set up so that the controller card issues the linefeed automatically with every carriage return. This is defeated as directed in the documentation for the card, and as noted above.

Turning off the linefeed is useful for over-striking and forming composite characters. However, unless the automatic linefeed is turned back on again, the entire remainder of the text is printed with no paper advance—not too legibly, I might add. The card documentation does not specify how to restore automatic linefeed, but it happens to be with the same code as is used to turn it off.

Another subtlety of an embedded character for carriage return is that the print head returns completely to the left margin regardless of the Apple Writer margin setting. The spaces used for margin setting must be accounted for when setting up underlines or over-strikes.

This simple technique will allow you to access many of the special capabilities of your printer from within Apple Writer. It also has one unique and exciting advantage over commercially available software—it's free! □

# DYNACOMP

*Quality software for*:*

**ATARI** — **TRS-80 (Level II)****
**PET/CBM** — **NORTH STAR*****
**APPLE II Plus** — **CP/M Disks/Diskettes**
**OSBORNE-1** — **( See Availability box MBASIC/CBASIC )**
**ALTAIR******** — **SUPERBRAIN*******

## CARD GAMES

**BRIDGE MASTER (North Star only)** — **Price: $21.95 Diskette**
If you liked DYNACOMP'S BRIDGE 2.0, you will absolutely love BRIDGE MASTER. BRIDGE MASTER is a comprehensive bridge program designed to provide hours of challenging competition. Bidding features include the Blackwood convention, Stayman convention, pre-emptive openings, and recognition of demand bids and jump-shift responses. After playing a specific hand, you may replay the same hand, with the option of switching cards with your computer opponents. This feature allows you to compare your bidding and playing skills to BRIDGE MASTER. Bonuses for game contracts and slams are awarded as in duplicate bridge. Doubled contracts are scored based upon a computer assigned vulnerability. A score card is displayed at the conclusion of each hand. The score card displays a summary of total hands played, total points scored, number of contracts made and set, and % bids made. BRIDGE MASTER is clearly the best computer bridge program available.
DYNACOMP'S previous BRIDGE 2.0 customers may upgrade to BRIDGE MASTER for a nominal charge of $5.00 plus postage and handling (see ordering information box).

**BACCARAT (Atari only)** — **Price: $18.95 Cassette/$22.95 Diskette**
This is the European card game which is the favorite of the Monte Carlo jet set. Imagine yourself at the gaming table with 007 to your left and Goldfinger to your right. Learn and play BACCARAT at your leisure on the Atari. Contains full high resolution color graphics and matching sound. Runs in 16K. Requires one joystick.

**GIN RUMMY (Apple diskette only)** — **Price: $22.95 Diskette**
This is the best micro computer implementation of GIN RUMMY existing. The computer plays exceptionally well, and the HIRES graphics are superb. What else can be said?

**POKER PARTY (Available for all computers)** — **Price: $17.95 Cassette/$21.95 Diskette**
POKER PARTY is a draw poker simulation based on the book, POKER, by Oswald Jacoby. This is the most comprehensive version available for microcomputers. The party consists of yourself and six other (computer) players. Each of these players (you will get to know them) has a different personality in the form of a varying propensity to bluff or fold under pressure. Practice with POKER PARTY before going to that expensive game tonight! Apple cassette and diskette versions require a 32 K (or larger) Apple II.

**GO FISH (Available for all computers)** — **Price: $14.95 Cassette/$18.95 Diskette**
GO FISH is a classic children's card game. The opponent is a friendly computer with user inputs that are simple enough for small children to easily master. The Apple and Atari versions employ high resolution graphics for the display of hands. A must for children!

**BLACKJACK COACH (32K TRS-80 only)** — **Price $29.95 Cassette/$33.95 Diskette**
BLAGKJACK COACH is both a game and an educational tool. With this program you may quantitatively test standard and special playing and betting methods, including the several card count schemes. You can simply play, play with the computer as a coach, or statistically test your method under long run automatic play. All the standard player choices are included: insurance, splitting pairs, double downs and surrender (optional). The computer analyzes the technique and provides detailed summary reports which statistically pinpoint the strengths and weaknesses of your play. Don't risk your money at the tables until you have practiced with BLACKJACK COACH!

## THOUGHT PROVOKERS

**MANAGEMENT SIMULATOR (Atari, North Star, OSBORNE and CP/M only)** — **Price: $19.95 Cassette $23.95 Diskette**
This program is both an excellent teaching tool as well as a stimulating intellectual game. Based upon similar games played at graduate business schools, each player or team controls a company which manufacturers three products. Each player attempts to outperform his competitors by setting selling prices, production volumes, marketing and design expenditures etc. The most successful firm is the one with the highest stock price when the simulation ends.

**FLIGHT SIMULATOR (Available for all computers)** — **Price: $17.95 Cassette/$21.95 Diskette**
A realistic and extensive mathematical simulation of take-off, flight and landing. The program utilizes aerodynamic equations and the characteristics of a real airfoil. You can practice instrument approaches and navigation using radials and compass headings. The more advanced flyer can also perform loops, half-rolls and similar aerobatic maneuvers. Although this program does not employ graphics, it is exciting and very addictive. See the software review in COMPUTRONICS. Runs in 16K Atari.

**VALDEZ (Available for all computers)** — **Price: $15.95 Cassette/$19.95 Diskette**
VALDEZ is a computer simulation of supertanker navigation in the Prince William Sound/Valdez Narrows region of Alaska. Included in this simulation is a realistic and extensive 256 × 256 element map, portions of which may be viewed using the ship's alphanumeric radar display. The motion of the ship itself is accurately modelled mathematically. The simulation also contains a model for the tidal patterns in the region, as well as other traffic (outgoing tankers and drifting icebergs). Chart your course from the Gulf of Alaska to Valdez Harbor! See the software reviews in 80 Software Critique and Personal Computing.

**BACKGAMMON 2.0 (Atari, North Star, OSBORNE and CP/M only)** — **Price: $14.95 Cassette/$18.95 Diskette**
This program tests your backgammon skills and will also improve your game. A human can compete against a computer or against another human. The computer can even play against itself. Either the human or the computer can double or generate dice rolls. Board positions can be created or saved for replay. BACKGAMMON 2.0 plays in accordance with the official rules of backgammon and is sure to provide many fascinating sessions of backgammon play.

**CHESS MASTER (North Star and TRS-80 only)** — **Price: $19.95 Cassette/$23.95 Diskette**
This complete and very powerful program provides five levels of play. It includes castling, en passant captures and the promotion of pawns. Additionally, the board may be preset before the start of play, permitting the examination of "book" plays. To maximize execution speed, the program is written in assembly language (by SOFTWARE SPECIALISTS of California). Full graphics are employed in the TRS-80 version, and two widths of alphanumeric display are provided to accommodate North Star users. See review in onComputing.

**FOREST FIRE! (Atari only)** — **Price: $14.95 Cassette/$18.95 Diskette**
Using excellent graphics and sound effects, this simulation puts you in the middle of a forest fire. Your job is to direct operations to put out the fire while compensating for changes in wind, weather and terrain. Not protecting valuable structures can result in startling penalties. Life-like variables are provided to make FOREST FIRE! very suspenseful and challenging. No two games have the same setting and there are 3 levels of difficulty.

**BLACK HOLE (Apple only)** — **Price: $14.95 Cassette/$18.95 Diskette**
This is an exciting graphical simulation of the problems involved in closely observing a black hole with a space probe. The object is to enter and maintain, for a prescribed time, an orbit close to a small black hole. This is to be achieved without coming so near the anomaly that the tidal stress destroys the probe. Control of the craft is realistically simulated using side jets for rotation and main thrusters for acceleration. This program employs Hi-Res graphics and is educational as well as challenging.

**SPACE EVACUATION! (Apple, Atari and TRS-80 only)** — **Price: $15.95 Cassette/$19.95 Diskette**
Can you colonize the galaxy and evacuate the Earth before the sun explodes? Your computer becomes the ship's computer as you explore the universe to relocate millions of people. This simulation is particularly interesting as it combines many of the exciting elements of classic space games with the mystery challenge of ADVENTURE.

**MONARCH (Atari only)** — **Price: $11.95 Cassette/$15.95 Diskette**
MONARCH is a fascinating economic simulation requiring you to survive an 8-year term as your nation's leader. You determine the amount of acreage devoted to industrial and agricultural use, how much food to distribute to the populace and how much should be spent on pollution control. You will find that all decisions involve a compromise and that it is not easy to make everyone happy. Runs in 16K Atari.

**CHOMPELO (Atari only)** — **Price: $11.95 Cassette/$15.95 Diskette**
CHOMPELO is really two challenging games in one. One is similar to NIM; you must bite off part of a cookie, but avoid taking the poisoned portion. The other game is the popular board game REVERSI. It fully uses the Atari's graphics capability, and is hard to beat. This package will run on a 16K system.

## AVAILABILITY

DYNACOMP software is supplied with complete documentation containing clear explanations and examples. Unless otherwise specified, all programs will run within 16K program memory space (ATARI requires 24K). Except where noted, programs are available on ATARI, PET, TRS-80 (Level II) and Apple (Applesoft) cassette and diskette as well as North Star single density (double density compatible) diskette. Additionally, most programs can be obtained on standard (IBM 3740 single density/double density compatible format) 8" CP/M floppy disks for systems running under MBASIC or CBASIC (for example, Altos, Xerox 820 and many others). 5¼" CP/M diskettes are available for the North Star and Osborne computer systems.

*ATARI, PET/CBM, NORTH STAR, CP/M, IBM, OSBORNE, SUPERBRAIN and XEROX are registered tradenames and/or trade marks.

**Except where noted, all TRS-80 Model I software is available on cassette (only) for the TRS-80 Model III. Exceptions: VALDEZ, CRIBBAGE, GRAFIX, CHESSMASTER. TRS-80 diskettes are not supplied with either DOS or BASIC.

***For most North Star disk-based systems. DYNACOMP presently does not support the new North Star Advantage.

****For Altair systems having Microsoft BASIC.

*****For SUPERBRAIN systems running under MBASIC or CBASIC (state which).

## DYNACOMP OFFERS THE FOLLOWING

- Widest variety
- Guaranteed quality
- Fastest delivery
- Friendly service
- Free catalog
- Toll free order phone

## AND MORE...

**STARTREK 3.2 (Available for all computers)** — **Price: $11.95 Cassette/$15.95 Diskette**
This is the classic Startrek simulation, but with several new features. For example, the Klingons now shoot at the Enterprise without warning while also attacking starbases in other quadrants. The Klingons also attack with both light and heavy cruisers and move when shot at! The situation is hectic when the Enterprise is besieged by three heavy cruisers and a starbase S.O.S. is received! The Klingons get even! See the software reviews in A.N.A.L.O.G., 80 Software Critique and Game Merchandising.

NEW **LIL' MEN FROM MARS (Atari only)** — **Price: $19.95 Cassette/$23.95 Diskette**
Defend yourself! The little men from Mars are out to get you if you don't get them first. This is a hilarious high resolution animated graphics (arcade) game which exercises much of the Atari's power. Requires one joystick.

**SPACE TILT (Apple and Atari only)** — **Price: $10.95 Cassette/$14.95 Diskette**
Use the game paddles to tilt the plane of the TV screen to "roll" a ball into a hole in the screen. Sound simple? Not when the hole gets smaller and smaller! A built-in timer allows you to measure your skill against others in this habit-forming action game.

NEW **ESCAPE FROM VOLANTIUM (Atari only)** — **Price: $15.95 Cassette/$19.95 Diskette**
Bring the action and excitement of an arcade into your home with ESCAPE FROM VOLANTIUM! To escape you must maneuver your space ship around obstacles and laser blast the dragon (without being eaten). If he is killed with a direct shot (not just a leg lopped off), a door opens to the outside. However, the door does not stay open indefinitely. If you fail to escape in time, the door closes and a new dragon appears. Sometimes you can smash through the door by repeatedly chipping away at it. Other times it is impervious. At the higher levels of play more obstacles and dragons appear, adding to the excitement. Uses high resolution graphics and sound. Runs in 16K.

**ALPHA FIGHTER (Atari only)** — **Price: $12.95 Cassette/$16.95 Diskette**
Two excellent graphics and action programs in one! ALPHA FIGHTER requires you to destroy the alien starships passing through your sector of the galaxy. ALPHA BASE is in the path of an alien UFO invasion; let five UFO's get by and the game ends. Both games require the joystick and get progressively more difficult the higher you score! ALPHA FIGHTER will run on 16K systems.

**THE RINGS OF THE EMPIRE (Atari only)** — **Price: $14.95 Cassette/$18.95 Diskette**
The empire has developed a new battle station protected by rotating rings of energy. Each time you blast through the rings and destroy the station, the empire develops a new station with more protective rings. This exciting game runs on 16K systems, employs extensive graphics and sound and can be played by one or two players.

**INTRUDER ALERT (Atari only)** — **Price: $14.95 Cassette/$18.95 Diskette**
This is a fast paced graphics game which places you in the middle of the "Dreadstar" having just stolen its plans. The droids have been alerted and are directed to destroy you at all costs. You must find and enter your ship to escape with the plans. Five levels of difficulty are provided. INTRUDER ALERT requires a joystick and will run on 16K systems.

NEW **MIDWAY (Atari only)** — **Price: $14.95 Cassette/$18.95 Diskette**
MIDWAY is an exciting extension of the game of Battleship. It mixes the challenges of strategy and chance. Your opponent can be another human or the computer. Color graphics and sound are both included. Runs in 16K.

**TRIPLE BLOCKADE (Atari only)** — **Price: $14.95 Cassette/$18.95 Diskette**
TRIPLE BLOCKADE is a two-to-three player graphics and sound action game. It is based on the classic video arcade game which millions have enjoyed. Using the Atari joysticks, the object is to direct your blockading line around the screen without running into your opponent(s). Although the concept is simple, the combined graphics and sound effect lead to "high anxiety".

**GAMES PACK I (Available for all computers)** — **Price: $10.95 Cassette/$14.95 Diskette**
GAMES PACK I contains the classic computer games of BLACKJACK, LUNAR LANDER, CRAPS, HORSERACE, SWITCH and more. These games have been combined into one large program for ease in loading. They are individually accessed by a convenient menu. This collection is worth the price just for the DYNACOMP version of BLACKJACK.

**GAMES PACK II (Available for all computers)** — **Price: $10.95 Cassette/$14.95 Diskette**
GAMES PACK II includes the games CRAZY EIGHTS, JOTTO, ACEY-DUCEY, LIFE, WUMPUS and others. As with GAMES PACK I, all the games are loaded as one program and are called from a menu. You will particularly enjoy DYNACOMP's version of CRAZY EIGHTS.

Why pay $7.95 or more per program when you can buy a DYNACOMP collection for just $10.95?

**MOON PROBE (Atari and North Star only)** — **Price: $11.95 Cassette/$15.95 Diskette**
This is an extremely challenging "lunar lander" program. The user must drop from orbit to land at a predetermined target on the moon's surface. You control the thrust and orientation of your craft plus direct the rate of descent and approach angle. Runs in 16K Atari.

**SPACE TRAP (Atari only, 16K)** — **Price: $14.95 Cassette/$18.95 Diskette**
This galactic "shoot'em up" arcade game places you near a black hole. You control your spacecraft using the joystick and attempt to blast as many of the alien ships as possible before the black hole closes about you.

NEW **CHIRP INVADERS (PET/CBM only)** — **Price: $14.95 Cassette/$18.95 Diskette**
CHIRP INVADERS is an addictive game using action graphics. A Federation space station must be reached before the Chirps conquer the Earth. Stationary obstacles, moving meteors, and the attacking Chirps must all be avoided for a successful journey. Good luck.

NEW **SUPER SUB CHASE (Atari only)** — **Price: $19.95 Cassette/$23.95 Diskette**
SUPER SUB CHASE simulates a search and destroy mission. Set your course and keep an eye on the sonar readings as you hunt for the hidden submarine. Set the depth charge explosion depth and watch them sink towards the sub. This is an addictive game which takes advantage of the Atari's graphics and sound capabilities. One or two players. Joystick(s) required.

## ADVENTURE

**CRANSTON MANOR ADVENTURE (North Star and CP/M only)** — **Price: $19.95 Diskette**
At last! A comprehensive Adventure game for North Star and CP/M systems. CRANSTON MANOR ADVENTURE takes you into mysterious CRANSTON MANOR where you attempt to gather fabulous treasures. Lurking in the manor are wild animals and robots who will not give up the treasures without a fight. The number of rooms is greater and the associated descriptions are much more elaborate than the current popular series of Adventure programs, making this game the top in its class. Play can be stopped at any time and the status stored on diskette. Not available in 5¼" CP/M format.

**GUMBALL RALLY ADVENTURE (North Star only, 48K)** — **Price: $21.95 Diskette**
Take part in this outlaw race from the east coast to the west coast. The goal is to find your way to the finish line while maintaining the highest possible speed. You may choose one of five cars available at the garage. The choice will affect your speed and range. Remember to take spare parts and don't get caught speeding!

NEW **UNCLE HARRY'S WILL (North Star only, 40K)** — **Price: $24.95 Diskette**
Uncle Harry has died and has left you everything. However, he has neglected to mention where everything is! Instead, his will consists of a poem which contains clues. You will have to travel all over the United States both by car and on foot to solve the puzzle, and there are over 300 locations to probe. Be careful and watch out for red herrings!

## SPEECH SYNTHESIS

DYNACOMP is now distributing the new and revolutionary TYPE-'N-TALK™ (TNT) speech synthesizer from Votrax. Simply connect TNT to your computer's serial interface, enter text from the keyboard and hear the words spoken. TNT is the easiest-to-program speech synthesizer on the market. It uses the least amount of memory and provides the most flexible vocabulary available anywhere!

TYPE-'N'-TALK List price $375. DYNACOMP'S price $319.95 plus $5.00 for shipping and handling.

**TALK TO ME (T'N'T Atari only, 24K)** — **Price: $14.95 Cassette/$18.95 Diskette**
This program presents a superb tutorial on speech synthesis using the Atari 800 and TYPE 'N TALK™. TALK TO ME will illustrate normal word generation as well as phoneme generation. The documentation includes many helpful programming tips. TALK TO ME has been demonstrated on network (CBS) TV!

## MISCELLANEOUS

**CRYSTALS (Atari only)** — **Price: $ 9.95 Cassette/$13.95 Diskette**
A unique algorithm randomly produces fascinating graphics displays accompanied with tones which vary as the patterns are built. No two patterns are the same, and the combined effect of the sound and graphics are mesmerizing. CRYSTALS has been used in local stores to demonstrate the sound and color features of the Atari. Runs in 16K Atari.

**NORTH STAR SOFTWARE EXCHANGE (NSSE) LIBRARY**
DYNACOMP now distributes the 23 volume NSSE library. These diskettes each contain many programs and offer an outstanding value for the purchase price. They should be part of every North Star user's collection. Call or write DYNACOMP for details regarding the contents of the NSSE collection.
Price: $9.95 each/$7.95 each (4 or more)
The complete collection may be purchased for $149.95

NEW **5¼" DISKETTES (soft sectored/ten sectored)** — **Price: $39.95/20 Diskettes**
As you might imagine, DYNACOMP purchases diskettes in large quantities and at wholesale prices. We want to pass the savings along to you!

## BUSINESS and UTILITIES

NEW **MAILMASTER (Atari diskette only)** — Price: $39.95 Diskette

MAILMASTER is a very versatile software package for managing and manipulating mail lists and mini data bases. Each disk can hold over 600 customer entries containing name, address, 38 letter key words and a phone number. The display is marked so that entries may be made and edited with ease. The status (e.g., disk space left, options, etc.) is shown at all times. Labels may be printed 1,2 or 3 up, and all sorting (zip code and alphabetic) is performed by a fast machine language program.

**PERSONAL FINANCE SYSTEM (Atari and North Star only)** — Price: $39.95 Diskette

PFS is a single diskette, menu-oriented system composed of ten *different* programs. Besides recording your expenses and tax deductible items, PFS will sort and summarize expenses by payee, and display information on expenditures by any of 26 user defined codes by month or by payee. PFS will even produce monthly bar graphs of your expenses by category! This powerful package requires only one disk drive, minimal memory (24K Atari, 32K North Star) and will store up to 600 records per disk (and over 1000 records per disk by making a few simple changes to the programs). You can record checks plus cash expenses so that you can finally see where your money goes and eliminate guesswork and tedious hand calculations. Contains high speed machine language sort. PFS has been demonstrated on network (CBS) TV!

**FAMILY BUDGET (Apple and Atari only)** — Price: $34.95 Diskette

FAMILY BUDGET is a very convenient financial record-keeping program. You will be able to keep track of cash and credit expenditures as well as income on a daily basis. You can record tax deductible items and charitable donations. FAMILY BUDGET also provides a continuous record of all credit transactions. You can make daily cash and charge entries to any of 21 different expense accounts as well as to 5 payroll and tax accounts. Data are easily retrieved giving the user complete control over an otherwise complicated (and unorganized!) subject.

**INTELINK (Atari only)** — Price: $49.95 Diskette

This software package contains a menu-driven collection of programs for facilitating efficient two-way communications through a full duplex modem (required for use). In one mode of operation you may connect to a data service (e.g., The SOURCE or MicroNet) and quickly load data such as stock quotations onto your diskette for later viewing. This greatly reduces "connect time" and thus the service charge. You may also record the complete contents of a communications session. Additionally, programs written in BASIC, FORTRAN, etc. may be built off-line using the support text editor and later "up-loaded" to another computer, making the Atari a *very* smart terminal. Even Atari BASIC programs may be uploaded. Further, a command file may be built off-line and used later as controlling input for a time-share system. That is, you can set up your sequence of time-share commands and programs, and the Atari will transmit them as needed; batch processing. All this adds up to saving both connect time and your time.

NEW **PAYFIVE (Apple II plus diskette, two drives required)** — Price: $149.95

This is an enormously flexible employee payroll system with extraordinarily good human engineering features. PAYFIVE prints checks and compiles the required federal, state and local forms for up to 148 employees. The pay methods may be hourly, salary, commission or any combination. There are multiple options for pay periods, and they also can be used in any combination. PAYFIVE includes *many* other features and comes extremely well documented with a 200 page manual. The manual may be purchased separately for $30, and that payment later applied to the software purchase.

**SHOPPING LIST (Atari only)** — Price: $12.95 Cassette/$16.95 Diskette

SHOPPING LIST stores information on items you purchase at the supermarket. Before going shopping, it will remind you of all the things you might need, and then display (or optionally print) your shopping list and the total cost. Adding, deleting, changing and storing data is very easy. Runs with 16K.

**TAX OPTIMIZER (North Star only)** — Price: $89.95 Diskette

The TAX OPTIMIZER is an easy-to-use, menu oriented software package which provides a convenient means for analyzing various income tax strategies. The program is designed to provide a quick and easy data entry. Income tax is computed by all tax methods (regular, income averaging, maximum and alternate minimum tax). The user may immediately observe the tax effect of critical financial decisions. TAX OPTIMIZER has been thoroughly field tested in CPA offices and comes complete with the current tax tables in its data files. TAX OPTIMIZER is tax deductible!

NEW **UTIL (Apple only, 48K)** — Price: $19.95 Diskette

UTIL is a disk-oriented utility system which permits examining and changing of the contents of DOS 3.2 and 3.3 diskettes at the bit (nibble or byte) level. With UTIL you can easily examine the contents of a diskette sector by sector, restructure the sector pointers, reallocate sectors (e.g. bad sectors may be "hidden"), and perform many other sophisticated operations. For the experienced programmer.

NEW **TURNKEY AND MENU (Atari only)** — Price: $17.95 Diskette

TURNKEY is a utility program which allows you to create autoboot/autorun diskettes easily. Simply load and run TURNKEY, load the program diskette to be modified, and answer the questions! The TURNKEY diskette also comes with DOS 2.0 and includes another program, MENU. MENU lists the contents of your diskette alphabetically, and permits the running of any BASIC program on the diskette by typing a single key. TURNKEY and MENU provide you with the ability to run any program on your diskette by simply turning on the computer and pressing a single key.

NEW **STOCKAID (Atari only)** — Price: $29.95 Diskette

STOCKAID provides a powerful set of tools for stock market analysis. With STOCKAID you can display point and figure charts, as well as bar charts with oscillators. You can also examine long term moving averages and on-balance volume features. STOCKAID allows you to input daily data with a single diskette storage capability of 239 days × 16 stocks. Included are stock dividend and split adjustment capabilities. A very professional package!

NEW **SHAPE MAGICIAN (Apple II, 48K, diskette only)** — Price: $29.95

At last! An utility for painlessly creating graphics shapes for the Apple. Create, edit and save up to 30 shapes which can then be used to develop arcade games or to simply enhance your programs. Add that professional touch!

## EDUCATION

**HODGE PODGE (Apple only, 48K Applesoft or Integer BASIC)** — Price: $14.95 Cassette/$18.95 Diskette

Let HODGE PODGE be your child's teacher. Pressing any key on your Apple will result in a different and intriguing "happening" related to the letter or number of the chosen key. The program's graphics, color and sound are a delight for children from ages 1½ to 7. HODGE PODGE is a non-intimidating teaching device which brings a new dimension to the use of computers in education. See the excellent reviews of this very popular program in INFOWORLD and SOFTALK.

NEW **TEACHERS' AIDE (Atari only)** — Price: $13.95 Cassette/$17.95 Diskette

TEACHERS' AIDE consists of three basic modules contained in one program. The first module provides addition and subtraction exercises of varying levels of difficulty. The second module consists of multiplication problems in which the student may be tested with or without carries and on the subtotal answers in the long hand procedure. Several levels of complexity are provided here as well. The third module consists of division problems; one particularly nice feature of the division module is that the long hand division steps can be displayed along with the remainder in order to clearly demonstrate the procedure by which the remainder is derived. Using TEACHER'S AIDE is not merely a drill, but rather a learning experience.

NEW **PHARMACOLOGY UPDATE (PET only)** — Price: $169.95 Cassette/$169.95 Diskette

This is DYNACOMP's first educational software entry for the medical profession (more are coming!). PHARMACOLOGY UPDATE was written by a R.N. as a masters project, with the aid of a practicing pharmacologist and an electronics instructor. This package comes in two parts. The first part is a 200 page manual which is divided into 11 sections. Each of these sections provides both concise information and probing questions. The second part consists of 11 programs that are keyed to the text and which test the degree of your understanding of the text material. This package has great educational value for the beginning student as well as the professional interested in an efficient way to review and update his or her knowledge. Available on cassettes (11) or diskette.

NEW **TEACHER'S GRADEBOOK (Apple 48K dual/single drive)** — Price $49.95 Diskette

TEACHER'S GRADEBOOK is a *complete* password protected record-keeping system for the classroom. It supports up to nine users, and each user may have data for up to nine classes on one disk (with up to 90 students per class). Typical information which can be entered, edited and processed includes rosters, absences and grades. Summary reports may be displayed (on the screen) or printed in various ways, with automatic weighted averaging and conversion to letter grades. This system has been tested ("goof-proofed") in the class environment and is both well-written and well-documented.

## ORDERING INFORMATION

All orders are processed and shipped within 48 hours. Please enclose payment with order and include the appropriate computer information. If paying by VISA or Master Card, include all numbers on card. Purchase orders accepted.

**Shipping and Handling Charges**
Within North America: Add $2.00
Outside North America: Add 15% (Air Mail)

**Delivery**
All orders (excluding books) are sent First Class.

**Quantity Discounts**
Deduct 10% when ordering 3 or more programs. Dealer discount schedules are available upon request.

**8" CP/M Disks**
Add $2.50 to the listed diskette price for each 8" floppy disk (IBM soft sectored CP/M format). Programs run under Microsoft MBASIC or BASIC-80.

**5¼" CP/M Disks**
All software available on 8" CP/M disks is also available on 5¼" disks, North Star and Osborne format.

Ask for **DYNACOMP** programs at your local software dealer. Write for detailed descriptions of these and other programs from **DYNACOMP**.

**DYNACOMP, Inc. (Dept. C)**
1427 Monroe Avenue

## STATISTICS and ENGINEERING

**DIGITAL FILTER (Available for all computers)** — Price: $39.95 Cassette/$43.95 Diskette

DIGITAL FILTER is a comprehensive data processing program which permits the user to design his own filter function or choose from a menu of filter forms. In the explicit design mode the shape of the frequency transfer function is specified by directly entering points along the desired filter curve. In the menu mode, ideal low pass, high pass and bandpass filters may be approximated to varying degrees according to the number of points used in the calculation. These filters may optionally also be smoothed with a Hanning function. In addition, multi-stage Butterworth filters may be selected. Features of DIGITAL FILTER include plotting of the data before and after filtering, as well as display of the chosen filter functions. Also included are convenient data storage, retrieval and editing procedures.

**DATA SMOOTHER (Not available for Atari)** — Price: $19.95 Cassette/$23.95 Diskette

This special data smoothing program may be used to rapidly derive useful information from noisy business and engineering data which are equally spaced. The software features choice in degree and range of fit, as well as smoothed first and second derivative calculation. Also included is automatic plotting of the input data and smoothed results.

**FOURIER ANALYZER (Available for all computers)** — Price: $19.95 Cassette/$23.95 Diskette

Use this program to examine the frequency spectra of limited duration signals. The program features automatic scaling and plotting of the input data and results. Practical applications include the analysis of complicated patterns in such fields as electronics, communications and business.

**TFA (Transfer Function Analyzer)** — Price: $19.95 Cassette/$23.95 Diskette

This is a special software package which may be used to evaluate the transfer functions of systems such as hi-fi amplifiers and filters by examining their response to pulsed inputs. TFA is a major modification of FOURIER ANALYZER and contains an engineering-oriented decibel versus log-frequency plot as well as data editing features. Whereas FOURIER ANALYZER is designed for educational and scientific use, TFA is an engineering tool. Available for all computers.

**HARMONIC ANALYZER (Available for all computers)** — Price: $34.95 Cassette/$38.95 Diskette

HARMONIC ANALYZER was designed for the spectrum analysis of repetitive waveforms. Features include data file generation, editing and storage/retrieval as well as data and spectrum plotting. One particularly unique facility is that the input data need not be equally spaced or in order. The original data is sorted and a cubic spline interpolation is used to create the data file required by the FFT algorithm.

FOURIER ANALYZER, TFA and HARMONIC ANALYZER may be purchased together for a combined price of $51.95 (three cassettes) and $63.95 (three diskettes).

**REGRESSION I (Available for all computers)** — Price: $19.95 Cassette/$23.95 Diskette

REGRESSION I is a unique and exceptionally versatile one-dimensional least squares "polynomial" curve fitting program. Features include very high accuracy; an automatic degree determination option; an extensive internal library of fitting functions; data editing; automatic data, curve and residual plotting; a statistical analysis (eg. standard deviation, correlation coefficient, etc.) and much more. In addition, new fits may be tried without reentering the data. REGRESSION I is certainly the cornerstone program in any data analysis software library.

**REGRESSION II (PARAFIT) (Available for all computers)** — Price: $19.95 Cassette/$23.95 Diskette

PARAFIT is designed to handle those cases in which the parameters are imbedded (possibly nonlinearly) in the fitting function. The user simply inserts the functional form, including the parameters (A(1), A(2), etc.) as one or more BASIC statement lines. Data, results and residuals may be manipulated and plotted as with REGRESSION I. Use REGRESSION I for polynomial fitting, and PARAFIT for those complicated functions.

**MULTILINEAR REGRESSION (MLR) (Available for all computers)** — Price: $34.95 Cassette/$38.95 Diskette

MLR is a professional software package for analyzing data sets containing two or more linearly independent variables. Besides performing the basic regression calculation, this program also provides easy to use data entry, storage, retrieval and editing functions. In addition, the user may interrogate the solution by supplying values for the independent variables. The number of variables and data size is limited only by the available memory.

REGRESSION I, II and MULTILINEAR REGRESSION may be purchased together for $51.95 (three cassettes) or $63.95 (three diskettes).

**ANOVA (Not available on Atari cassette or for PET/CBM)** — Price: $39.95 Cassette/$43.95 Diskette

In the past the ANOVA (analysis of variance) procedure has been limited to the large mainframe computers. Now DYNACOMP has brought the power of this method to small systems. For those conversant with ANOVA, the DYNACOMP software package includes the 1-way, 2-way and N-way procedures. Also provided are the Yates $2^K$ factorial designs. For those unfamiliar with ANOVA, do not worry. The accompanying documentation was written in a tutorial fashion (by a professor in the subject) and serves as an excellent introduction to the subject. Accompanying ANOVA is a support program for building the data base. Included are several convenient features including data editing, deleting and appending.

**BASIC SCIENTIFIC SUBROUTINES, Volumes 1 and 2 (Not available for Atari)**

DYNACOMP is the exclusive distributor for the software keyed to the popular texts *BASIC SCIENTIFIC SUBROUTINES, Volumes 1 and 2* by F. Ruckdeschel (see advertisements in BYTE magazine). These subroutines have been assembled according to chapter. Included with each collection is a menu program which selects and demonstrates each subroutine.

**Volume 1**
Collection #1: Chapters 2 and 3 - Data and function plotting; complex variables and functions.
Collection #2: Chapter 4 - Extended matrix and vector operations.
Collection #3: Chapters 5 and 6 - Random number generators (Poisson, Gaussian, etc.); series approximations.
Price per collection: $14.95 Cassette/$18.95 Diskette
All three collections are available for $39.95 (three cassettes) and $49.95 (three diskettes).

**Volume 2**
Collection #1: Chapter 1 - Linear, polynomial, multidimensional, parametric least squares.
Collection #2: Chapter 2 - Series approximation techniques (economization, inversion, reversion, shifting, etc.).
Collection #3: Chapter 3 - Functional approximations by iteration and recursion.
Collection #4: Chapter 4 - CORDIC approximations to trigonometric, hyperbolic, exponential and logarithmic functions.
Collection #5: Chapter 5 - Table interpolation, differentiation and integration (Newton, LaGrange, splines).
Collection #6: Chapter 6 - Methods for finding the real roots of functions.
Collection #7: Chapter 7 - Methods for finding the complex roots of functions.
Collection #8: Chapter 8 - Optimization by steepest descent.
Price per collection: $14.95 Cassette/$18.95 Diskette
All eight collections are available for $99.95 (eight cassettes) and $129.95 (eight diskettes).
Because the texts are a vital part of the documentation, *BASIC SCIENTIFIC SUBROUTINES, Volumes 1 and 2* are available from DYNACOMP:

BASIC SCIENTIFIC SUBROUTINES, Vol 1 (319 pages): $19.95 + 75¢ postage
BASIC SCIENTIFIC SUBROUTINES, Vol 2 (790 pages): $23.95 + $1.50 postage

See reviews in KILOBAUD and Dr. Dobbs.

NEW **SOFTNET (Apple II, 48K, diskette only)** — Price $129.95

SOFTNET may be used to create models of liquid pipeline systems to evaluate their flow performance. Up to 150 nodes with up to 150 connecting elements may be simulated, and models may be combined to form yet larger models. If you are involved in water distribution systems, chemical fluid flow problems, building plumbing, or similar situations, this is an ideal analysis tool.

NEW **MATCHNET (TRS-80 only)** — Price: $19.95 Cassette/$23.95 Diskette

It often takes days to iteratively optimize an L, Pi or T matching network for a particular application. Take a few minutes with MATCHNET and you will have the Q, frequency response and reflection coefficients for any of twelve matching networks. You input the source and load impedance and MATCHNET calculates the R, C, (and L) values and plots (and/or prints) the frequency response and reflection coefficients for each configuration. The reviewer of this program remembers when he use to do this by hand and loves MATCHNET!

NEW **ACTIVE CIRCUIT ANALYSIS (ACAP) (48K Apple only)** — Price: $25.95 Cassette/$29.95 Diskette

With ACAP you may analyze the response of an active or passive component circuit. The circuit may be probed at equal steps in frequency, and the resulting complex voltages at each component juncture examined; the frequency response of a filter or amplifier may be completely determined with respect to both amplitude and phase. In addition, ACAP prints a statistical analysis of the range of voltage responses which result from tolerance variations in the components. ACAP is easy to learn and use. Circuit descriptions may be saved onto cassette or diskette to be recalled at a later time for execution or editing. ACAP should be part of every circuit designer's program library.

NEW **LOGIC SIMULATOR (Apple only; 48K RAM)** — Price: $34.95 Cassette/$38.95 Diskette

Test your complicated digital logic design with respect to given set of inputs to determine how well the circuit will operate. The elements which may be simulated include multiple input AND, OR, NOR, EXOR, EXNOR and NAND gates, as well as inverters, J-K and D flip-flops, and one-shots. Inputs may be clocked in with varying clock cycle lengths/displacements and delays may be introduced to probe for glitches and race conditions. A timing diagram for any given set of nodes may be plotted using HIRES graphics. Save your breadboarding until the circuit is checked by LOGIC SIMULATOR.

NEW **NUMBERKRUNCHER (TRS-80 only)** — Price: $69.95 Cassette/$73.95 Diskette

This program is the most complete numerical analysis system available for the TRS-80. It can handle up to 255 data sets, each set having a six character name. It includes complete data editing facilities and convenient data input/output capability. The analyses available are multiple linear regression and correlation determination of residuals, data transformations and extensive graphics generation, including axis naming, and more. The supporting documentation is extremely well written and well organized, and includes appendices which describe the numerical procedures used in the program.

NEW **STATSORT (TRS-80 only)** — Price: $39.95 Cassette/$43.95 Diskette

STATSORT consists of several menu selected programs which allow the user to create (build, edit, merge), format and print files, (machine) sort them on any field, and numerically analyze (maximum, minimum, average, variance, standard deviation) tabulated data. STATSORT is well documented and easy to use. The cassette version can also be employed to create a data type which can be read by the Radio Shack Advanced Statistical Package.

NEW **STATTEST (TRS-80 only)** — Price: $19.95 Cassette/$23.95 Diskette

This is a statistical inference package which helps you make wise decisions in the face of uncertainty. In an interactive fashion you can build and edit data files and test the differences in means, variances and proportions. STATTEST will also perform data analysis as well as do linear correlation and regression. This menu-directed statistical workhorse is rounded out with a chi-square contingency test and a (uniform and normal) random sample generator. The documentation is written by a college professor who guides you through the various tests.

## ABOUT DYNACOMP

DYNACOMP is a leading distributor of small system software with sales spanning the world (currently in excess of 50 countries). During the past three years we have greatly enlarged the DYNACOMP product line, but have maintained and improved our high level of quality and customer support. The achievement in quality is apparent from our many repeat customers and the software reviews in such publications as COMPUTRONICS, 80 Software Critique, A.N.A.L.O.G., Softalk, Creative Computing and Kilobaud. DYNACOMP software has also been chosen for demonstration on network television. Our customer support is as close as your phone. It is always friendly. The staff is highly trained and always willing to discuss products or give advice.

# Underlining for Apple Writer

John E. Stith

Apple Writer is a versatile, general-purpose text processor for the Apple II. With the addition of on-screen, lower-case display, (see "Lower-Case Display for *Apple Writer*," *Creative Computing*, Feb. 1981), it offers most of the features required for rapid, convenient text manipulation. The one feature I most wanted, and had not yet found in *Apple Writer*, was underlining.

This article describes the program I wrote to add the underlining capability to *Apple Writer* and to fix an existing right-justification error which I noticed while testing the program. The two modifications are independent, so you can make one or both changes.

**Approach**

Underlining is admittedly a low-priority feature when compared to abilities such as margin justification. The fact that this was my highest-priority addition is an indication of the completeness of *Apple Writer*. Underlining in typewritten documents is useful for emphasis. The main requirement for underlining in typescripts is to tell the typesetter to use italics, *like this*.

The method required for underlining on a printer varies by type of printer. The main limitation of this program is that it is tailored to the Epson MX-80 printer. The program is still useful for other printers because it provides the entry points and information required for someone else to tailor that small portion of the program without having to pry into the *Apple Writer* program. (Apple Computer, Inc. does not provide the source code.)

***The main requirement for underlining in typescripts is to tell the typesetter to use italics.***

There are two obvious ways to command a printer to underline. First, every character to be underlined can be followed with a backspace and an underline character.

Second, at the end of a normal line, the computer can send a carriage return, suppress the line feed, and send another line consisting solely of blanks and underlines. *Neither* of these alternatives works with the Apple MX-80 controller. The first method doesn't work because the printer can't respond to backspaces. The second doesn't work because the controller always performs a linefeed after a carriage return.

Fortunately, there are two less-obvious ways to tell the MX-80 to underline. First, the computer can send a regular line followed by as many blanks as it takes to fill the MX-80 print buffer (nominally 80). The printer then performs an *automatic* carriage return *without* linefeed and is ready to print the underline buffer which follows. (Switch 1-3 in the MX-80 must be on for this to happen—that is the factory default setting.)

The second way is to manipulate the distance a linefeed moves the paper. By setting the linefeed distance to 1/72", a second line of underlines can be printed very close to the original line. Moving the next line feed 11/72" and then restoring the default of 1/6" resumes normal operation.

I chose the first approach (buffer overflow) because the linefeed adjustments effectively change the top-of-form position. (The MX-80 counts carriage returns, not distance.)

John E. Stith, P.O. Box 7463, Colorado Springs, CO 80933.

```
This is a sample of text, as it would ap
pear while using the Apple Writer text e
ditor, with one <underlined> word.  <Thi
s second sentence is all underlined.>
```

*Figure 1. Example of underline control characters while editing.*

```
This is a sample of text, as it would appear while using the
Apple Writer text formatter, with one underlined word.  This
second sentence is all underlined.
```

*Figure 2. Example of underline printout after formatting.*

## The underlining capability is implemented by adding characters to the text.

**Implementation**

The underlining capability is implemented by adding characters to the text. Two characters control the current underlining status: the less-than character and the greater-than character. You can modify the characters used, but you should pick ones you seldom use. The less-than character turns on underlining; the greater-than character turns it off.

When underlining is active, all non-blank characters in the body of the text are underlined. Characters in the page header will not be underlined.

Figures 1 and 2 show before and after examples of how the characters are used.

An offshoot of these modifications may be useful to people who need to send embedded control characters to their printers. In the lower-case version described in my February 1981 article, and in this new version, control characters (e.g. Escape) found in the text buffer will be sent correctly.

Getting these characters into the buffer requires some effort, however. One way is first to prepare a small, canned message with the editor. Then go into the Apple monitor and use it to modify locations in the text buffer to be the desired control characters (with the most significant bits set on). Finally, use the editor to save that message to disk. Then, at any time, do a control-I insert of the canned message into a larger text file.

**Modifications**

Figure 3, Source Program for Modifications, shows the program which performs the underlining and corrects the right-justification error. All the changes are applied to the *Apple Writer* PRINTER program. Figure 3 is divided into two general areas: changes and additions.

All lines between the DSECT and DEND lines are changes to existing code. The remainder of the program is a series of subroutines which are called as appropriate. All of the additions fit between addresses $139D and $1544. This area is normally used for an undocumented capability of using the built-in game interface for the printer communications. I don't know whether it works or not, but since most people don't know about it, the feature probably isn't widely used. (That section of the program was enabled by typing "SERIAL" in response to the initial prompt.)

The subroutine PATCH corrects the right-justification error which causes partial and full lines not to match up evenly. The reason they don't is that the original program counts the trailing carriage return as a character for which to leave space. PATCH also corrects a second problem which is annoying for owners of low-speed printers; blank lines in the center and right-justified modes cause half or full lines of blanks, respectively, to be printed. Adding this subroutine and its corresponding JMP corrects the error.

The underline changes which follow all depend on having the lower-case modifications performed. The error correction above is independent of the lower-case modifications and the underline modifications.

ULINIT establishes initial values for critical parameters.

ULMOVE intercepts each character moved to the PRINTER output buffer. If a character is to be underlined, ULMOVE turns off the characters most significant bit (MSB)of the character. ULMOVE also removes the underline start and stop characters from the output buffer so they are not printed.

ULPRCR is executed just after a print line has been transmitted, but before the carriage return has been sent. It sends enough blanks to fill the print buffer of the MX-80 and therefore causes an automatic print without linefeed. Then it transmits the underline buffer, a buffer loaded with blanks and underline characters as appropriate. ULPRCR is the subroutine which must be tailored for other printers.

*Figure 3. Source Program for Modification.*

**SOFTWARE**

**FOR YOUR 16K TRS-80 COLOR, MODEL I, III ATARI 400/800, APPLE II**

**NOW YOUR COMPUTER CAN ACT LIKE A COMPUTER SHOULD!!! WITH OUR MAGNETIC MAGAZINES, YOUR MICRO WILL ENTERTAIN, EDUCATE, AND CHALLENGE YOU.**

appletree™

MAGATARI™

TRC™

On cassette or diskette*, you will receive 6-10 programs every month ranging from games, home entertainment, and personal finance, to more of our unique "teaching" programs.
Our next issue will include:

1. **ALIEN INVASION with Graphics**
2. **Pharoah's Curse (Adventure)**
3. **Itemized Deductions (Schedule A)**
4. **Sine, Cosine, Tangent with Graphics**

Plus two of our teaching programs:

5. **Using Strings**
6. **Utility of the Month (I)**

You've already missed Stock Market Analysis, Concentration, Checkers, Golf, Algebra and Geometry Tests and Football. ☆ Later issues will include Backgammon, Chess, all Tax Schedules, Baseball, and many more. So don't let another issue pass you by! Subscription price for cassette is $50 per year, $30 per ½ year and $10 for a trial issue; for diskette $62 per year, $36 per ½ year, and $11 for a trial issue.
☆(Back issues available on request)

**THE COLOR ACCOUNTANT**

**With our complete home accounting system, keeping track of your finances can be as easy as PI.**

1. **Chart of Accounts Maintenance**
2. **Complete Checkbook Maintenance**
3. **Tax Deduction Flags**
4. **Net Worth Statement**
5. **Income Less Expense Statement**
6. **Complete Graph Package (graphs any files)**
7. **Payments and Appointments Calendar**
8. **Home Budget Analysis**
9. **Mailing List**
10. **Schedule 1040 (Long Form)**

All programs are menu-driven and allow add/change/delete. Also, all files and statements can be listed to screen or printer, and saved to cassette or diskette. The cost of THE COLOR ACCOUNTANT is $75 for cassette and $80 for diskette. This package requires 16K except for the ATARI 400/800 which requires 24K for cassette and 32K for diskette. THE COLOR ACCOUNTANT also comes with 40 pages of documentation.

**the programmer's program**

Do you know all the innovative ways of using BASIC commands? The staff at the Programmer's Institute have designed a set of programs explaining everything the manuals omit.
The Programmer's Program leads you step by step through the fundamentals of programming your computer. Then you explore the finer points...**multiple loops, queues, stacks, game programming, sorts, trees, boolean logic, and memory savers.** All these methods make your programming tasks easier and more efficient. Difficult (and very useful) programs are created before your eyes, and designed so you learn at your own speed! **The Programmer's Program is a must for every owner of a microcomputer. ($50 cassette, $55 diskette).**

**Order both The Programmer's Program and 1 year's subscription, and the total cost is only $75 cassette, $87 diskette. If you order now, you will receive a Football Program and Computerized Telephone Directory ABSOLUTELY FREE with any $75 order. So don't wait . . . order today!**

**BOOKS and SOFTWARE**

**For ATARI – PET – OSI – APPLE II – 6502**

**ATARI BASIC – Learning by Using**
This new book is an "Action"-Book. You do more than read it. Learn the intricacy of ATARI-BASIC thorugh the short programs which are provided. The suggestions challenge you to change and write program routines. Yes, it's exciting –
Many of the programs are appropriate for beginners as well as experienced computer users. (Screen Drawings, Special Sounds, Keys, Paddles + Joysticks. Specialized Screen Routines, Graphics and Sound. Peeks and Pokes and special stuff ).
**Order-No. 164** **$9.95**

**Games for the ATARI-Computer**
How to program your own games on the ATARI. Complete listings in BASIC and Machine Language of exciting games. Tricks and hints.
**Order-No. 162** **$4.95**

**ATMONA-1**
Machine Language Monitor for the ATARI 400/800.
This powerful monitor provides you with the firmware support that you need to get the most out of your powerful system. ATMONA-1 comes on a bootable cassette. No cartridges required. Disassemble, Memory Dump HEX + ASCII, (Change Memory Locations, Blocktransfer, fill memory block, save and load machine language programs, start mach. Lang. Progr. (Printer optional).
Comes with introductionary article on how to program the ATARI computer in machine language. (Available also in ROM)
**Order-No. 7022** **$19.95**

**ATMONA-2 Superstepper**
A very powerful Tracer to explore the ATARI ROM/RAM area. Stop at previously selected address. Opcode or operand (cassette).
**Order-No. 7049** **$49.95**

**EDITOR/ASSEMBLER for ATARI 800, 32K RAM**
Extremely fast and powerful Editor/Assembler. (8K Source-code in about 5 seconds) Includes ATMONA-1.
**Order-No. 7098** **$49.95**

**MACRO-Assembler**
for ATARI 800, 48K RAM
Please specify your system: RAM, disc or cassette.
**Order-No. 7099** **$89.00**

**Gunfight** – For ATARI 400/800 16K RAM, needs two joysticks, animation and sound. (8K machine language).
**Order-No. 7207** **$19.95**

**EPROM BURNER** for ATARI 400/800. Bare boards only with description, schematic + software (2716, 2732).
**Order-No. 7041** **$99.00**

**Invoice Writing** for very small business with ATARI 400/800 16K RAM.
**Order-No. 7022, cass.** **$29.85**
**Order-No. 7200, disc.** **$39.99**

**Wordprocessor for ATARI 800, 48K RAM**
**Order-No. 7210** **$29.95**

**How to connect your EPSON-Printer to the ATARI 400/800.**
Construction article with printed circuit board and software. (Screenprint and variable characters per line).
**Order-No. 7210** **$19.95**

**OSI OSI OSI OSI OSI**

**The First Book of Ohio Scientific**
Introduction to OSI computers. Diagrams, hardware and software information not previously available in one compact source. 192 pages.
**Order-No. 157** **$7.95**

**The Second Book of Ohio Scientific**
Very valuable information about OSI microcomputer systems. Introduction to OS-65 D and OS-65U networking. Hardware and software hints and tips. Systems specifications. Business applications.
**Order-No. 158** **$7.95**

**The Third Book of Ohio Scientific** is now available!
Very important information for the OSI system experimenter. Interface techniques, system expansions, accessories and much more (EPROM-Burner, 6522 I/O-card with 1K RAM, Soundboard, EPROM/RAM board).
**Order-No. 159** **$7.95**

**The Fourth Book of OHIO**
VIP-Book – Very Important Programs. Many Interesting programs for OSI computers. Sorting (Binary Tree). Differential Equitation, Statistics, Astrology, Gas Consumption, Games a. s. o.
**Order-No. 160** **$9.95**

**VIP Package** – Above book plus a cassette with the programs.
**Order-No. 160 A** **$19.95**

**The Fifth book of Ohio Scientific**
Many exciting programs programming hints and tricks, Textwriter, Debugger for C1P, Games, Utilities and much more (polled keyboard)
**Order-No. 161** **$7.95**

**Invoice Writing Program** for OSI-C1PMF, C4P. Disk and Cassette, 8K RAM.
**Order-No. 8234** **$29.80**

**Mailing List** for C1PMF or C4PMF 24K RAM
250 addresses incl. phone number and parameters on one 5 1/4 disk)
**Order-No. 8240** **$29.80**

**8K Microsoft BASIC Reference Manual**
Authoritative reference for the original Microsoft 4K + 8K BASIC developed for ALTAIR and later computers including OSI, PET, TRS-80 and VIC.
**Order-No. 141** **$9.95**

**Expansion Handbook for 6502 and 6802**
S-44 Card Manual describes all of the 4.5 x 6.5 44-pin S-44 cards incl. schematics. A MUST for every 6502 system user (KIM, SYM, AIM, VIC, PET, OSI)
**Order-No. 152** **$9.95**

**Microcomputer Application Notes**
Reprint of Intel's most important application notes including 2708, 8085, 8255, 6251 chips. Very necessary for the hardware buff.
**Order-No. 153** **$9.95**

**Complex Sound Generation**
New revised applications manual for the Texas Instruments SN 76477 Complex Sound Generator.
**Order-No. 154** **$6.95**

**Small Business Programs**
Complete listings for the business user. Inventory, Invoice Writing, Mailing List and much more. Introduction to Business Applications.
**Order-No. 156** **$14.90**

**Microcomputer Hardware Handbook**
Descritions, pinouts and specifications of the most popular microprocessor and support chips. A MUST for the hardware buff.
**Order-No. 29** **$14.95**

**Care and Feeding of the Commodore PET**
Eight chapters exploring PET hardware. Includes repair and interfacing information. Programming tricks and schematics.
**Order-No. 150** **$9.95**

**Prototype-Expansion Board for VIC-20 (S-44-Bus).**
**Order-No. 4844** **$18.95**

**16K RAM/ROM board for S44-bus.** Any combination of RAM and ROM on one board. (SY2128 or 2716)
**Order-NO. 613** **$39.95**

**Low cost expansion boards for your APPLE II.** Bare board comes with extensive description and software.
**Prototyping card**
**Order-No. 604** **$29.00**
**6522 VIA–I/O Exp.**
**Order-No. 605** **$39.00**
**2716 EPROM-Burner**
**Order-No. 607** **$49,00**
**8K EPROM/RAM Card**
**Order-No. 609** **$29.00**

CIRCLE 119 ON READER SERVICE CARD

## Modification Checklist

1. Perform all modifications to the Apple Writer TEDITOR and PRINTER programs, as described in "Lower-Case Display for *Apple Writer*," Figure 5, Modification Checklist. (The changes require a lower-case adapter, such as the Paymar adapter.)
2. Save a copy of the lower-case version of PRINTER.
3. Perform the following steps on a *copy* of the lower-case version of PRINTER.
4. Reboot the system from the working disk copy. (*Apple Writer* runs under DOS 3.2 and DOS 3.3.)
5. In response to the editor menu prompt, type:
   Q
6. Type
   BLOAD PRINTER
7. After PRINTER is loaded, enter the Apple monitor by typing:
   CALL -151
8. Use the monitor to enter all instructions and data shown in Figure 3. To do this, make sure that for every line in the figure having one, two, or three bytes specified between the address on the far left and the source program line number ten columns to the right, you enter that byte at the correct address. Do this step *very* carefully. If you make any errors that are uncorrectable, start over at step 4.
9. To go back to Basic, type:
   3D0G
10. To save the new version to disk, type:
    BSAVE PRINTER, A$803, L$10FB
11. To protect your efforts, type:
    LOCK PRINTER
12. Your working copy is now complete. To try it out, reboot the system using the new copy. Create a text file that includes the start-underlining character and the stop-underlining character (as in Figure 1).
13. Now print the text. Your MX-80 should print underlined words (as in Figure 2).
14. Once you are satisified that your new version is working properly, copy it to a backup disk, using the same procedure as in the Apple Writer manual. Just remember that the "L" field on the BSAVE commands for TEDITOR and PRINTER is now $410FB rather than $1040.

ULBLNK inserts blanks, as required, into the underline buffer. ULBLNK is needed because not all blanks to be printed are sent from the same routine in PRINTER. When the left margin (!1m command) is not zero or when centering or right justification are commanded, blanks are sent from two other routines in PRINTER.

ULPRNT inserts blanks and underline characters into the underline buffer as individual print-line characters are transmitted to the printer.

ULNEXT is an internal subroutine which increments the column number for the next blank or underline character. It also prevents buffer overflow.

The data section includes several user-changeable parameters and the underline buffer. ULSTRT and ULDONE may be replaced with any ASCII printable characters. ULCLMX tells the current print-line length for the MX-80 so the software knows how many blanks to send to cause a print on buffer overflow. This is *not* the difference between the left and right margins.

### Limitations

The changes described in this article have a few limitations. First, except for the right-justification correction, the changes described will work only with a copy of the *Apple Writer* Version 1.0 PRINTER program which has been modified for on-screen, lower-case display, per my earlier article. This is because the modified version uses true ASCII.

Second, these changes eliminate the undocumented "SERIAL" option. Third, these changes are tailored for the Epson MX-80 printer and probably won't work with any other printer. The following paragraphs give ground rules for adapting the changes for other printers.

### Tailoring for Other Printers

Should you want to use underlining with other printers, almost all of the changes here will be directly applicable. The subroutine ULPRCR will probably be the only one requiring modification. Following is a description of the conditions the new ULPRCR must meet.

Upon entry, ULLINE will be non-zero if any underlines are necessary for the current line. ULCOLM will equal the number of characters sent in the regular line, minus one. ULBUFF will contain ASCII blanks and underline characters in the correct order for the line most recently transmitted.

If your printer will accept backspaces, you can backspace to the start of the line and then print ULBUFF. If your printer can be sent a command to inhibit line feed carriage return, you can do so, send the carriage return, send ULBUFF, and then command the printer back into automatic-linefeed mode. The new ULPRCR must save the Y register and execute the code at ULPRDN when it is finished.

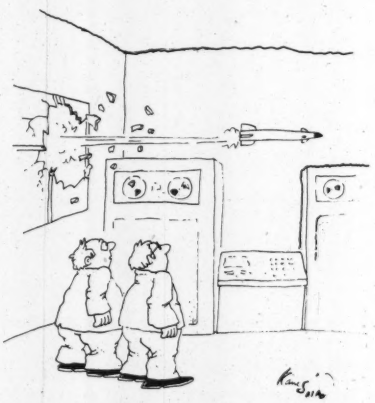
If your printer *always* performs a linefeed following a carriage return and provides no alternatives for backspacing or short line feeds, you probably won't be able to do underlining at all—at least it won't be any more convenient than using a pen, or lining up dashes in the next row.

### Installation

Figure 4, Modification Checklist, provides a list of steps necessary when performing the modifications. *Do not* make any changes to your original disks. Make the changes only on copies.

### Summary

If you follow the steps in Figure 4, you will have a composite, lower-case display, underlining *Apple Writer*. Your right-hand margins will also be correctly justified. □



*"Lately, we've been having a lot of trouble with the computer guidance system."*

# Preview for Apple Writer

**John E. Stith**

When the *Apple Writer* text processor program was introduced, it lacked a few features which make general purpose text handling even easier. I described the addition of on-screen, lower-case display in my article "Lower-Case Display for Apple Writer" in the February 1981 issue of *Creative Computing*, and an article on adding the underlining capability, is found on page 146 of this issue.

This article describes the addition of one more function: variable-speed, on-screen preview. The program described here allows you to modify your *Apple Writer* to view the formatted text on the monitor screen, without having to print it. The only catch is that you must incorporate the modifications outlined in the other articles.

**Approach**

It is easy to perform an on-screen preview with *Apple Writer*. By changing the PRINTER constant menu item J, printer address, to $FDF0 instead of your regular printer address, all text will be directed only to the monitor screen. The problem, however, is that the text will be written quite fast, making it nearly impossible to read.

The approach I chose was to modify the section of *Apple Writer* PRINTER that checks to see if the operator typed an ESCAPE, (and therefore wanted to terminate printing.) Slowing down the display gives the operator time to read the text.

**Implementation**

The preview mode is controlled by characters typed at the keyboard, as shown in Figure 1, Variable-Speed Scroll Commands. ESCAPE works as normal; it terminates printing. Typing a "P" pauses the printing process until a different character is typed. Typing a "V" causes

John E. Stith, P.O. Box 7463, Colorado Springs, CO 80933.

*Figure 1. Variable Speed Preview Commands.*

| Key | Function |
|---|---|
| Escape | Terminate Printing |
| P | Pause |
| V | Variable-Speed Scroll (Speed Set Via Paddle Zero.) |
| Any Other | Continue Printing At Full Speed |

NOTE: Setting the PRINTER CONSTANT J (Printer Address) to $FDF0 will cause output to be directed only to the monitor.

*Figure 2. Source Program for Modifications.*

*Figure 3. Modification Checklist.*

1. Perform all modifications to the *Apple Writer* TEDITOR and PRINTER programs as described in Reference 1, Figure 5, Modification Checklist, and Reference 2, Figure 4, Modification Checklist. (The changes described require a lower-case adapter, such as the Paymar adapter.)
2. Save a copy of the underlining version of PRINTER.
3. Perform the following steps on a *copy* of the underlining version of PRINTER.
4. Reboot the system from the working disk copy. (*Apple Writer* runs under DOS 3.2 and DOS 3.3.)
5. In response to the editor menu prompt, type:
   Q
6. Type
   BLOAD PRINTER
7. After PRINTER is loaded, enter the Apple monitor by typing:
   CALL -151
8. Use the monitor to enter all instructions and data shown in Figure 2. To do this, make sure that for every line in the figure having one, two, or three bytes specified between the address on the far left and the source program line number ten columns to the right, you enter that byte as the correct address. (An example of how to do this is in Figure 5 of Reference 1.) Do this step *very* carefully. If you make any errors that are uncorrectable, start over at step 4.
9. To go back to Basic, type:
   3D0G
10. To save the new version to disk, type:
    BSAVE PRINTER, A$803, L$10FB
11. To protect your efforts, type:
    LOCK PRINTER
12. Once you are satisfied that your new version is working properly, copy it to a backup disk, using the same procedure as in the *Apple Writer* manual. Just remember that the "L" field on the BSAVE commands for TEDITOR and PRINTER is now $10FB rather than $1040.

the program to enter the variable-speed scroll mode. Game paddle zero controls a pause between lines of from zero to approximately five seconds.

Typing any other character will cause the output to resume at full speed. You can go directly from any mode to any other.

Setting the PRINTER constants menu item J, printer address, to $FDF0 will disable output to your printer.

**Modifications**

Figure 2, Source Program for Modifications, shows the program which performs the variable-speed preview. All the changes are applied to the *Apple Writer* PRINTER program. The speed range can be changed by altering the value of "DELAY."

**Installation**

Figure 3, Modification Checklist, provides a list of steps necessary when performing the modifications. *Do not* make any changes to your original disks. Make the changes only on copies.

**Summary**

By following the steps in Figure 3, you will have a composite, lower-case display, underlining, previewing *Apple Writer*. □

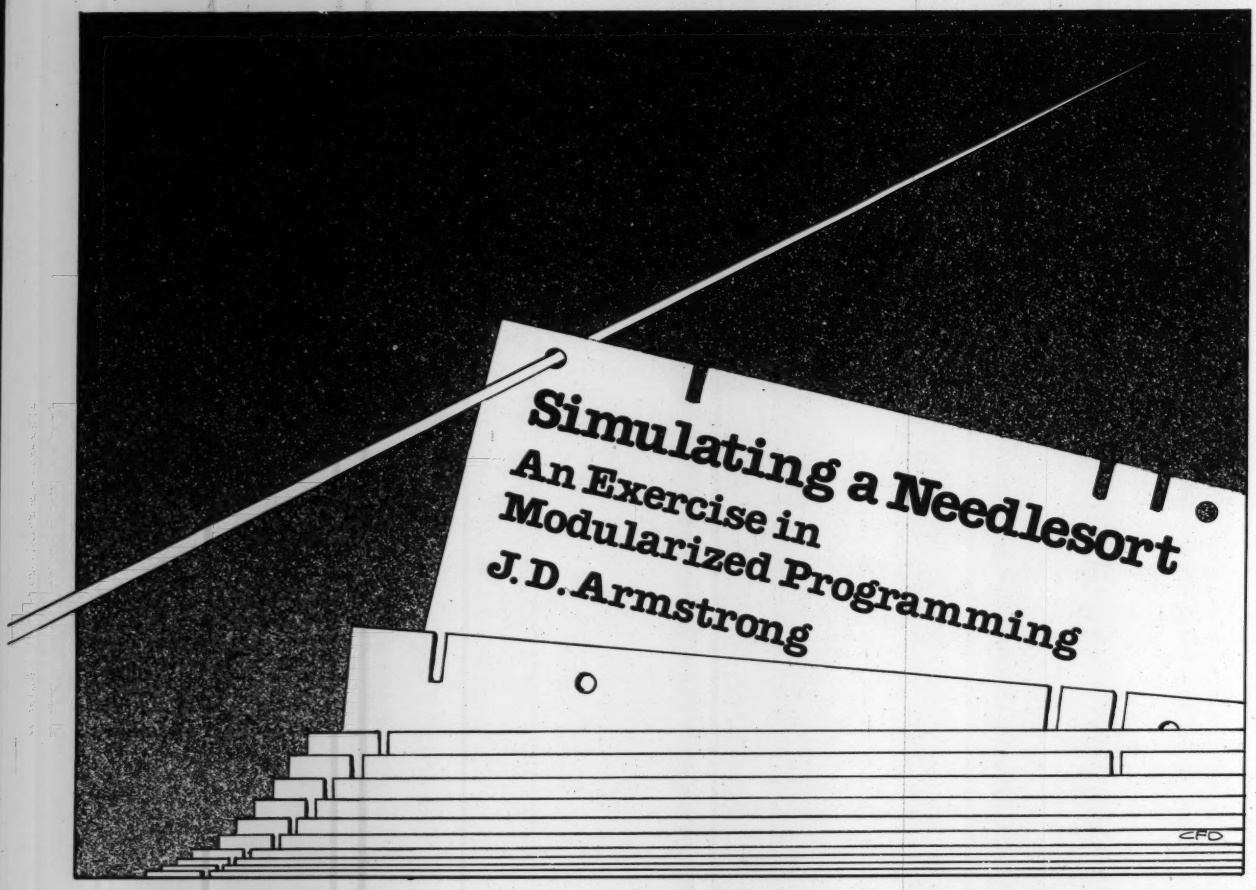
CIRCLE 113 ON READER SERVICE CARD



TESTSRCH was written to test feasibility of a needlesort algorithm. It is also an exercise in modularized programming (a form of structured programming) in Basic. Although written in NorthStar Basic, it can be converted to other Basics.

**The Needlesort/Search System**

The needlesort system usually uses a large file of cards, each of which has a series of holes prepunched around its perimeter. Each hole has a particular significance in a prearranged code. A notching tool is used to cut a hole to the edge of the card, and a needlelike sorting device is inserted into the stack of cards at the hole location desired and then lifted so that the notched cards drop out.

Several sorters can be inserted at the same time on the same edge for a multi-hole sort. On the other hand, not inserting a sorter needle into a particular hole simply means "don't care" and the card will drop at sort time. This is equivalent to skipping that field when using a computer.

Printed or written data is usually placed on the card to further identify or describe the subject. This system once enjoyed wide use in library and personnel files, and much has been written about the system and the coding techniques used to enhance selections.

J.D. Armstrong, 8035 E. Cole St., Downey, CA 90242.

***One of the goals of structured programming is the elimination of the GOTO statement.***

An example of an application to which a needlesort system might be applicable is the selection of real estate listings based on computer preferences. Coding of the holes could contain information such as: number of bedrooms, number of baths, number of garages, swimming pool, patio, corner lot, forced air heat, air conditioning, carpets, draperies, 220 volt service, etc. These could all be sorted on a one hole basis. Price information and other quantified data such as size of the lot, and size of the house would probably require more than one hole to provide an adequate search field.

Further, on this type of data, the buyer is usually interested in "less than" a certain price while the salesperson not only desires this but perhaps that price plus 10 percent to add to the possible universe of listings that are selected.

TESTSRCH and its data file TEST-DATA embodies only a skeletal sample of the real estate application but I think it is adequate to demonstrate the computerized needlesort system.

A record is limited to essentially one line (75 bytes) and includes a sort selection on four simple real estate descriptors and price. The text portion was written as a representative brief format of a full blown listing card.

It was with these thoughts in mind that TESTSRCH was written to test the capability of a computer program to simulate this system. Table 1 shows a conceptual comparison of the two systems.

**Hardware/Software**

The computer system I used is a North-Star Horizon II with 56K of RAM and two double-density disk drives, NorthStar DOS and Release 5.0 NorthStar Basic. Peripherals consist of a SOROC IQ 120 Terminal and a TI 810 printer.

**Structured Programming**

According to many writers, Basic is not a good language candidate for structured programming. In writing this program I referred to a book titled *Techniques of Program Structure and Design* by Edward Yourdon. I consider it quite lucid and complete.

**Building Blocks**

There are three basic building blocks and one extension of these blocks that are used in structured design. They are:

*The process box*. The process box can be as simple as one statement or consist of a group of statements having only one entry and one exit. See Figure 1.1

*The generalized loop mechanism*. The loop mechanism is usually referred to as the DO-WHILE statement. The FOR-NEXT loop in Basic is one form of this loop that is satisfactory. A DO-WHILE loop can be written but requires the use of a GOTO statement. See Figure 1.2

*The binary decision mechanism*. This is referred to as the IF-THEN-ELSE statement and NorthStar Basic does support this statement although some care must be used if line numbers are referenced to preserve the one entry/one exit concept. See Figure 1.3

*The CASE mechanism*. This is called an extension mechanism by Yourdon. It is referred to as the CASE-OF statement. This is supported by Basic with either the ON-GOTO statement or by a series of IF-THEN statements. See Figure 1.4

Yourdon points out that all these mechanisms have but one entry and one exit. All of these in turn may be successively transformed to a single process box. On the other hand, the reverse sequence of these transformations can be used to design a program in top down fashion, i.e., starting with a single process box and expanding it to a complex structure made of the basic mechanisms.

One of the goals of structured programming was the elimination of the GOTO statement. However, with the desire to use structured programming with such languages as Cobol and Fortran a set of rules for its use was formulated. They are roughly as follows:

1. Limit the GOTO statement to internal use within a module or subroutine. The thought here, is to limit the mischief of which the GOTO statement is capable.

2. A GOTO statment shall not branch to a statement outside of the module or subroutine containing the GOTO. This reinforces the idea that no more than one entry and one exit shall exist for each module/subroutine.

3. A GOTO statement may branch to the exit of the module containing the GOTO statement.

4. A GOTO statement may branch to a line with a greater line number.

*Table 1. System Comparison.*

| Needlesort | | Computer |
|---|---|---|
| Card file | | Disk file |
| Card | | Record |
| Hole | | One byte field |
| Notched hole | | (Y)es/(T)rue/1 |
| Unnotched hole | | (N)o/(F)alse/0 |
| A number requires several groups of holes | | A number requires a field of bytes equal to the length of the number (if a string). Requires five bytes if a non-string. |

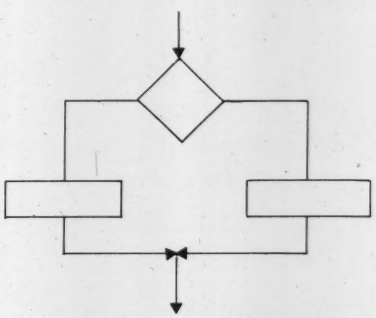

*Figure 1.3. The Binary-Decision Mechanism.*

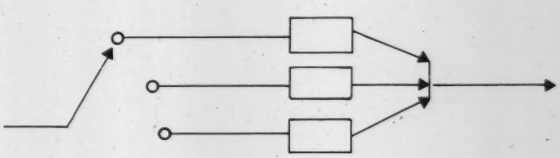

*Figure 1.4. The Case Mechanism.*

*Figure 2.0. Field Assignment for a Record.*

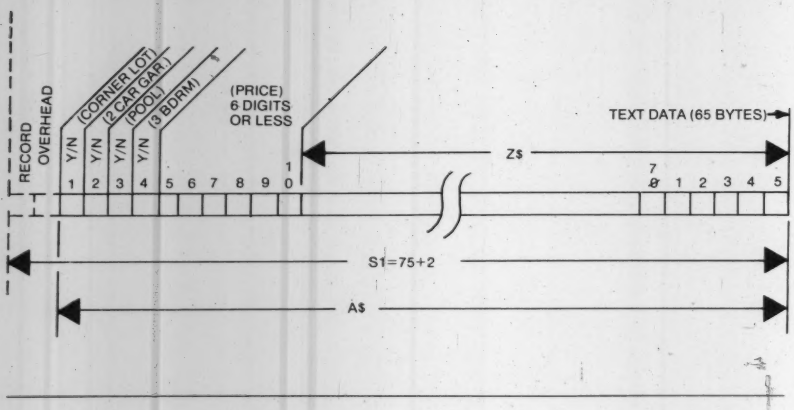

*Figure 3.1. Main Program Module.*

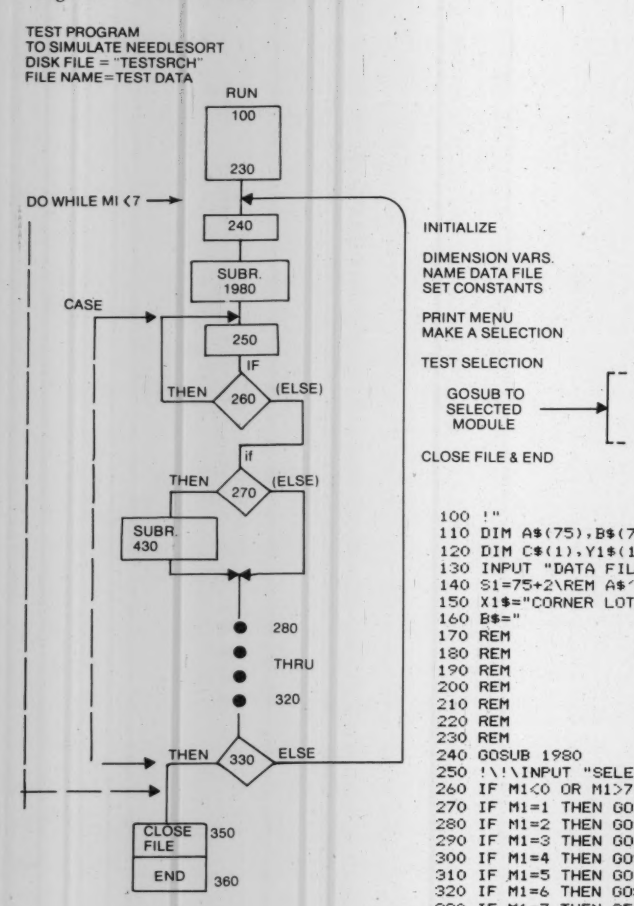

**Implementing a Structured Program**

Top down design requires careful thought. It's OK to jot down a few notes and make an assignment of the fields in a record. Figure 2.0 depicts the assignments made for the example program.

The rest of this article describes the steps I followed in writing TESTSRCH.

Step One. Write a descriptive title for the program. This becomes the first process box. In our example:

Test Program
to simulate needlesort
(Program and disk
file name TESTSRCH)
(Data file name TESTDATA)

Step Two. The next series of thoughts should be directed towards the steps/modules/subroutines required to make up the total program. TESTSRCH would require a data base system and use a menu-driven main program to provide the facilities for:

A main program module
Creating records
Updating records
Examining records
Listing records
Deleting a record
.
.
.
Sorting the records
Printing the sort results

Note: The gap in the list is where other requirements can be added later. At this stage we are in an interactive thought process developing the overall structure of the program. This list contains the statements to be pulled out of the first process box and they in turn are process boxes.

Step Three. It is now time to commit these thoughts to paper. I use 11" x 17" sheets held horizontally so that room is

```

**Needlesort, continued...**

available for three areas of information: the structured flow diagram, the process statements, and the coding of the module. I title each page with the name of one of the above process boxes, including the first one which is the main program module.

With the statement process box named and placed in the upper left corner, I start a little below the top center of the page and list the things this process box should accomplish in order. A good eraser is just as necessary at this stage as a pencil.

This process of writing statements down stimulates the thought processes and eventually I decide that I have finished the list of statements that make up the module. As progress is made, however, into the other modules I often find that other process boxes should have been listed/deleted. So I add to it and feel no chagrin that I didn't think of it in the first place.

I also remind myself that paper isn't all that expensive; if my work sheet gets so messy that I can't think progressively, I get another sheet and rewrite it in an orderly manner. I place notes to the right of this list that are my thoughts on implementing these statements. These notes may, in some cases, be actual Basic coding statements. I continue this process for all of the modules identified in Step Two.

Step Four. On the right side of the paper I write the code using Basic statements that will implement the structure statements starting with the main program module. DIMension statements will be added as they become known. REM statements are proper to describe the path and substance of the program.

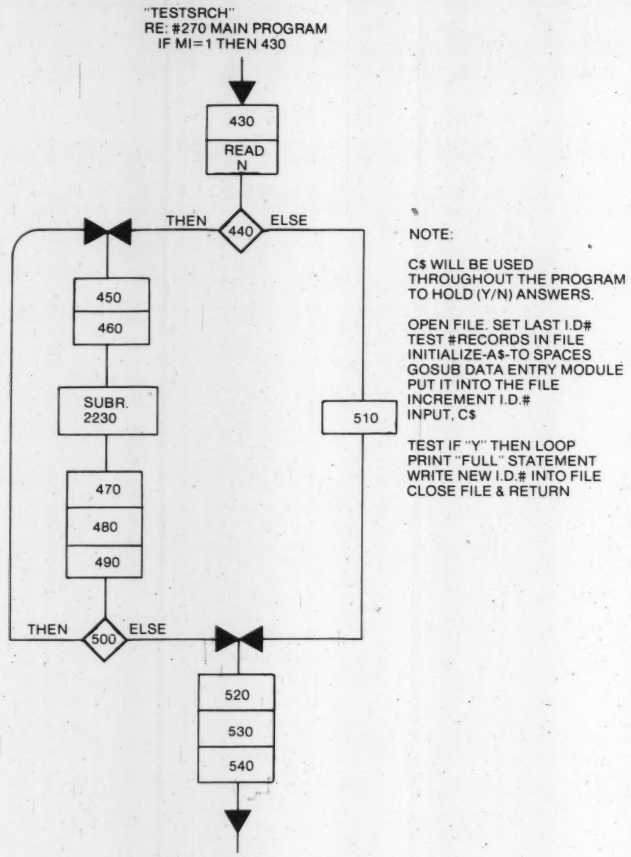
Step Five. In a logical manner, I proceed to code the rest of the subroutines and modules identified in the main program. As each is finished, where practical, it should be exercised and debugged. Each will become a building block upon which the balance of the modules can depend.

Step Six. At this time, or perhaps even before, I make up structure-type flow diagrams. The emphasis is on depicting structure mechanisms and proving them of legal status. I use line numbers in the flow diagram boxes to keep the diagram uncluttered. If a structural problem exists, the diagram should be of assistance. I rearrange, recode and rerun until it becomes clear that I have a valid running module. Another goal to be kept in mind is the minimal use of the GOTO statement and then only as the GOTO rules allow. I continue until all modules are structured and running.

I hope that the above procedures haven't discouraged anyone. The success of coding a well formed program, with good documentation, within the structured regimen is a reward in itself.

Step Seven. I make a listing of each module and place it on the right side of the work sheet. I line up the structured statements with the listing and then add on the structured flow diagram on the far left side of the work sheet. Figures 3.1 to 3.9 were generated using this procedure.

*Figure 3.2. New Data Module.*



```
380 REM                *** NEW DATA MODULE ***
390 REM                          This Module installs all the new records
400 REM                          to a named file. Random Access files are
410 REM                          used.  It calls the Data Entry Subroutine
420 REM
430 OPEN#0,D$\READ #0,N
440 IF N<150 THEN 450 ELSE 510
450 A$=B$+B$
460 GOSUB 2230
470 WRITE#0%N*S1+5,A$,NOENDMARK
480 N=N+1
490 INPUT "ADD ANOTHER ? ",C$
500 IF C$="Y" THEN 450 ELSE 520
510 !"FILE FULL"
520 WRITE#0%0,N,NOENDMARK
530 CLOSE #0
540 RETURN
550 REM              --- END NEW DATA MODULE ---
560 REM
570 REM
```

Figure 4 is the listing of the records of the TESTDATA file. Each line is equivalent to one record (75 bytes). The first four bytes are the "Y" and "N" descriptors. The next six bytes are reserved for the price field and the balance (65 bytes) is allocated for the text of a foreshortened Real Estate listing.

Figure 5 is an example of a typical prompt and answer session. This printed output from the computer can now be reviewed and checked for accuracy of selection. Remember that the price should be less than or equal to 110% of the price selected.

The test program has served its purpose. We have written it in structured form and it has shown that the basic sort/search algorithm is practical and predictable. With expansion of the number of descriptors and parameters and the addition of input error testing and implementing of a suitable output format a finished Real Estate listings program would result. □

## Blank Cassettes

The quality of cassette tape used to save and load programs is an important factor in getting the programs to run. Tape quality for computers is measured differently from quality for audio tape. The tape must be capable of sending to the computer the electronic signals of the program without transmitting extraneous noises that could interfere with the ability of the computer to load the tape.

Our blank cassettes are tested and recommended for computer use. C-10 cassette, 5 min. per side, blank label on each side in a Norelco hard plastic box. [0010] $1.25 each.

## Head Cleaner

After hours of use, the read/write head in a cassette recorder will pick up minute particles of tape oxide. This dirt will hardly be noticable in dictation or music. But it is very noticable in computer use. One dropped bit in 16,000, and the program won't load.

Help keep your recorder in top shape with our non-abrasive head cleaner. It consists of 18 inches of stiff cleansing fabric in a standard cassette shell. One 10-second pass every 40 hours of use will keep your heads as good as new. [0011] $2.00. Send payment plus $1.00 Shipping per order to:

# WHY DO UNNECESSARY SURGERY ON YOUR APPLE?

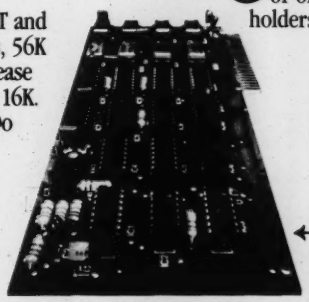
Sooner or later, you're going to need a 16K memory-expansion for your Apple. When you do, we suggest you buy it on the card that doesn't require poking about on the motherboard — nor removing a RAM chip, installing a strap, etc.

The Ramex 16™ RAM Board just plugs in. It's simple, reliable, and does its own memory refresh, with no additional connections.

Run Pascal, Fortran, FP, INT and other alternate languages, 56K CPM with a Z80 Softcard, increase usable memory for Visicalc by 16K. The possibilities are endless. Do it with the finest, closed-track engraved, epoxy sealed, 16K board available — the Ramex 16. And do it without unnecessary surgery on your Apple.

In spite of its quality, the Ramex 16 costs less than most other expansion boards — just $139.95. And it comes with a *one year* limited warranty, instead of the usual 90 days.

Get the Ramex 16 from your local dealer, or order direct. Visa and Mastercard holders call toll-free, 1-800-835-2246.



*Look, ma, no straps!*

## AND

# WHY YOU NEED THE MANAGER.

If you've invested money in one or more Apple memory-expansion cards, The Manager will make them work for you.

The Manager will set up a complete turnkey memory management system for you, using either one or two 16K cards (including your old firmware card — no need to sell it for a song).

The Manager's first utility, HIDOS,™ will hand you back 10.5K of your Apple's memory space by loading DOS onto a RAM card at boot. HIDOS will automatically load an alternate language onto an available 16K card. And it will amend a copy of your System Master so that the utilities (FID, RENUMBER, etc.) make full use of the extra available memory.

The Manager's second utility, SOLIDOS,™ will turn a 16K card into a 45-sector disk-drive emulator that gives you instantaneous access to a large "disk" file for incredibly fast sorts, searches and calculations.

In short, The Manager makes using memory-expansion cards for your Apple into a simple, no-hassle pleasure. Available at your local dealer or direct for an introductory price of just $34.95.

If you have not yet invested in a 16K card, but are thinking about it, may we suggest the Ramex 16.™ Even though the Ramex 16 is top quality, its low price ($139.95) will save you more than enough to get The Manager, too! Mastercard and Visa holders order toll-free, 1-800-835-2246.

# Super Paddle

Are the paddle controllers on your Apple wearing out? Or did you get a new Apple without paddles?

We've got good news for you! Super Paddles. Each paddle control consists of a high-precision linear potentiometer and a big (1/2" D) industrial-quality pushbutton mounted in a sturdy high-impact molded plastic case which matches the Apple. Each of the two paddles is connected with a long 5 foot cable to the Apple paddle socket.

Every component in a set of Super Paddles is the very finest quality available. The set is backed by a 90-day limited warranty from the manufacturer as well as Peripherals Plus' moneyback guarantee of satisfaction.

To order, send $39.95 plus $2.00 postage and handling to Creative Computing, Dept. C0526, One Park Avenue, Room 458, New York, N.Y. 10016. Orders may also be charged to your Visa, MasterCard or American Express account—by mail include credit card name, number and expiration data, or if you prefer, use our 24 hour toll-free number, 800-631-8112. In NJ only 201-540-0445.

## Why would anyone spend $59.95 for a joystick?

# Super Joystick

**Super Joystick**

Star Wars. Played with paddles, it's difficult at best and frustrating at worst. But with a joystick, it becomes an entirely new experience. It's still challenging. It's also fun. And very addictive.

Have you ever used a drawing program in which one paddle controls the horizontal movement of the "brush" and the other paddle the vertical? It's slow, tedious work. But with a joystick, drawing is an absolute joy.

**Exceptional Precision**

The Apple high-resolution screen is divided into a matrix of 160 by 280 pixels. To do precise work on this screen, you need a precise device. Most potentiometers used in paddle controls are not quite linear. If you rotate a paddle control at a constant speed, you'll notice that the cursor speeds up slightly at the beginning and end of the paddle rotation.

The Super Joystick has a pure resistive circuit which is absolutely linear within one tenth of one percent. In other words, it would give you precise control over an image of 1000 by 1000 pixels, were such resolution available. Thus it is suitable for high precision professional applications as well as educational and hobbyist ones.

**Matched to your application**

The Super Joystick also has two external trim adjustments, one for each direction. This allows you to perfectly match the unit to your application and computer. Say you want to work in a square area instead of the rectangular screen. Just reduce the horizontal size with the trim control.

How many times have you played Space Invasion and had your thumb ache for hours from the repeated button pressing? This won't happen with the Super Joystick. Its two pushbuttons are big. Moreover, they use massive contact surfaces with a life of well over 1,000,000 contacts. A few games of Super Invasion using these big buttons will justify the purchase of the Super Joystick.

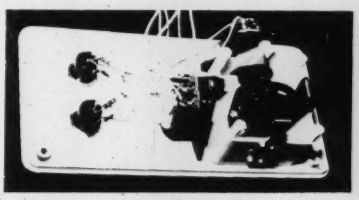
The Super Joystick is self-centering in both directions. That means when you take your hand off it, the control will return to the center. However, if you want it to stay where you leave it, self-centering may be easily disabled by removing two springs.

The Super Joystick plugs right into the paddle control socket and doesn't require an I/O slot.

**High-quality construction**

The sturdy case of the Super Joystick matches that of the Apple computer. Every component used is the very highest quality available. The Super Joystick even uses a full 16-conductor ribbon cable and you can add a second joystick (using our Select-A-Port extension unit for example) if you wish. The first Super Joystick replaces Paddles 0 and 1. You may not realize it, but the Apple has the capacity to support four paddle controls. A second Super Joystick would replace Paddles 2 and 3.

We invite your comparison of the Super Joystick with any other unit available. Order it and use it for 30 days. If you're not completely satisfied, return it for a prompt and courteous refund plus your return postage. You can't lose.



*By removing two springs, self-centering can be defeated.*

The Super Joystick consists of a self-centering linear joystick, two trim controls, and two pushbuttons mounted in an attractive case. It comes complete with schematics and a 90-day limited warranty. Cost is $59.95.

**Order Today**

Send $59.95* plus $2.00 postage and handling to Creative Computing, Dept. C0525, One Park Avenue, New York, N.Y. 10016. Orders may also be charged to your Visa, MasterCard or American Express account—by mail include credit card name, number and expiration date, or if you prefer, use our 24 hour toll-free number, 800-631-8112. In NJ only 201-540-0445.

Experience the joys of using the world's finest joystick. Order your Super Joystick at no obligation today.

*NJ residents add 5% sales tax.

**Peripherals Plus**

**Peripherals Plus Extension Units Improve Your Apple II**

## EZ Port

E Z Port extends the game I/O port to the outside of your Apple II so that you don't have to open the computer when switching from paddles to joystick, VersaWriter, etc.

E Z Port goes beyond just extending the I/O. We utilize ZIP (Zero Insertion Pressure) sockets. With ZIP sockets, you plug in a 16 pin DIP plug and throw a small switch which engages the connections within the socket. *No stress* is exerted on the 16 pin connector until the switch is thrown.

Ordinary DIP sockets are not designed to be used over and over—eventually they won't make contact. Also repeatedly stressing a 16 pin connector will cause pins to snap off. So, E Z Port will not only *outlast* other I/O extenders, your paddles, VersaWriter and joysticks will last longer too!

Installation is easy: Plug E Z Port's cable into the game I/O, run the 24" cable to the outside of the computer, then peel the protective paper from the special adhesive strip and attach E Z Port to the side of your Apple II. Now making I/O changes will be quick, easy and safe!

Only $24.95. Ordering information below.

## Select A Port

Like the EZ Port, the Select A Port extends the game I/O port to the outside of your Apple II. However, the Select A Port also allows you to permanently plug in up to four peripherals simultaneously. It consists of five switchable I/O ports. The first socket directly parallels the game socket in the Apple. It can be utilized for sensitive devices for which diode isolation would interfere. (There is a switch provided for future expansion and this socket will override the other four). It is mounted in a 6" x 2 3/4" x 1/2" sturdy high impact plastic case. You simply switch on the peripheral to be used (joysticks, paddles, VersaWriter, etc.) and you are ready—no plugging or unplugging of delicate 16 pin connectors. You save wear and tear on your peripherals, your Apple II, and your nerves.

**Dual Joysticks**

With the Select A Port you can also use two joysticks simultaneously. The Apple II has the capability to read more than just two game controllers (paddles). The second I/O port on the Select A Port is cross wired so that it can be reversed and will read Paddles 2 and 3. Just plug another joystick into any of the remaining three ports and enjoy dual joystick operation. Dual joysticks and no more hassles with connectors. Only $59.95.

Send payment* indicated plus $2.00 per order postage and handling to Creative Computing, Department C062M, One Park Avenue, Room 458, New York, N.Y. 10016. Orders may also be charged to your Visa, MasterCard or American Express account—by mail include credit card name, number and expiration date, or if you prefer, use our 24-hour toll free number, 800-631-8112. In N.J. only 201-540-0445.

**Peripherals Plus**

*NJ residents add 5% sales tax.

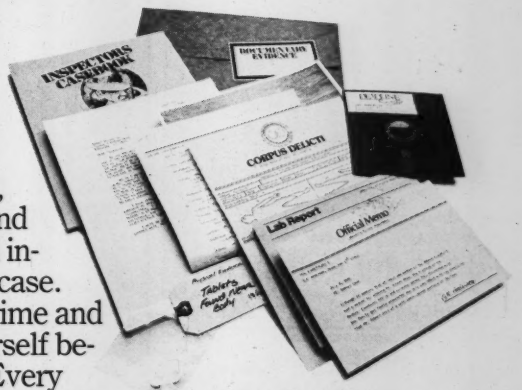
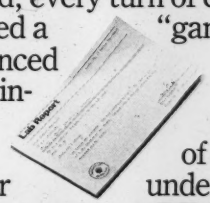
# DEADLINE™

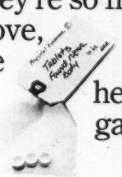
## Twelve hours to find the murderer. One false move, and he kills again.



You are about to investigate one of the deadliest plots in the annals of crime. A locked door. A dead man. And 12 hours to solve the murder. That's where you begin. Ahead of you, a treacherous web of motives and suspicion. And only by bringing your utmost skills of logic and intuition into play can you successfully solve the case.

Working from a complete dossier on the crime and the myriad clues along the trail, you'll find yourself becoming totally immersed in the investigation. Every scrap of evidence, every lead, every turn of events is far too realistic for DEADLINE to be considered a "game" or "fantasy." And its degree of interactiveness is so highly advanced that, for the first time in the genre, the characters actually possess independent, flesh-and-blood personalities. In fact, they're so free of your control that should you make the wrong move, one of them may do you in. Your next great adventure is neither under ground nor out in space. The real challenge is here. Just try and beat DEADLINE. You'll find the case awaiting investigation at fine computer stores everywhere.





DEADLINE—First of the INTERLOGIC™ Mystery Series from Infocom, makers of ZORK™ I and ZORK II.
Now available for Apple® II, ATARI® 400/800, IBM Personal Computer, NEC PC-8000, CP/M®, and PDP™-II.

**INFOCOM™**
55 Wheeler St., Cambridge, MA 02138

# SD Systems ExpandoRAM III

# 256K RAM $879.95

## Single User System

*SBC-200, 64K ExpandoRAM II, Versafloppy II, CP/M 2.2*

## $1095.00

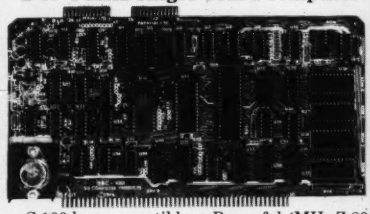
4 MHz Z-80A CPU, 64K RAM, serial I/O port, parallel I/O port, double-density disk controller, CP/M 2.2 disk and manuals, system monitor, control and diagnostic software.

*Add $100.00 for upgrade to ExpandoRAM III 64K (expandable to 256K)*

***-All boards are assembled and tested-***

## SBC-200

**2 or 4 MHz single board computer**



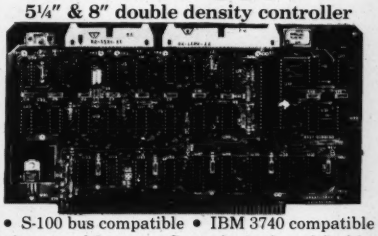
• S-100 bus compatible • Powerful 4MHz Z-80A CPU • Synchronous/asynchronous serial I/O port with RS-232 interface and software programmable baud rates up to 9600 baud • Parallel input and parallel output port • Four channel counter/timer • Four maskable, vectored interrupt inputs and a non-maskable interrupt • 1K of on-board RAM • Up to 32K of on-board ROM • System monitor PROM included

The SBC-200 is an excellent CPU board to base a microcomputer system around. With on-board RAM, ROM, and I/O, the SBC-200 allows you to build a powerful three-board system that has the same features found in most five-board microcomputers. The SBC-200 is compatible with both single-user and multi-user systems.

**CPU-30200A** *A & T with monitor* **$299.95**

## Versafloppy II

**5¼" & 8" double density controller**



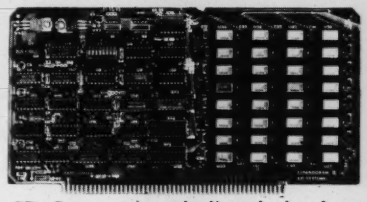
• S-100 bus compatible • IBM 3740 compatible soft sectored format • Controls single and double-sided drives, single or double density, 5¼" and 8" drives in any combination of four simultaneously • Drive select and side select circuitry • Analog phase-locked loop data seperator • Vectored interrupt operation optional • Standard CP/M 2.2 disk operating • Control/diagnostic software PROM included

The Versafloppy II is faster, more stable and more tolerant of bit shift and "jitter" than most controllers. All control and diagnostic software included.

**IOD-1160A** *A & T* ..... **$359.95**
*For CP/M 2.2 and manual set add* ..... **$99.95**

## ExpandoRAM III

**64K to 256K expandable RAM board**



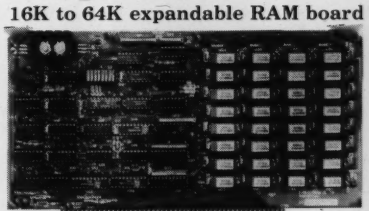
SD Systems has duplicated the famous reliability of their ExpandoRAM I and II boards in the new ExpandoRAM III, a board capable of containing 256K of high speed RAM. Utilizing the new 64K x 1 dymanic RAM chips, you can configure a memory of 64K, 128K, 192K, or 256K, all on one S-100 board. Memory address decoding is done by a programmed bipolar ROM so that the memory map may be dip-switch configured to work with either COSMOS/MPM-type systems or with OASIS-type systems.

Extensive application notes concerning how to operate the ExpandoRAM III with Cromemco, Intersystems, and other popular 4 MHz Z-80 systems are contained in the manual.

**MEM-65064A** *64K A & T* ..... **$495.00**
**MEM-65128A** *128K A & T* ..... **$639.95**
**MEM-65192A** *192K A & T* ..... **$769.95**
**MEM-65256A** *256K A & T* ..... **$879.95**

## ExpandoRAM II

**16K to 64K expandable RAM board**



• S-100 bus compatible • Up to 4MHz operation • Expandable from 16K to 64K • Uses 16 x 1 4116 memory chips • Page mode operation allows up to 8 memory boards on the bus • Phantom output disable • Invisible on-board refresh

The ExpandoRAM II is compatible with most S-100 CPUs. When other SD System' series II boards are combined with the ExpandoRAM II, they create a microcomputer system with exceptional capabilities and features.

**MEM-16630A** *16K A & T* ..... **$345.00**
**MEM-32631A** *32K A & T* ..... **$365.00**
**MEM-48632A** *48K A & T* ..... **$385.00**
**MEM-64633A** *64K A & T* ..... **$399.95**

## PROM-100

**Versatile EPROM Programmer**

• S-100 bus compatible • Programs 2708, 2758, 2716, 2732, 2516 EPROMs • DIP switch selection of EPROM type • 25 VDC programming pulse generated on-board • Very fast programming and verification • Zero insertion force socket • Programming software included on 8" diskette

**MEM-99520K** *Kit w/software* ..... **$189.95**
**MEM-99520A** *A & T w/software* ... **$249.95**

## Multi-User System

*SBC-200, 256K ExpandoRAM III, Versafloppy II, MPC-4 COSMOS Multi-User Operating System, C BASIC II*

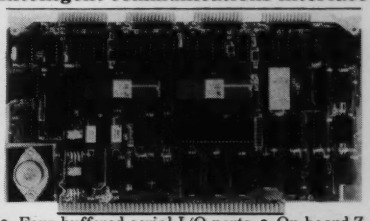
## $1995.00

Two Z-80A CPUs (4 MHz), 256K RAM, 5 serial I/O ports with independently programmable baud rates and vectored interrupts, parallel input port, parallel output port, 8 counter/timer channels, real time clock, single and double sided/single or double density disk controller for 5¼" and 8" drives, up to 36K of on-board ROM, CP/M 2.2 compatible COSMOS interrupt driven multi-user disk operating system, allows up to 8 users to run independent jobs concurrently, C BASIC II, control and diagnostic software in PROM included.

***-All boards are assembled and tested-***

## MPC-4

**Intelligent communications interface**



• Four buffered serial I/O ports • On-board Z-80A processor • Four CTC channels • Independently programmable baud rates • Vectored interrupt capability • Up to 4K of on-board PROM • Up to 2K of on-board RAM • On-board firmware

**This is not just another four-port serial I/O board!** The on-board processor and firmware provide sufficient intelligence to allow the MPC-4 to handle time consuming I/O tasks, rather than loading down your CPU. To increase overall efficiency, each serial channel has an 80 character input buffer and a 128 character output buffer. The on-board firmware can be modified to make the board SDLC or BISYNC compatible. In combination with SD's COSMOS operating system (which is included with the MPC-4), this board makes a perfect building block for a multi-user system.

**IOI-1504A** *A & T with COSMOS* .. **$495.00**

**PRA-27085** *Graftrax II* ..... **$95.00**
**PRA-27083** *Extra ribbon* ..... **$14.95**

## Modems

### SMARTMODEM - Hayes

*Sophisticated direct-connect auto-answer/auto-dial modem, touch-tone or pulse dialing, RS-232C interface, programmable*

**IOM-5400A** *Smartmodem* ..... **$249.95**
**IOK-1500A** *Hayes Chronograph* ... **$199.95**

### CAT MODEMS - Novation

***CAT*** *300 baud, acoustic, answer/orginate*
**IOM-5200A** *List $189.95* ..... **$149.95**

***D-CAT*** *300 baud direct connect, answer/orginate*
**IOM-5201A** *List $199.95* ..... **$169.95**

***AUTO-CAT*** *Auto answer/orginate, direct connect*
**IOM-5230A** *List $299.95* ..... **$239.95**

### Apple-CAT - Novation

*Software selectable 1200 or 300 baud, direct connect, auto-answer/auto-dial, auxiliary 3-wire RS232C serial port for printer.*

**IOM-5232A** *Save $50.00!!!* ..... **$325.00**

## Accessories for Apple

### 16K MEMORY UPGRADE

*Add 16K of RAM to your TRS-80, Apple, or Exidy in just minutes. We've sold thousands of these 16K RAM upgrades which include the appropriate memory chips (as specified by the manufacturer), all necessary jumper blocks, fool-proof instructions, and our 1 year guarantee.*

**MEX-16100K** *TRS-80 kit* ..... **$25.00**
**MEX-16101K** *Apple kit* ..... **$25.00**
**MEX-16102K** *Exidy kit* ..... **$25.00**

### 16K RAM CARD - for Apple II

*Expand your Apple to 64K, 1 year warranty*

**MEX-16500A** *Save $70.00 !!!* ..... **$129.95**

### Z-80* CARD for APPLE

*Two computers in one, Z-80 & 6502, more than doubles the power & potential of your Apple, includes Z-80* CPU card, CP/M 2.2, & BASIC-80*

**CPX-30800A** *A & T* ..... **$299.95**

### 8" DISK CONTROLLER

*New from Vista Computer, single or double sided, single or double density, compatible with DOS 3.2/3.3, Pascal, & CPM 2.2, Shugart & Qume compatible*

**IOD-2700A** *A & T* ..... **$499.95**

### 2 MEGABYTES for Apple II

*Complete package includes: Two 8" double-density disk drives, Vista double-density 8" disk controller, cabinet, power supply, & cables, DOS 3.2/3.3, CP/M 2.2, & Pascal compatible.*

**1 MegaByte Package** *(Kit)* ..... **$1495.00**
**1 MegaByte Package** *(A & T)* ..... **$1695.00**
**2 MegaByte Package** *(Kit)* ..... **$1795.00**
**2 MegaByte Package** *(A & T)* .... **$1995.00**

### DISK DRIVES - Micro Sci

*Inexpensive disk drives for your Apple*

***A2*** *Direct replacement for Apple Disk II, works with Apple II controller as first or second drive.*

**MSM-123101** *Micro Sci A2* ..... **$429.95**

***A40*** *40 track drive for Apple II. Improved storage capacity and speed over Apple Brand drives - requires Micro Sci controller.*

**IOD-2340A** *Micro Sci A40* ..... **$399.95**

***A70*** *70 track drive for Apple II. Twice the storage capacity and three times faster than Apple Brand drives - requires Micro Sci controller*

**IOD-2370A** *Micro Sci A70* ..... **$499.95**

***Micro Sci Controller*** *Disk controller for up to two Micro Sci A40 or A70 disk drives, DOS 3.2, 3.3, Pascal, and Z-80 SoftCard compatible, includes utility disk and 40/70 track patch.*

**IOD-2300A** *Micro Sci controller* ..... **$95.00**

### VISION 80 - Vista Computer

*80 column x 24 line video card for Apple II, 128 ASCII characters, upper and lower case, 9 x 10 dot matrix with 3 dot descenders, standard data media terminal control codes, CP/M Pascal & Fortran compatible, 50/60 Hz*

**IOV-2400A** *Vista Vision 80* ..... **$375.00**

### AIO, ASIO, APIO - S.S.M.

*Parallel & serial interface for your Apple (see Byte pg 11)*

**IOI-2050K** *Par & Ser kit* ..... **$139.95**
**IOI-2050A** *Par & Ser A & T* ..... **$169.95**
**IOI-2052K** *Serial kit* ..... **$89.95**
**IOI-2052A** *Serial A & T* ..... **$99.95**
**IOI-2054K** *Parallel kit* ..... **$69.95**
**IOI-2054A** *Parallel A & T* ..... **$89.95**

### CPS MULTICARD - Mtn. Computer

*Three cards in one! Real time clock/calendar, serial interface, & parallel interface - all on one card.*

**IOX-2300A** *A & T* ..... **$199.95**

**CIRCLE 177 ON READER SERVICE CARD**

## Single Board Computer

### Z-80 STARTER KIT - SD Systems

*Complete Z-80 microcomputer with RAM, ROM, I/O, keyboard, display, kludge area, manual, & workbook*

**CPS-30100K** *KIT* ..... **$299.95**
**CPS-30100A** *A & T* ..... **$469.95**

### SYM-1 - Synertek Systems

*Single board computer with 1K of RAM, 4K of ROM, key-pad, LED display, 20ma & cassette interface on board.*

**CPK-50020A** *A & T* ..... **$249.95**

### VIC 20 - Commodore

*Complete personal computer with 5K RAM, full color, 61 key keyboard, 4 dual special-function keys, serial ports, cassette port, composite video output (connects to standard color TV set), BASIC language, & expansion port.*

**COM-VIC20** *VIC-20* ..... **Under $300.00**

### PERSONAL COMPUTERS

*Also available from Jade - Call for Price and Info*

**AIM-65, Altos, Apple II, Atari, Commodore, California Computer Sys Hewlett-Packard, Intersystems Jade, NEC, Novell, SD Systems SYM-1, Xerox, and more...**

## Video Monitors

### HI-RES 12" GREEN - Zenith

*15 MHz bandwidth, 700 lines/inch, P31 green phosphor, switchable 40 or 80 columns, small, light-weight & portable.*

**VDM-201201** *List price $150.00* .... **$118.95**

### 12" GREEN SCREEN - NEC

*20 MHz, P31 phosphor video monitor with audio, exceptionally high resolution - A fantastic monitor at a very reasonable price*

**VDM-651200** *Special Sale Price* ..... **$199.95**

### 12" COLOR MONITOR - NEC

*Hi-res monitor with audio & sculptured case*

**VDC-651212** *Color Monitor* ..... **$479.95**
**NEC-1202D** *RGB color monitor* ... **$1045.00**

### Leedex / Amdek

*Reasonably priced video monitors*

**VDM-801210** *Video 100 12" B&W* .. **$139.95**
**VDM-801230** *Video 100-80 12" B& W* **$179.95**
**VDM-801250** *12" Green Phospor* .... **$169.95**
**VDC-801310** *13" Color I* ..... **$379.95**
**VDC-801320** *Color II* ..... **$895.00**
**IOV-2300A** *DVM board for Apple* .. **$199.95**

## Video Terminals

### TELEVIDEO 910

*Full featured - inexpensive terminal*

**VDT-901210** *List 795.00* ..... **$695.00**

### TELEVIDEO 950

**VDT-901250** *List $1195.00* ..... **$995.00**

### AMBER SCREEN - Volker Craig

*Detachable keyboard, amber on black display, 7 x 9 dot matrix, 10 program function keys, 14 key numeric pad, 12" non-glare screen, 50 to 19,200 baud, direct cursor control, auxiliary bi-directional serial port*

**VDT-351200** *List $795.00* ..... **$645.00**

### VIEWPIONT - ADDS

*Detachable keyboard, serial RS232C interface, baud rates from 110 to 19,200, auxiliary serial output port, 24 x 80 display.*

**VDT-501210** *Sale Priced* ..... **$639.95**

### DIALOGUE 80 - Ampex

## S-100 CPU Boards

### THE BIG Z* - Jade

*2 or 4 MHz switchable Z-80* CPU with serial I/O, accomodates 2708, 2716, or 2732 EPROM, baud rates from 75 to 9600*

**CPU-30201K** *Kit* ..... **$139.95**
**CPU-30201A** *A & T* ..... **$189.95**
**CPU-30200B** *Bare board* ..... **$35.00**

### 2810 Z-80* CPU - Cal Comp Sys

*2/4 MHz Z-80A* CPU with RS-232C serial I/O port and on board MOSS 2.2 monitor PROM, front panel compatible*

**CPU-30400A** *A & T* ..... **$269.95**

### CB-2 Z-80 CPU - S.S.M.

*2 or 4 MHz Z-80 CPU board with provision for up to 8K of ROM or 4K of RAM on board, extended addressing, IEEE S-100, front panel compatible.*

**CPU-30300K** *Kit* ..... **$239.95**
**CPU-30300A** *A & T* ..... **$299.95**

## S-100 PROM Boards

### PROM-100 - SD Systems

*2708, 2716, 2732 EPROM programmer w/software*

**MEM-99520K** *Kit* ..... **$189.95**
**MEM-99520A** *A & T* ..... **$249.95**

### PB-1 - S.S.M.

*2708, 2716 EPROM board with built-in programmer*

**MEM-99510K** *Kit* ..... **$154.95**
**MEM-99510A** *A & T* ..... **$219.95**

### EPROM BOARD - Jade

*16K or 32K uses 2708's or 2716's, 1K boundary*

**MEM-16230K** *Kit* ..... **$79.95**
**MEM-16230A** *A & T* ..... **$119.95**

## S-100 Video Boards

### VB-3 - S.S.M.

*80 characters x 24 lines expandable to 80 x 48 for a full page of text, upper & lower case, 256 user defined symbols, 160 x 192 graphics matrix, memory mapped, has key board input.*

**IOV-1095K** *4 MHz kit* ..... **$349.95**
**IOV-1095A** *4 MHz A & T* ..... **$439.95**
**IOV-1096K** *80 x 48 upgrade* ..... **$39.95**

### VDB-8024 - SD Systems

*80 x 24 I/O mapped video board with keyboard I/O, and on-board Z-80A*.*

**IOV-1020A** *A & T* ..... **$459.95**

### VIDEO BOARD - S.S.M.

*64 characters x 16 lines, 128 x 48 matrix for graphics, full upper/lower case ASCII character set, numbers, symbols, and greek letters, normal/reverse/blinking video, S-100.*

**IOV-1051K** *Kit* ..... **$149.95**
**IOV-1051A** *A & T* ..... **$219.95**
**IOV-1051B** *Bare board* ..... **$34.95**

## S-100 Motherboards

### ISO-BUS - Jade

*Silent, simple, and on sale - a better motherboard*

***6 Slot (5¼" x 8¾")***

**MBS-061B** *Bare board* ..... **$19.95**
**MBS-061K** *Kit* ..... **$39.95**
**MBS-061A** *A & T* ..... **$49.95**

***12 Slot (9¾" x 8¾")***

**MBS-121B** *Bare board* ..... **$29.95**
**MBS-121K** *Kit* ..... **$69.95**
**MBS-121A** *A & T* ..... **$89.95**

***18 Slot (14½" x 8¾")***

**MBS-181B** *Bare board* ..... **$49.95**
**MBS-181K** *Kit* ..... **$99.95**
**MBS-181A** *A & T* ..... **$139.95**

## S-100 RAM Boards

### MEMORY BANK - Jade

*4 MHz, S-100, bank selectable, expandable from 16K to 64K*

**MEM-99730B** *Bare Board* ..... **$49.95**
**MEM-99730K** *Kit no RAM* ..... **$199.95**
**MEM-32731K** *32K Kit* ..... **$239.95**
**MEM-64733K** *64K Kit* ..... **$279.95**
*Assembled & Tested* ..... add **$50.00**

### 64K RAM - Calif Computer Sys

*4 MHz bank port / bank byte selectable, extended addressing, 16K bank selectable, PHANTOM line allows memory overlay, 8080 / Z-80 / front panel compatible.*

**MEM-64565A** *A & T* ..... **$575.00**

### 64K STATIC RAM - Mem Merchant

*64K static S-100 RAM card, 4-16K banks, up to 8MHz*

**MEM-64400A** *A & T* ..... **$789.95**

### 32K STATIC RAM - Jade

*2 or 4 MHz expandable static RAM board uses 2114L's*

**MEM-16151K** *16K 4 MHz kit* ..... **$169.95**
**MEM-32151K** *32K 4 MHz kit* ..... **$299.95**
*Assembled & tested* ..... add **$50.00**

### 16K STATIC RAM - Mem Merchant

*4 MHz 16K static RAM board, IEEE S-100, bank selectable, Phantom capability, addressable in 4K blocks, "disable-able" in 1K segments, extended addressing, low power*

**MEM-16171A** *A & T* ..... **$164.95**

## S-100 Disk Controllers

### DOUBLE-D - Jade

*Double density controller with the inside track, on-board Z-80A*, printer port, IEEE S-100, can function on an interrupt driven buss*

**IOD-1200K** *Kit* ..... **$299.95**
**IOD-1200A** *A & T* ..... **$375.00**
**IOD-1200B** *Bare board* ..... **$59.95**

### DOUBLE DENSITY - Cal Comp Sys

*5¼" and 8" disk controller, single or double density, with on-board boot loader ROM, and free CP/M 2.2* and manual set.*

**IOD-1300A** *A & T* ..... **$374.95**

## S-100 I/O Boards

### S.P.I.C. - Jade

*Our new I/O card with 2 SIO's, 4 CTC's, and 1 PIO*

**IOI-1045K** *2 CTC's, 1 SIO, 1 PIO* .. **$179.95**
**IOI-1045A** *A & T* ..... **$239.95**
**IOI-1046K** *4 CTC's, 2 SIO's, 1 PIO* **$219.95**
**IOI-1046A** *A & T* ..... **$299.95**
**IOI-1045B** *Bare board w/ manual* ... **$49.95**

### I/O-4 - S.S.M.

*2 serial I/O ports plus 2 parallel I/O ports*

**IOI-1010K** *Kit* ..... **$179.95**
**IOI-1010A** *A & T* ..... **$249.95**
**IOI-1010B** *Bare board* ..... **$35.00**

## S-100 Mainframes

### MAINFRAME - Cal Comp Sys

*12 slot S-100 mainframe with 20 amp power supply*

**ENC-112105** *Kit* ..... **$329.95**
**ENC-112106** *A & T* ..... **$399.95**

### EPROM ERASER - Spectronics

*Ultra-violet EPROM erasers*

**XME-3100A** *With out timer* ..... **$69.50**
**XME-3101** *With timer* ..... **$94.50**
**XME-3200** *Economy Model* ..... **$39.95**

**CIRCLE 177 ON READER SERVICE CARD**

## Disk Drives

Handsome metal cabinet with proportionally balanced air flow system • Rugged dual drive power supply • Power cable kit • Power switch, line cord, fuse holder, cooling fan • Never-Mar rubber feet • All necessary hardware to mount 2-8" disk drives, power supply, and fan • Does not include signal cable

***Dual 8" Subassembly Cabinet***

**END-000420** *Bare cabinet* ..... **$59.95**
**END-000421** *Cabinet kit* ..... **$225.00**
**END-000431** *A & T* ..... **$359.95**

***8" Disk Drive Subsystems***
***Single Sided, Double Density***

**END-000423** *Kit w/2 FD100-8Ds* . **$924.95**
**END-000424** *A & T w/2 FD100-8Ds* **$1124.95**
**END-000433** *Kit w/2 SA-801Rs* ... **$999.95**
**END-000434** *A & T w/2 SA-801Rs* **$1195.00**

***8" Disk Drive Subsystems***
***Double Sided, Double Density***

**END-000426** *Kit w/2 DT-8s* ..... **$1224.95**
**END-000427** *A & T w/2 DT-8s* ... **$1424.95**
**END-000436** *Kit w/2 SA-851Rs* .. **$1295.00**
**END-000437** *A & T w/2 SA-851Rs* **$1495.00**

## 5¼" Disk Drives

***Shugart SA400L*** *sngl-sided dbl-density 40 track*
**MSM-104000** .. $234.95 ea 2 for **$224.95 ea**

***Shugart SA450*** *dbl-sided dbl-density 70 track*
**MSM-104500** .. $349.95 ea 2 for **$329.95 ea**

***Qume DT-5*** *dbl-sided dbl-density 80 track*
**MSM-750050** .. $359.95 ea 2 for **$349.95 ea**

***MPI B-51*** *sngl-sided dbl-density 40 track*
**MSM-155100** .. $234.95 ea 2 for **$224.95 ea**

***MPI B-52*** *dbl-sided dbl-density 40 track*
**MSM-155200** .. $344.95 ea 2 for **$334.95 ea**

***MPI B-91*** *sngl-sided dbl-density 77 track*
**MSM-155300** .. $369.95 ea 2 for **$359.95 ea**

***MPI B-92*** *dbl-sided dbl-density 77 track*
**MSM-155400** .. $469.95 ea 2 for **$459.95 ea**

## 8" Disk Drives

***Shugart SA801R*** *single-sided double-density*
**MSF-10801R** .. $394.95 ea 2 for **$389.95 ea**

***Shugart SA851R*** *double-sided double-density*
**MSF-10851R** .. $554.95 ea 2 for **$529.95 ea**

***Qume DT-8*** *double-sided double-density*
**MSF-750080** .. $524.95 ea 2 for **$499.95 ea**

***Siemens FDD 100-8*** *sngl-sided dbl-density*
**MSF-201120** .. $384.95 ea 2 for **$349.95 ea**

### BUS PROBE - Jade

*S-100 diagnostic analyzer board, dynamic visual display of all 96 IEEE S-100 signals, aids in real time analysis of faulty hardware and software*

**TSX-200B** *Bare Board* ..... **$59.95**
**TSX-200K** *Kit* ..... **$119.95**
**TSX-200A** *A & T* ..... **$149.95**

# ams...short programs...sho

This elegant program produces geometric designs by selecting 20 random points and connecting them. The end product is suitable for viewing or designing bizarre dungeon dice.

## One Line Graphics Demo

**David Simons**

```
10  DIM X(20),Y(20): HGR2 : HCOLOR= 3: FOR A = 1 TO 20:X =
INT ( RND (1) * 279) + 1:Y =  INT ( RND (1) * 191) + 1:X(A)
= X:Y(A) = Y: FOR B = 1 TO A: HPLOT X,Y TO X(B),Y(B): NEXT B
: FOR W = 1 TO 300: NEXT W,A: FOR W = 1 TO 999: NEXT W: RUN
```

David Simons, 7 Barnsley Rd., Lynnfield, MA 01940.

# NUM-WORD

**Michael Sorens**

Numword is a program which can be used as a module in another program to convert a single precision number to an English phrase of dollars and cents. I use it in a checking program I wrote.

For example, an input of 206 will produce an output of "two hundred six and 00/100 dollars." The program as shown below is written to be stand-alone on a TRS-80 Model I so one can become familiar with it.

```
5000 REM ********** NUMWORD     6/1/80
5005 REM ********** WRITTEN BY MICHAEL SORENS
5010 CLEAR 200:CLS
5020 DIM B$(28):FOR T=2 TO 28:READ B$(T):NEXT
5030 INPUT"ENTER AMOUNT";X
5040 CENTS=INT((X-INT(X))*100+.5):X=INT(X)
5060 IF X THEN GOSUB 5100 :IF CENTS THEN PRINT "AND ";
5070 IF CENTS THEN PRINT USING"##";CENTS;:PRINT "/100 ";
5080 PRINT"DOLLARS"
5090 GOTO 5030
5100 REM RECURSIVE SUBROUTINE TO PRINT NUMBER AS WORDS
5110 DATA TWENTY,THIRTY,FORTY,FIFTY,SIXTY,SEVENTY,EIGHTY,NINETY
5120 DATA ONE,TWO,THREE,FOUR,FIVE,SIX,SEVEN,EIGHT,NINE,TEN,ELEVEN,
     TWELVE,THIRTEEN,FOURTEEN,FIFTEEN,SIXTEEN,SEVENTEEN,EIGHTEEN,NINETEEN
5130 IF X>999 THEN U=X-INT(X/1000)*1000:X=INT(X/1000):GOSUB 5100 :
     PRINT"THOUSAND ";:X=U
5140 IF X>99 THEN V=X:X=INT(X/100):GOSUB 5100 :PRINT"HUNDRED ";:X=V-X*100
5150 IF X>19 THEN PRINT B$(INT(X/10));" ";:X=X-10*INT(X/10)
5160 IF X THEN PRINT B$(X+9);" ";
5170 RETURN
```

Michael Sorens, 1414 Davidson Road, Abington, PA 19001.

Only Mitch Waite can take the basic building blocks of microcomputer knowledge and present them to you in such a friendly and enjoyable way. Get down to basics with Mitch Waite's PRIMER SERIES from Sams.

BASIC PROGRAMMING PRIMER, No. 21586, $11.95. A complete guide to BASIC, today's most widely used microcomputer language. By Mitch Waite and Michael Pardee.

COMPUTER GRAPHICS PRIMER, No. 21650, $14.95. This masterpiece by Mitch Waite shows you how to create graphics on your microcomputer video screen, including colorful drawings, plans, maps and schematics.

CP/M® PRIMER, No. 21791, $14.95. A non-technical discussion of the celebrated CP/M disk operating system for 8080 and Z-80 based systems. By Mitch Waite and Stephan Murtha.

MICROCOMPUTER PRIMER (SECOND EDITION), No. 21653, $14.50. This book is indispensable to the reader who wants to gain a solid understanding of microcomputer systems, from basic hardware through operating systems and user programming techniques. By Mitch Waite and Michael Pardee.

PASCAL PRIMER, No. 21793, $16.95. A complete, comprehensive introduction to one of today's hottest computer languages. By Mitch Waite and David Fox.

Learn the basics of microcomputers with Sams microcomputer books. With Mitch Waite's PRIMER SERIES, it's easy as ABC.

# A Pseudo Word Processor

***Bruno B. Wolff, Jr.***

After I had purchased a disk drive and Epson MX-80 printer, I thought, "How nice, now I can use my Apple to take care of my typing needs." It didn't take me long to find out that it was not as easy as it seemed when I first brought the printer home. I couldn't get lower case or do things like save partially done manuscripts.

There was another small problem: I had more or less shot my wad in getting the hardware so I really didn't want to bang down another stack of my hard earned cash right away for a word processor. I decided to write a program that would take me over the interim and let me do my writing and printing in the meanwhile. And so was born the pseudo word processor.

It is something of a disservice to the many good word processors around to dub this program with their generic name—maybe we should have called it a smart typewriter. Nevertheless, it does do a few useful things and really costs little to input and run. You may find it useful for simple correspondence or for uncomplicated reports.

The main menu lists 11 control commands and then asks for input of text. The control characters allow for a variety of options.

Control B lets you reset your tabs.

Control C aborts the session. Use this only for that letter of resignation you write every fifteen months or so since you may lose whatever you have in memory.

Control P issues a paragraph tab, a linefeed and return. The tab is set at the start of the run.

Return sends a return and linefeed. You should use this primarily for inserting blank lines inasmuch as the program automatically does a linefeed after 71 characters. You can keep typing until you run out of memory or decide to end the paragraph.

When you reach the last character in a line, the program looks back for the first space and puts characters after it into the next line. It doesn't clear the moved characters from the screen, but they are cleared from memory.

Control S will allow you to save your file to disk. The program asks you to name a file. Control L lists the control commands, which stay on the screen about fifteen seconds.

Control N puts you in an update mode to get a specific line to view it or change it. In the update mode you may enter a line number or issue a Control L to return to the main menu. If you input a line number, then the program offers you two options—Control L to redo a line or Control M to look at another line.

Control W writes to your printer. Depending on the kind of printer you have, you may have to make some adjustments before printing or change the program. Line 221 in the accompanying listing contains within the quotes a Control I followed by 80N, which is the command to the MX-80 to print an 80-character line.

Control R writes out your current file to disk. The program will ask for a name for the file.

Control A allows you to add lines in the middle of a document. Unlike real word processors, the pseudo requires whole lines to be entered. It does not reshape succeeding lines; it just pushes them back. You should pause a second or so while in the add mode when you start a new line. The program takes a little time to push the array back, which occurs right after you enter the first text character of an added line. If you add more than one line in this mode, the move back occurs at each new line.

Control T allows you to set a tab character other than the paragraph tab. This is nice for indented material.

Once in a while you will find that if there are too many onerrs, you have been tossed into limbo by Applesoft. If you find yourself in the monitor, type in 3D0G and hit return. You will be in Basic. Then type in GOTO 62, and you will get the master menu. Right then save your file and try to continue. If you still have trouble, Control C out and run again, calling in the saved file.

I'll be the first to admit that the pseudo is not going to give Wang or Muse or Apple pause for thought, but if you are on a limited budget, try it. You'll like it. □

Bruno B. Wolff, Jr., 2004 E. Kensington Blvd., Shorewood, WI 53211.

# Unlimited Additions

## from California Computer Systems and ASAP

When you want to expand your S-100 system, ASAP has the CCS additions you need. Controllers, RAMs, motherboards and mainframes — we can expand your S-100 system for nearly unlimited applications. And ASAPs prices make these boards an even greater attraction. Stop limiting your S-100 capabilities: Call today!

**16K Static RAM Board** — 200 nS RAMs, compatible with Alpha Micro, Cromemco and others. 16K memory divided into 4K blocks. Assembled and tested.
**Part Number 2116-03** ..... Price: $300.00

**32K Static RAM Board** — 200 nS RAMs, compatible with Alpha Micro, Cromemco and others. 32K memory divided into 8K blocks. Fully static 2114 RAMs. Assembled and tested.
**Part Number 2032-01** ..... Price: $595.00

**64K Dynamic RAM Board** — For 8080 and Z80 based S-100 systems. Provides processor-transparent refresh. 200 nS, 4MHz. Supports IMSAI-type front panels. Expandable. Assembled and tested.
**Part Number 2065-01** ..... Price: $550.00

**Z80A CPU Board** — 2 or 4MHz, switch selectable. 158 instructions, including 8080's 78 instructions for total 8080 software compatibility. 2K monitor ROM and RS-232-C port on-board. Assembled and tested.
**Part Number 2810-01** ..... Price: $270.00

**Floppy Disk Controller** — Controls up to four 5¼" and 8" drives in any combination. Double-sided and side-select signals for double-sided drives. Compatible with IBM 3740 and System 34 standards.
**Part Number 2422-01** ..... Price: $370.00
**CP/M™ Version 2.2 Free With Purchase**

**S-100 Mainframe** — 12-slot motherboard. Active termination on all bus lines. Built-in power supply, fan and circuit breaker. "Double path" trace pattern. Solder plated circuit area. Assembled and tested.
**Part Number 2200-01 (cream)** .. Price: $475.00
**2200-02 (blue)** ..... $475.00

**S-100 Motherboard** — 12-slot capacity using standard S-100 connectors. Capable of supporting CPU's at 4MHz and above. "Double path" trace pattern. On-board voltage regulator, with termination.
**Part Number 2501-01** ..... Price: $150.00

**4-Port Serial I/O Interface** — 4 individually-controlled asynchronous ports. Fully buffered inputs and outputs. Includes ROM circuitry for 2716 2K EPROM (user supplied). Ports meet RS-232-C interface specs. 3 control and 3 status registers per port.
**Part Number 2710-01** ..... Price: $285.00

**2-Serial, 2-Parallel I/O Board** —Fully buffered inputs and outputs. Includes ROM circuitry for 2716 2K EPROM (user supplied). Parallel ports have full four-line-per-port handshaking and 8-bit data transfer. Serial ports meet RS-232-C interface specs. Port A transmits and receives in asynchronous mode; Port B in either synchronous or asynchronous.
**Part Number 2719-01** ..... Price: $280.00

**4-Port Parallel I/O Board** — Three I/O ports and one output port. Seven bit status register. Fully buffered inputs and outputs. ROM circuitry for 2716 2K EPROM (user supplied). Ports provide 8-bit parallel data transfer; TTL-compatible.
**Part Number 2720-01** ..... Price: $195.00

**NEW ITEMS!**

**64K Bank Selectable Memory Board (200 nS)**
**Part Number 2066-01** ..... **Price: $740.00**

**Z80A CPU** — 4 MHz, 2 serial ports, 1 parallel port and DMA controls.
**Part Number 2820-01** ..... **Price: $455.00**

**6 Port Serial I/O**
**Part Number 2830-01** ..... **Price: $475.00**

ASAP also carries the full line of CCS boards for Apple II. Call for details.

**All prices subject to change without notice. Call for best price.**

ASAP offers a 30-day buyer protection policy: full money-back guarantee if not totally satisfied.

**Ordering Information:** name, address, phone, ship by: UPS or Mail. Call for shipping charge.

**Terms:** We accept cash, check, money orders, Visa & Master Charge (U.S. Funds only). Tax: 6% Calif. res. COD's and terms available on approval (school PO's accepted).

Toll free outside California:
**(800) 421-7701**
Inside California:

# WHY YOU NEED THE INSPECTOR.

If you're serious about programming, you need to set all your utilities together in one place — *inside* your Apple. The Inspector comes on an Eprom that simply plugs into the D8 socket, or on a disk ready to merge with Integer Basic for automatic loading on boot. Either way, it stays at your fingertips, ready to call without disturbing your current program.

The Inspector puts you in total control of both memory and disks. You can search forward and backwards, edit, read nibbles, map disk space, dump the screen to a printer, examine every secret of your Apple. Use The Inspector to repair blown disks, undelete files, input "illegal" commands, read and alter files, locate strings in memory or on disk. The uses are endless. The manual, alone, is an education. And it's always *there* when you need it.

You need the most powerful disk and memory utility available for your Apple. You need the Inspector.

See your local dealer, or order direct for just $49.95. Mastercard and Visa holders order toll-free, 1-800-835-2246.

Coming Soon!

# Maze Race

Daryoush Morshedian

Maze Race is a two-player car race for the PET.

It has been my observation that most car racing games that are designed for the Commodore/PET computers suffer from two weaknesses. First, they provide the player with only one track on which to race. This means that every time the game is played, the race is run on the same old track.

Second, most races are one-player games. This means that one can only race against time (which gets tiring after a while), not against another player. I don't know about you, but I find those games *very* boring and definitely not worthwhile.

Maze Race has neither one of the weaknesses mentioned above. The computer constructs a different maze (racing track) every time the game is played. It also constructs an identical maze at the righthand side of the screen for the other player. The first one who reaches his destination point, marked by (shift v) is the winner of the round. The overall winner is the first player who wins three rounds.

Maze Race also has a sound feature for PETs with a CB2 sound box.

The subroutine to draw the maze was taken from *Basic Computer Games* by David H. Ahl. □

# ARTWORX. IT'S A WHOLE NEW WORLD OF SOFTWARE.

*Scene from BETA FIGHTER during creation using the DRAWPIC graphics editor.*

**HODGE PODGE:** by Marsha Meredith (Atari and Apple)

NOW AVAILABLE FOR ATARI!!! This captivating program is a marvelous learning device for children from 18 months to 6 years. HODGE PODGE consists of many cartoons, animation and songs which appear when any key on the computer is depressed. A must for any family containing young children.
**PRICE** . . . . . **$19.95** diskette

☐ **PM EDITOR:** by Dennis Zander (Atari, 16K)
Create your own fast action graphics game for the Atari 400 or 800 using its player missile graphics features. By using player data stored as strings, players can be moved or changed (for animation) at machine language speed. All this is done with string variables (PO$(Y)=SHIP4). This program is designed to permit creation of up to 4 players on the screen, store them as string data and then immediately try them out in the demo game included in the program. Instructions for use in your own game are included. PM EDITOR was used to create the animated characters in **ARTWORX** RINGS OF THE EMPIRE and ENCOUNTER AT QUESTAR IV.
**PRICE** . . . . . **$29.95** cassette **$33.95** diskette

☐ **ROCKET RAIDERS** by Richard Petersen (Atari 24K)
Defend your asteroid base against pulsar bombs, rockets, lasers, and the dreaded "stealth saucer" as aliens attempt to penetrate your protective force field. Precise target sighting allows you to fire at the enemy using magnetic impulse missiles to help protect your colony and its vital structures.
**PRICE** . . . . . **$19.95** cassette **$23.95** diskette

☐ **FOREST FIRE!:** by Richard Petersen (Atari,24K)
Using excellent color graphics, your Atari is turned into a fire scanner to help you direct operations to contain a forest fire. You must compensate for changes in wind, weather and terrain. Not protecting valuable property can result in startling penalties. Life-like variables make FOREST FIRE a very suspenseful and challenging simulation. **PRICE** . . . . . **$16.95** cassette **$20.95** diskette

☐ **GIANT SLALOM:** by Dennis Zander (Atari, 16K)
Bring the Winter Olympics to your computer anytime of the year! Use the joystick to guide your skier's path down a giant slalom course consisting of open and closed gates. Choose from three levels of difficulty. Take practice runs or compete against from two to eight additional skiers.
**PRICE** . . . . . **$15.95** cassette **$19.95** diskette

☐ **THE PREDICTOR** by Thomas Barker (Apple, Atari, TRS-80, North Star and CP/M (M-BASIC).
This is a complete package that covers least squares fitting of parameters for two or more variables. THE PREDICTOR can be used for predicting sales and process behavior, trend analysis, model building and many other uses calling for multilinear regression techniques. Each option in the program is prompted with simple YES/NO commands making it ***very*** easy to use.
**PRICE** . . . . . **$29.95** diskette

☐ **PILOT:** by Michael Piro (Atari, 16K)
Pilot your small airplane to a successful landing using both joysticks to control throttle and attack angle. PILOT produces a true perspective rendition of the runway, which is constantly changing. Select from two levels of pilot proficiency.
**PRICE** . . . . . **$16.95** cassette **$20.95** diskette

☐ **TEACHER'S PET:** by Arthur Walsh (Atari, Apple, TRS-80,PET, North Star and CP/M (MBASIC) systems).
This is an introduction to computers as well as a learning tool for the young computerist (ages 3-7). The program provides counting practice, letter-word recognition and three levels of math skills.
**PRICE** . . . . . **$14.95** cassette **$18.95** diskette

☐ **MAIL LIST 3.0:** (Atari, Apple and North Star)
The very popular MAIL LIST 2.2 has now been upgraded. Version 3.0 offers enhanced editing capabilities to complement the many other features which have made this program so popular. MAIL LIST is unique in its ability to store a maximum number of addresses on one diskette (typically between 1200 and 2500 names!). Entries can be retrieved by name, keyword(s) or by zip codes. They can be written to a printer or to another file for complete file management. The program produces 1, 2 or 3-up address labels and will sort by zip code (5 or 9 digits) or alphabetically (by last name). Files are easily merged and MAIL LIST will even find and delete duplicate entries! The address files created with MAIL LIST are completely compatible with **ARTWORX** FORM LETTER SYSTEM.
**PRICE** . . . . . **$49.95** diskette

☐ **THE VAULTS OF ZURICH:** by Felix and Greg Herlihy (Atari, 24K, PET)
Zurich is the banking capital of the world. The rich and powerful deposit their wealth in its famed impregnable vaults. But you, as a master thief, have dared to undertake the boldest heist of the century. You will journey down a maze of corridors and vaults, eluding the most sophisticated security system in the world. Your goal is to reach the Chairman's Chamber to steal the most treasured possession of all: THE OPEC OIL DEEDS!
**PRICE** . . . . . **$21.95** cassette **$25.95** diskette

☐ **BRIDGE 2.0** by Arthur Walsh (Atari (24K), Apple TRS-80, PET, North Star and CP/M (MBASIC) systems)
Rated #1 by Creative Computing, BRIDGE 2.0 is the only program that allows you to both bid for the contract and play out the hand (on defense or offense!). Interesting hands may be replayed using the "duplicate" bridge feature. This is certainly an ideal way to finally learn to play bridge or to get into a game when no other (human) players are available.
**PRICE** . . . . . **$17.95** cassette **$21.95** diskette

☐ **ENCOUNTER AT QUESTAR IV:** by Douglas McFarland (Atari, 24K)
As helmsman of Rikar starship, you must defend Questar Sector IV from the dreaded Zentarians. Using your plasma beam, hyperspace engines and wits to avoid Zentarian mines and death phasers, you struggle to stay alive. This BASIC/Assembly level program has super sound, full player missile graphics and real time action.
**PRICE** . . . . . **$21.95** cassette **$25.95** diskette

## *NEW PROGRAMS!*

**HAZARD RUN:** by Dennis Zander (Atari, 16K)
The sheriff has spotted you and you must make the treacherous run through Crooked Canyon past Bryan's Pond to the jump at Hazard Creek and safety. You can even put the joystick-controlled GEE LEE car up on two wheels to make it through some tight spots. A lead foot is not always the answer as you dodge trees, rocks and chickens in this nerve-racking game. HAZARD RUN employs full use of player/missile graphics, re-defined characters and fine scrolling techniques to provide loads of fast action and visual excitement.
**PRICE**. . . . . **$27.95** cassette **$31.95** diskette

**BETA FIGHTER:** by Douglas McFarland (Atari, 16K)
See who will be the ace gunner in this action game set on a spectacular Martian landscape. BETA FIGHTER can be played with one or two players and uses player/missile graphics and delightful sound effects.
**PRICE**. . . . . **$16.95** cassette **$20.95** diskette

**DRAWPIC:** by Dennis Zander (Atari 16K)
DRAWPIC provides the user with an unbelievably easy way to create screens in graphics modes 3-7. Just sit back with your joystick and use POINT PLOT, DRAW LINE, RUBBER BAND fill and COLOR SET to create beautiful images on your Atari. Full or partial screen images are saved as string data in the program and can be instantly recalled and combined into new images using machine language subroutines. These graphic images can be easily incorporated into your own programs. The images of HODGE PODGE and the landscape of BETA FIGHTER were made using DRAWPIC.
**PRICE** . . . . . **$29.95** cassette **$33.95** diskette

**T: A TEXT DISPLAY DEVICE:** by Joseph Wrobel (Atari 16K)
T: is an auto-loading, co-resident assembly language routine which greatly expands the display capabilities of the Atari. It allows you to freely intermix both text and graphics without the use of modified display lists, PEEKS or POKES. This is done by defining a new device ("T:"); printing to that device puts text onto the screen. The size of the text is determined by the graphics mode used.
**PRICE**. . . . . **$17.95** cassette **$17.95** diskette

## *ORDERING INFORMATION*

***Call ARTWORX toll-free number to order direct:***
***800-828-6573***
*In New York, Alaska, Hawaii call:*
*(716) 425-2833*

***All orders are processed and shipped within 48 hours.***

# STARTING YOUR OWN MICROCOMPUTER BUSINESS

Starting your own microcomputer business is easy if you know the right steps to take. Two volumes of the new book **Your Fortune In The Microcomputer Business** describe the things you should know to start right and to build your business successfully.

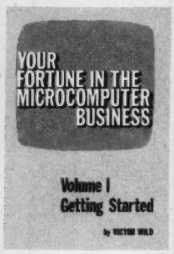
Many people have good ideas for a successful microcomputer business. But they don't know how to put their ideas into action. These people are plenty smart. That's not the problem. The problem is in knowing simple things: How to analyze the market. How to select the right product or service. How to get enough startup money. How to plan your growth and success.

The answers to these problems are not hard to understand. All you need is the right information. **Your Fortune In The Microcomputer Business** gives you the knowledge tools to start right, grow and prosper.

This practical reference manual has no hocus-pocus. It **does not** tell you how to do astrology or dating services. It **does** give you clear, complete, step-by-step instructions on how to get started right and insure your success!

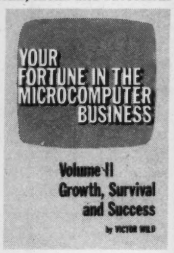
## Volume I Includes:

- The hottest trends in the market
- The seven best test markets
- How to read between the lines at a trade show
- 107 ways to reach your market
- Examples of the best ads in the business
- How to get free advertising
- The 21 steps to set up your business
- How to start a manufacturing business
- How to write a newsletter
- How to give a seminar
- How to start a service business
- How to package software for the mass market
- How to be a highly paid consultant
- Franchising—the good, the bad and the ugly
- Interviews with six successful microcomputer businesses
- How to use the RLC factor to be street smart, lean, mean and successful



## Volume II Includes:

- Strategies for growth
- Straight facts on incorporation
- How to build your organization
- How to manage cash flow
- How to develop your accounting system
- How to manage employees, wages and salaries
- How to survive a cash crunch
- What to do if things get really bad
- How to maximize your profits
- How to grow by acquisition
- How to value your business
- How and when to sell your business



**WRITE OR CALL—DON'T WAIT!**

**Wildfire Publishing, P.O. Box 420–DV**

# Now for adults.

## Textwizard™ transforms Atari into a powerfully serious word processor.

Textwizard™ is no kids game. It's a sophisticated and complete word processing program for the **Atari 800 computer.

Here is instant control over the creation, editing and formating of any writing. Insert words. Replace phrases. Delete sentences. Move paragraphs. Automatically repositions surrounding text. *Textwizard™ does it all with over 50 simple commands.

On your command, Textwizard™ will search out and correct mistakes throughout your document. And it protects you from common operating errors by warning you before you make them.

Textwizard™ will print out as many original "copies" as you need. In boldface, elongated or condensed lettering, upper or lowercase, with proportional spacing. And you can store your work on a diskette.

So, whether you write legal briefs, computer programs, or The Great American novel, Textwizard™ can make your work easier. And though it's no toy, it's fun to use.

At $99.95, you don't have to write a best-seller to afford Textwizard.™ Textwizard™ is another of the many creative products from Datasoft.

**Datasoft Inc.™**

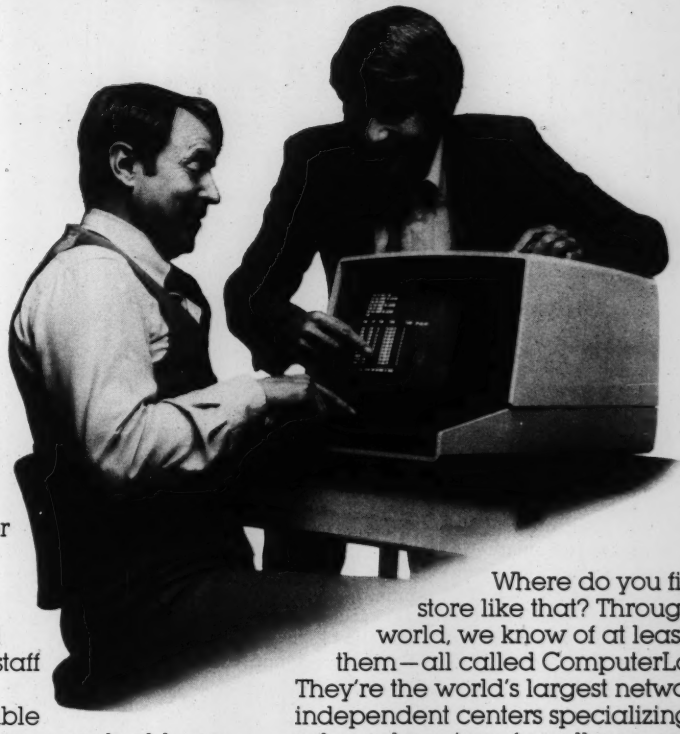
# The most important feature of a small computer?



It's who you buy it from. Because you don't just buy a computer—you buy a package. And it has to include a source for service, software, accessories, and expertise for as long as you own your computer.

That's why it's important to choose a store you know will be around that long. With a staff of professional computer experts. With the widest possible selection of computers, programs, and add-ons. And with the facilities and ability to perform in-store service and maintenance. Often while you wait.

Where do you find a store like that? Throughout the world, we know of at least 200 of them—all called ComputerLand. They're the world's largest network of independent centers specializing in the sale and service of small computers. And when you buy your computer from any one of them, *our* system is part of *your* system.

**ComputerLand®**

**We know small computers. Let us introduce you.**

Over 200 stores worldwide.
For locations call 800-227-1617 X118 (in California 800-772-3545; in Hawaii call 415-930-0777 collect).

# le cart...apple cart...apple

*Chuck Carpenter*

Several readers have asked about machine language entry points for hi-res graphics. By coincidence, an excellent source of the entry points showed up at just the right time. We'll feature the hi-res entry points in the column this month. As we have in previous columns, one-liners from readers will be included, as will the questions 'n answers section. I'll also discuss a new software utility which I think you will like.

**Hi-Res Entry Points**

Applesoft Basic includes several commands and statements for writing hi-res graphics programs. Most of the time programs using these commands are quite adequate. Many times though, the programmer wants a quicker response. To achieve this, you can take advantage of the machine language routines included in the ROMs in the Applesoft Basic Interpreter. That is, if you know where the routines are located in memory. (Note that the routines are in the same place if you have Applesoft loaded into a RAM card, too.)

The December '81 issue of the *Apple Assembly Line* newsletter solved the problem, and with the permission of Bob Sander-Cederlof of S-C Software, the hi-res entry information is paraphrased here. But first, some preliminary information for those of you who are new to machine language.

Chuck Carpenter, 2228 Montclair Pl., Carrollton, TX 75007.

**6502 Registers**

As you read through the descriptions of the hi-res routine memory locations and their use, you will see references to the A, X, and Y registers. These are internal 6502 microprocessor memory locations. These registers are used to process variables (data) during computing functions. The A register is the accumulator. The X and Y registers are called Index registers. As you will see in the descriptions, you must provide the values needed for the machine language programs to function. Your program must store the data in the appropriate register before the hi-res routine is called.

To better understand how this is done, a knowledge of machine language is required. Three tutorials have been included in this column, one in the May '80 issue and two in the November '80 issue. There are also many good books on the subject, including *Apple Machine Language* by Don and Kurt Inman and *6502 Software Design* by Leo J. Scanlon. Since the first one is Apple oriented, it is an excellent book for the machine language beginner. Now, let's look at the hi-res subroutines in the Applesoft Interpreter.

**Hi-Res Subroutines**

Table 1 is a list of the important locations used in page zero. These locations help keep track of what is going on during the computation process.

Table 2 shows the major entry points you can use for your hi-res machine language.

*Table 1.*

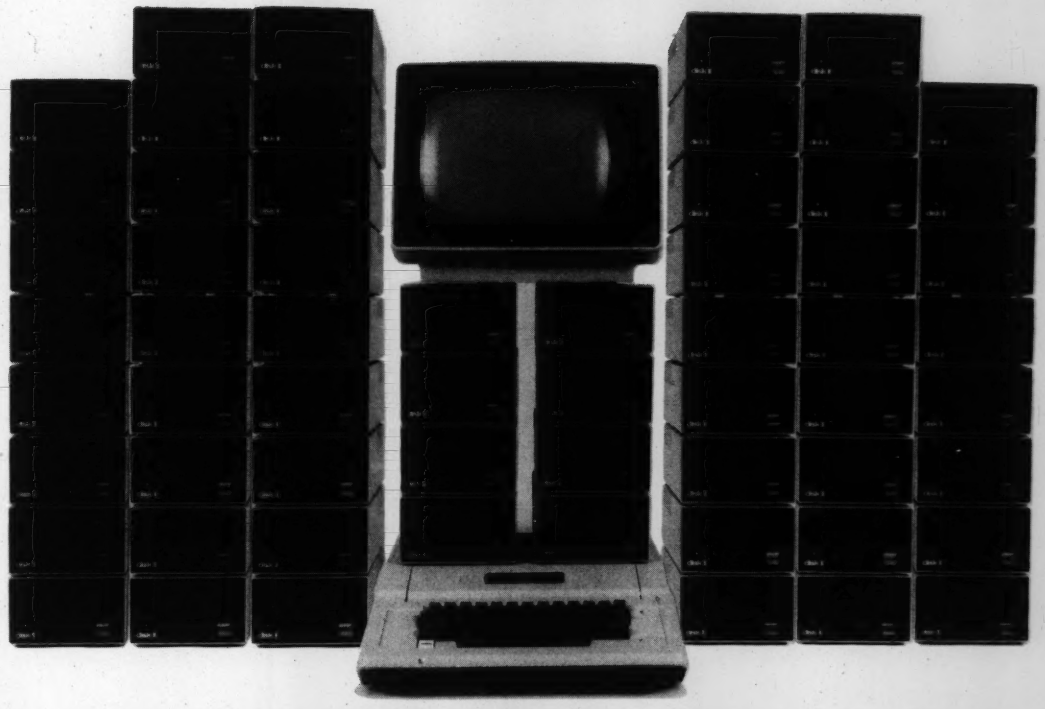
# SVA

## MAKING APPLES GROW



# THE BUSINESS POWER OF 60 MINI DISKS !!

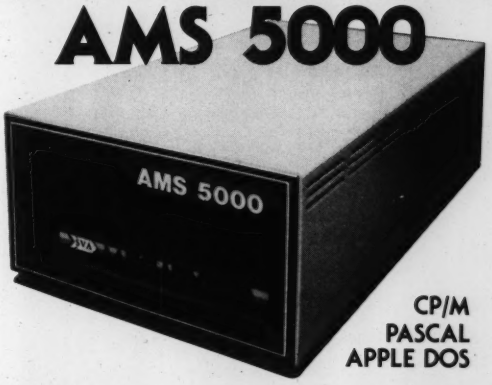
## MEGABYTER WINCHESTER DISK SYSTEM

## AMS 5000

Around the world and across the nation, business people and serious Apple II users are stepping up to SVA MEGABYTER SYSTEMS — Big storage at a low price.

Now the SVA AMS 5000 provides 5 to 10 megabytes of flexible and convenient on line data storage. This complete self contained 5" winchester disk drive memory system is attractively packaged and ready to run.

Imagine the power of accessing more than 60 mini disks simultaneously. And it's so easy to use you won't even know it's there. Most applications using the CP/M, DOS, PASCAL operating system will run on MEGABYTER systems.



**CP/M**
**PASCAL**
**APPLE DOS**

Rely on SVA for BACKUP data protection, archival data storage, and data transportability with the AMS 8000 MEGABYTER 8" floppy disk system. This system features high capacity removable media, IBM 3740 compatible, and may be used to transport data to other computers.

Preventative maintenance is not required for the AMS 5000. It's designed to operate continuously and is backed up by SVA's 6 month warranty with optional long term maintenance.

The best news of all is low price — A complete 5 Megabyte AMS 5000 MEGABYTER memory system is only — $3,339.

Enhance those large and complex applications with near instant program and data access — that means fast and convenient operation of accounts receivables or payables, inventories, medical data, insurance billings, etc. Increase Data Base performance with the superior large file accessing capability of the AMS 5000. Call SVA today for expert application assistance.

To order your AMS 5000, call SVA today or contact your Apple dealer. Look to SVA for a growing line of Apple Memory System products. . . . SVA means business!!

*Table 2.*

| | | |
|---|---|---|
| HGR2 | $F3D8 | Initializes and clears hi-res page 2. |
| HGR | $F3E2 | Initializes and clears hi-res page 1. |
| HCLR | $F3F2 | Clears the current hi-res screen to black. |
| BKGND | $F3F6 | Clears the current hi-res screen to the last plotted color (from $1C). |
| HPOSN | $F411 | Positions the hi-res cursor without plotting a point. Enter with (A) = Y-coordinate, and (Y,X) = X-coordinate. |
| HPLOT | $F457 | Calls HPOSN and tries to plot a dot at the cursor position. If you are trying to plot a non-white color at a complementary color position, no dot will be plotted. |
| HLIN | $F53A | Draws a line from the last plotted point or line destination to (X,A) = X-coordinate, and (Y) = Y-coordinate. |
| HFIND | $F5CB | Converts the position of the hi-res cursor's position to X- and Y-coordinates; stores X-coordinate at $E0-E1 and Y-coordinate at $E2. |
| DRAW | $F601 | Draws a shape. Enter with (Y,X) = the address of the shape table, and (A) = the rotation factor. Uses the current color. |
| XDRAW | $F65D | Draws a shape by inverting the existing color or the dots the shape draws over. Same entry parameters as DRAW. |
| SETHCOL | $F6EC | Sets the hi-res color to (X), where (X) must be between 0 and 7. |

### One-Liners

This month, we have two one-liners from one of our junior programmers. The programs are hi-res and are shown in Listings 1 and 2. The first one draws random triangles in random colors with sound. The second draws random lines in random color. My guess is that Mike was experimenting when these programs were written.

One note about typing one-liners. Enter the text of the program without spaces. Some of the programs have too many characters after being listed. The Basic Interpreter inserts spaces to make the program easier to read. Often the extra spaces make the program too long for direct entry. As you may recall, only 255 characters can be typed into the keyboard input buffer, but if you leave out the spaces, an apparently too long program will fit in the buffer.

A couple of one-page programs were sent to me too. They are called one-pagers because the entire program fits on the screen when listed. Since I had an extra

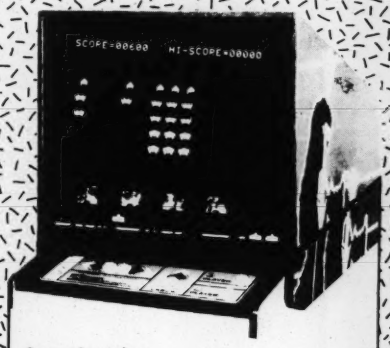
# THE creative computing software ARCADE

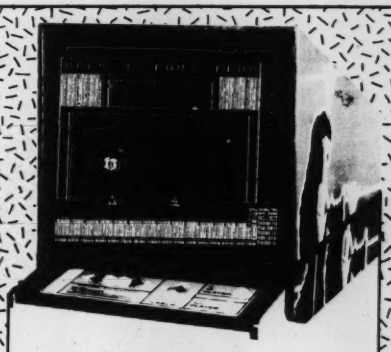


**Super Invasion**
Apple II (requires paddles)
licensed from Astar International
48K Diskette DOS 3.3 CS-4505 $19.95
16K Cassette CS-4006 $19.95
Sorcerer 16K Cassette CS-5011 $19.95
by Matt Hickey

This is the original arcade game, with superb high resolution graphics, high speed action, nail biting tension, and hilarious antics by the moon creatures. Fifty five aliens whiz across the screen, quickening their descent, challenging you to come out from behind your blockades and pick them off with your lasers before they bomb you, destroy your shields, or drop down right on top of you.

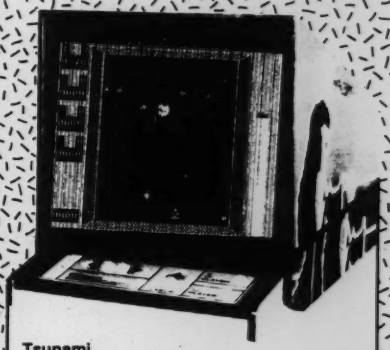
**Super Invasion** by John Varela
32K TRS-80 Model I Diskette CS-3520 $19.95
16K TRS-80 Cassette CS-3020 $19.95

A low resolution, high speed arcade game similar to our Apple and Sorcerer versions. The aliens move back and forth across the screen, dropping ever lower to attack you as you attempt to destroy them with your lasers.



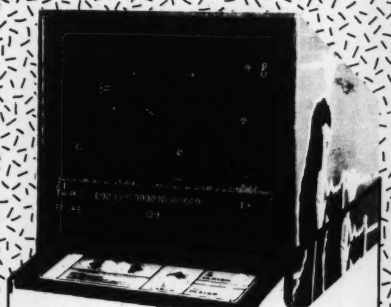
**Blisterball** and **Mad Bomber**
By Rodney McCauley
Apple II 48K Diskette DOS 3.3 (requires paddles) CS-4511 $24.95

A frantic, fast paced romp that can be played for hours, **Blisterball** is the first truly original arcade-type game for a home computer. As the bouncing balls drop from above, the player moves his laser base and tries to shoot them. It's easy at first—with just one ball. Then come two, then three. It's getting harder. Four balls come, and finally five. Surviving them, the player gets to shoot at inelastic bonus balls. If he makes it this far, the second round starts. The balls bounce lower, the walls close in. Shades of Poe and Newton! Making Superb use of Apple graphics and sound, **Blisterball** can be played by one or two people. **Mad Bomber**, included on the same disk, is another fast paced arcade game. Racks of bombs fill up above you. Whenever four bombs are in any rack, they start to fall. You can shoot them either in the rack or while they are falling, but since there are racks all across the top of the screen, you need to stay ahead of them to survive.



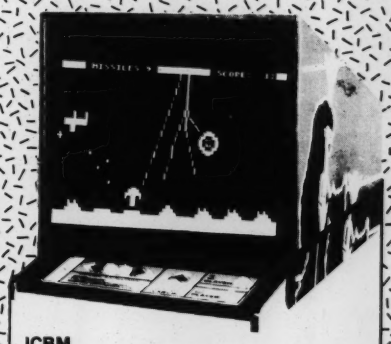
**Tsunami**
by Rodney McCauley
Apple II 48K Diskette DOS 3.3 (requires paddles) CS-4526 $29.95

Wave after wave of alien attackers attempt to overwhelm your defenses. Each wave comes in a different formation and uses different attack and defense strategies. You get dozens of superior arcade games combined into one program. If you ever master the first set of games on the diskette, where the attackers are without shields, then you are ready for the second set. This time the attackers are sheltered by shields. They can drop bombs right through the shields, but you cannot shoot through them. Successive waves use different strategies. Some move from shield to shield, allowing you to shoot while they are in between. Others just come out briefly to attack, and you must have fast reflexes to get them. Bonus points are awarded for beating the clock, with a countdown timer displayed on screen. This may be our finest arcade game ever!



**Torax**
by Erol Pekoz
Apple II 48K Diskette DOS 3.3 (requires paddles) CS-4520 $24.95

Defend your home planet against the invading Torids! Try to protect your nuclear fuel tanks, which the aliens are intent on stealing. The Torids drop down, steal a fuel tank and rise up to escape. They are also armed, and will not hesitate to shoot at you. While you whiz by the surface of your planet at incredible speed, you must avoid enemy fire, maneuver your ship, and try to shoot down the Torids without hitting the fuel tanks!



**ICBM**
Audio visual licensed from Atari, Inc.
32K TRS-80 Model I Diskette CS-3521 $19.95
16K TRS-80 Cassette CS-3021 $19.95

TRS-80 version of the popular arcade game where you must destroy incoming missiles with your own anti-ballistic missiles before they destroy your cities with nuclear warheads.

Apple II is a registered trademark of Apple Computers Inc.
TRS-80 is a registered trademark of Radio Shack.
Sorcerer is a registered trademark of Exidy Systems.

day off because of an ice storm, I decided to enter the programs and include them here (remember the January '82 cold wave). Both are very interesting programs. I think you will especially enjoy the lo-res graphics program in Listing 4.

Listing 3 is an adaptation of the lo-res kaleidoscope program in the original Apple II Reference Manual. This book, known as the Red Book, included several Integer Basic programs, a couple of which were interesting games using lo-res graphics. This program is an interesting adaptation of the old lo-res program. The program runs very slowly, so give it plenty of time. The patterns that are developed are worth the wait. Bring your camera and take pictures.

How many Apple II Plus owners know about Integer Basic? If you have the Integer Card or a RAM card, I'm sure you have used Integer Basic. The language is the original Apple language and was developed for games and educational applications. It runs much faster than Applesoft for most applications—especially graphics programs.

The program in Listing 4 was written in Integer Basic and the results are fascinating. One of the features of the program is that it switches pages. That is, while you are looking at one page, a new display is being developed on the other. All of a sudden the display changes when the pages are switched. The process then continues on the other page. Fascinating!

When you first run the program, it displays two lines of text. Follow the instructions, set LOMEM and then type the GOTO. Now sit back and watch the display. It takes several seconds to get started, so give it a chance. I used my green-screen monitor and the results were very good, but it is much better viewed in color. If you would like to use this program in Applesoft you will need to change the INT statements. Otherwise the program should run properly. I'm not going to say what it does. Type it in and run it; you'll like it.

## QUESTIONS 'N ANSWERS

Frequently, readers write to me and ask questions about all sorts of Apple related things. (Even about Apple and IBM!) The questions are often specific; something the individual reader is interested in. Other times the questions are general in nature and concern topics of interest to many readers. The questions asked most often are about connecting printers, adding on-line storage, and using RAM cards.

### About Printers

Basically, printers come in two types. There are Receive Only (RO), and Keyboard Send/Receive (KSR). Generally, a KSR printer will have a keyboard attached to the printer. You can use the printer to send and to receive. An RO printer will only receive the data sent to it. Since there is no keyboard, RO printers are often more compact.

There are also serial printers and parallel

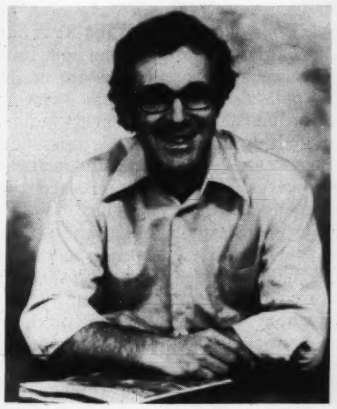
A REMARKABLE MAGAZINE



David Ahl, Founder and
Publisher of Creative Computing

# creative computing

***"The beat covered by Creative Computing is one of the most important, explosive and fast-changing."—Alvin Toffler***

You might think the term "creative computing" is a contradiction. How can something as precise and logical as electronic computing possibly be creative? We think it can be. Consider the way computers are being used to create special effects in movies—image generation, coloring and computer-driven cameras and props. Or an electronic "sketchpad" for your home computer that adds animation, coloring and shading at your direction. How about a computer simulation of an invasion of killer bees with you trying to find a way of keeping them under control?

**Beyond Our Dreams**

Computers are not creative per se. But the way in which they are used can be highly creative and imaginative. Five years ago when *Creative Computing* magazine first billed itself as "The number 1 magazine of computer applications and software," we had no idea how far that idea would take us. Today, these applications are becoming so broad, so all-encompassing that the computer field will soon include virtually everything!

In light of this generality, we take "application" to mean whatever can be done with computers, *ought* to be done with computers or *might* be done with computers. That is the meat of *Creative Computing*.

Alvin Toffler, author of *Future Shock* and *The Third Wave* says, "I read *Creative Computing* not only for information about how to make the most of my own equipment but to keep an eye on how the whole field is emerging.

*Creative Computing*, the company as well as the magazine, is uniquely lighthearted but also seriously interested in all aspects of computing. Ours is the magazine of software, graphics, games and simulations for beginners and relaxing professionals. We try to present the new and important ideas of the field in a way that a 14-year old or a Cobol programmer can understand them. Things like text editing, social simulations, control of household devices, animation and graphics, and communications networks.

**Understandable Yet Challenging**

As the premier magazine for beginners, it is our solemn responsibility to make what we publish comprehensible to the newcomer. That does not mean easy; our readers like to be challenged. It means providing the reader who has no preparation with every possible means to seize the subject matter and make it his own.

However, we don't want the experts in our audience to be bored. So we try to publish articles of interest to beginners and experts at the same time. Ideally, we would like every piece to have instructional or informative content—and some depth—even when communicated humorously or playfully. Thus, our favorite kind of piece is acessible to the beginner, theoretically non-trivial, interesting on more than one level, and perhaps even humorous.

David Gerrold of *Star Trek* fame says, "*Creative Computing* with its unpretentious, down-to-earth lucidity encourages the computer user to have fun. *Creative Computing* makes it possible for me to learn basic programming skills and use the computer better than any other source.

**Hard-hitting Evaluations**

At *Creative Computing* we obtain new computer systems, peripherals, and software as soon as they are announced. We put them through their paces in our Software Development Center and also in the environment for which they are intended—home, business, laboratory, or school.

Our evaluations are unbiased and accurate. We compared word processing printers and found two losers among highly promoted makes. Conversely, we found one computer had far more than its advertised capability. Of 16 educational packages, only seven offered solid learning value.

When we say unbiased reviews we mean it. More than once, our honesty has cost us an advertiser—temporarily. But we feel that our first obligation is to our readers and that editorial excellence and integrity are our highest goals.

Karl Zinn at the University of Michigan feels we are meeting these goals when he writes. "*Creative Computing* consistently provides value in articles, product reviews and systems comparisons . . . in a magazine that is fun to read."

**Order Today**

When you order an introductory subscription to *Creative Computing*, you'll save as much as 33%. One year (12 issues) costs $19.97—20% off. Two years go for $36.97, or 26% off. And three years cost $49.97—a 33% saving. All savings are based on the full one-year subscription price of $24.97.

Foreign orders: Add $5 a year for Canada. Add $10 a year (cash payment in U.S. currency only) for all other countries outside U.S. and possessions.

Please allow 30 to 60 days for delivery of your first issue. We guarantee your complete satisfaction or we will refund the full amount for all the unmailed issues remaining in your subscription.

To order, make your check payable to *Creative Computing* and mail it to the address below—*today!*

CIRCLE 280 ON READER SERVICE CARD

printers available in both types. You can use some serial printers as-is, without any control signals other than the data lines. Other serial printers require handshaking, a term used to describe the way in which the computer and printer talk to each other. Parallel interface printers include handshaking as part of the computer-to-printer connections.

The DEC LA-34 is a KSR serial printer that does not require handshaking. You can use the Apple II High Speed Serial Interface Board with this printer, for instance. The LA-34 will print at 300 baud (30 characters per second), but runs as fast as 45 characters in the catch-up mode, after a carriage return.

The LA-34, since it is KSR with an RS-232 serial interface, can also be used with a modem to talk directly to a host computer. You can take advantage of the wide printing width to see output as it would be printed on an 80-character screen. You will use a great deal of paper, however. Be aware too, that you must switch the transmitted data and received data lines when a printer is used with a modem. Normally, these lines are pins 2 and 3 in the standard 25-pin connector.

Other serial printers can accept data at much higher speeds. For instance, my Epson MX-80 with a serial adapter, runs at 1200 baud (and will run as high as 9200 baud). The print head can't run at this speed, so the input buffer must tell the computer when it is full of characters. At this time the handshaking signals tell the computer to stop sending. When the buffer is cleared, another signal is sent to start the data again. Note that in this mode, it is of no advantage to send the data any faster than the print head can move.

If you have a system that allows spooling or buffering of data during the print cycle, the high speed transmission is more important. You can keep the spooling operation from loading other computing functions with higher transmission speeds. At least one manufacturer is making a card that will let you print and do other functions at the same time. Some word processors provide this capability too. Both functions slow down since the microprocessor must handle both functions. The faster the print buffer is filled, the sooner other functions are taken care of.

There are several serial interface cards on the market now which include handshaking. Since even the standard RS-232 serial interface allows many handshaking options, make sure the interface card and the printer are compatible.

Parallel printers, on the other hand, send the data as fast as the computer can send it all the time. Handshaking is built into the parallel interface. But not all parallel interfaces are the same.

My MX-80 and Centronics 737 are both parallel RO printers. The parallel card used for the 737 will not work with the MX-80. Manufacturers have tended to use the phrase "Centronics-compatible" but some are "more" compatible than others. Again, there are many parallel interface boards on the market now. Make sure the interface board works with the printer that you want to use.

**About Disk Drives**

Several companies are making expansion drives for the Apple system. Among these are Sorento Valley Associates (SVA), Vista, and Micro-Sci. The first two are offering controller cards and software for expansion to 8" drives. Micro-Sci claims to have 5 1/4" expansion drives and software for the Apple.

My experience has been only with SVA, a company which has a good reputation. With their controllers you can add up to 4 megabytes of on-line storage capacity in floppy drives. This capacity is provided through double-sided, double density controller capacity.

SVA has also announced controllers for 8" and 5 1/4" fixed (or rigid) drives. The software on the 8" system is integrated with DOS 3.3. You can have both the Apple controller card and the SVA controller card in the system at the same time.

The other two companies are new in the Apple disk drive business. Vista has been around a while, but I am not familiar with their products. Vista has announced a controller and Apple compatible software for 8" drives. The system is reported to be very much like the SVA units.

Micro-Sci started about a year ago and had problems. They advertise a 40-track drive and a 70-track drive. Software was reported to be the major problem by those with whom I have discussed the products. The 40-track drive does not offer much in the way of additional capacity. With the 70-track unit, you get about 1/4 megabyte of storage—about as much as a single-sided 8" disk. As I learn more about these disk drive memory expansion systems, I will keep you informed.

**About RAM Cards**

Adding a RAM card to the Apple brings us in a complete circle. Now you can "softload" many languages and utilities into addressable memory occupied by ROM. A few years ago, the rage was to have a computer that had the programming language in ROM. When you turned on the power, the language was ready to use immediately. Of course, if you had to load programs from tape, you could understand why programs in ROM were so desirable. Now, with fast access disk drives, the more flexible softload capability has gained popularity.

Apple's Language System included the first RAM card that I know of. It is part of the package you get when you buy Pascal. Several other manufacturers offer 16K RAM cards, most of which are quite similar to the Apple RAM card. You can load Integer Basic, Applesoft Basic, Pascal or Fortran, or use the Z-80 Softcard with them. The units have switches in software and hardware to connect or remove them from the memory circuits.

One supplier has a unit that has its own memory refresh circuits on it. This means that you don't have to remove any of the RAM chips on the main Apple board. However, my feelings are uneasy here; the logic is good, but there is always the possibility that refresh will occur at the wrong time. I prefer those boards which get their refresh timing from the same circuits the main Apple memory does.

Newer RAM boards now have capacities of 32K, 64K, and 128K bytes of memory. With this kind of capacity you could store the total contents of an Apple disk in RAM. In fact, that is the claim made for these memory giants. Other possibilities include

**ADVENTURES!!!**

**16 K COLOR 80 or 8KOS1.** These Adventures are written in BASIC, are full featured, fast action, full plotted adventures that take 30-50 hours to play. (Adventures are interactive fantasies. It's like reading a book except that you are the main character as you give the computer commands like "Look in the Coffin" and "Light the torch.") $14.95 each.

**ESCAPE FROM MARS** (by Rodger Olsen)

This ADVENTURE takes place on the RED PLANET. You'll have to explore a Martian city and deal with possibly hostile aliens to survive this one. A good first adventure.

**PYRAMID** (by Rodger Olsen)

This is our most challenging ADVENTURE. It is a treasure hunt in a pyramid full of problems. Exciting and tough!

**OS1 only TINY COMPILER OS1 only**

The easy way to speed in your programs. The tiny compiler lets you write and debug your program in Basic and then automatically compiles a Machine Code version that runs from 50-150 times faster. The tiny compiler generates relocatable, native, transportable machine code that can be run on any 6502 system.

It does have some limitations. It is memory hungry – 8K is the minimum sized system that can run the Compiler. It also handles only a limited subset of Basic – about 20 keywords including FOR, NEXT, IF THEN, GOSUB, GOTO, RETURN, END, STOP, USR(X), PEEK, POKE, -, =, *, /, , <,> , Variable names A-Z, and Integer Numbers from 0-64K.

TINY COMPILER is written in Basic. It can be modified and augmented by the user. It comes with a 20 page manual.

TINY COMPILER–$19.95 on tape or disk. OS1.

## QUEST

**QUEST** – A NEW IDEA IN ADVENTURE GAMES! Different from all the others. Quest is played on a computer generated map of Alesia. Your job is to gather men and supplies by combat, bargaining, exploration of ruins and temples and outright banditry. When your force is strong enough, you attack the Citadel of Moorlock in a life or death battle to the finish. Playable in 2 to 5 hours, this one is different every time.

16K COLOR-80 OR TRS-80 or 12KOS1. $14.95.

**ARCADE AND THINKING GAMES**
**16K COLOR 80 or 8KOS1**

**TIME TREK, REAL TIME REAL GRAPHICS TREK.** See the torpedoes fly and Klingons explode. No more scolling displays, no more turn taking. – This one has real time and real displays. In BASIC – for 16K level II or extended color BASIC. $14.95.

**SPACE ZAPPER.** Protect your central starbase from alien ships by zapping them first. High res, high speed graphics, right out of the arcades. $14.95 – 16K Extended or 32K Disk Basic for Color 80 ONLY!

**BATTLEFLEET** – This grown-up version of Battleship is the toughest thinking game available on 80 computers. There is no luck involved as you seek out the 80's hidden fleet. This is a topographical toughie. $9.95.

**SLASHBALL** – A two player game of strategy and skill, this is like nothing you have ever seen before. This takes fast fingers, quick wits and concentration. Playable from age 6 to 65, it is a good family game. $9.95.

**LABYRINTH** – 8K OS1 or 16K EXTENDED COLOR BASIC – With amazing 3D graphics, you fight your way through a maze facing real time monsters. The graphics are real enough to cause claustrophobia. The most realistic game that I have ever seen on either system. $14.95.

*Please specify system on all orders*

**This is only a partial listing of what we have to offer. We have arcade and thinking games, utilities and business programs for the OS1 and TRS-80 Color. We add new programs every week. Send $1.00 for our complete catalog.**

**AARDVARK - 80**

**OS1** **2352 S. Commerce, Walled Lake, MI 48088** **TRS 80 COLOR**

**(313) 669-3110**

**CIRCLE 101 ON READER SERVICE CARD**

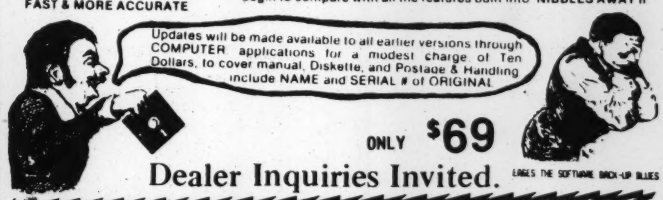
## NIBBLES AWAY II

THE ULTIMATE NEW AND IMPROVED DISK BACKUP SYSTEM

**NIBBLES AWAY II**, second edition, is a greatly enhanced and improved version of our earlier product NIBBLES AWAY. Many new and exciting features have been implemented in **NIBBLES AWAY II** to insure 'State of the Art' reliability.

Other similar systems on the market today (regardless of price) can't begin to compare with all the features built into **NIBBLES AWAY II**.



Updates will be made available to all earlier versions through COMPUTER applications for a modest charge of Ten Dollars, to cover manual, Diskette, and Postage & Handling. Include NAME and SERIAL # of ORIGINAL.
ONLY $69
ERASES THE SOFTWARE BACK-UP BLUES

**Dealer Inquiries Invited.**

## Mr. Lister

– Customer Contact Profiler & Mailer

A Super Mail List Plus more – up to 1000 Entries on single 3.3 Disk (only 1 Drive required) – 2 second access time to any name – full sort capabilities – Dual Index Modes – supports new 9 digit Zip. Easy to follow manual – Not Copy Protected – 4 user defined tables with 26 sort selections per table – Beta tested for 6 months – user defined label generation.

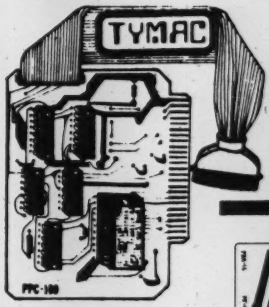
INTRODUCTORY PRICE ~~$129~~. $99.00 Dealer & Dist. Inquiries Invited.

## Super PIX HIRES SCREEN DUMP

The Software package that will allow your printer to dump page 1 or page 2 of the Apple Hires screen horizontally or vertically. Use with EPSON® MX-80 with or without GRAFTRAX® Roms, MX-70 – OKI® Microline 80, 82, 83, 82A, 83A – C. ITOH® 8510 and NEC 8023A. Requires Tymac Parallel Printer Board PPC-100, MX-80 Version $39. all others . . . . .$24.95

**201 839-3478**

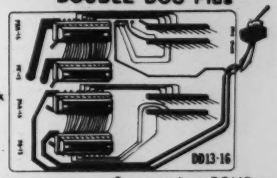
# hardware



**PARALLEL PRINTER CARD**

A Universal Centronics type parallel printer board complete with cable and connector. This unique board allows you to turn on and off the high bit so that you can access additional features in many printers. Use with EPSON, C.ITOH, ANADEX, STARWRITER, NEC, OKI, and other with standard Centronics configuration. **$139**

**DOUBLE DOS Plus**



**DOUBLE DOS Plus**—a piggyback board that plugs into the disk controller card so that you can switch select between DOS 3.2 and DOS 3.3

Nothing needs to be soldered, just plug in and go. Since all four ROMS are used, all software will work, the ROMS fit on the back of the board allowing full use of slot #7. One set of ROMS is powered up at a time.

DOUBLE DOS Plus requires APPLE DOS ROMS **$39.00**

**THE APPLE CARD**—Two sided 100% plastic reference card. Loaded with information of interest to all Apple owners $3.98

## 3D Robot Tank

Fast Machine Language 3D Hires Animation Arcade game with sound. Look out of your turret and try to blast the enemy tanks and saucers.

3D Animation adds to the effects and use of the game paddles or joystick give you command of your tank. **ONLY $29.95**

**MICRO-WARE DIST. INC.** P.O. BOX 113 POMPTON PLAINS, N.J. 07444

**CIRCLE 200 ON READER SERVICE CARD**

## Apple Cart, continued...

moving DOS (the disk operating system) into this area of memory. You can get an additional 10K bytes of main memory for your programs this way. Note that the software must be compatible with DOS for these things to work properly.

A technique called bank switching is used to access a particular 16K section of the additional RAM memory. Addresses are used as bank switching registers. When a switching register is called, the appropriate 16K section is selected, and the programs stored there run accordingly. With just one 16K section, the usual result is to switch ROM with RAM. The result is similar to having Applesoft resident in ROM on the Apple main board, and an Integer Basic card in slot zero. You can switch one or the other on with the hardware switch, or make the switch with a software call. Most of the software available these days has the intelligence to make the analysis during boot time. That's how the master disk knows whether to load the non-resident language into a RAM card if it is installed in slot zero.

### A Fast-Load Utility

Speaking of fast loading memory, a new utility called Universal Boot Initializer (UBI) will do this for you. As I mentioned above, loading programs from tape was sometimes agonizingly slow. When Applesoft was first available, it took 1.5 minutes to load it from tape. The same program takes 20 seconds from a disk. Now with UBI, you can load your system with the non-resident language in less than five seconds. Actually, if you measure only the one time it takes to load a RAM card, the time is less than two seconds.

UBI is a product of S&S Software, Box 5, Manvel, ND 52856. The utility is designed to provide the software developer or end user with universal boot capability. This means you can load DOS 3.2.1 or 3.3 from the same disk. In addition to the copy protected utility disk, the package includes a thorough training disk and a manual to help configure your own personal boot disk. Examples of single and dual language possibilities are included too, for a total of four sides of software.

There was only one thing I didn't like about the utility. You can't directly add the capability to an existing disk. However, once you initialize a blank disk, you can use a file transfer utility like FID on DOS 3.3 to move files from a slow boot disk to a UBI initialized disk.

The well organized manual includes more than most people want to know about how the utility works. In addition to the sections on customizing your own boot disk, the manual tells you how the UBI came about, and includes a complete section on how to copy the universal boot disk.

Because of a problem that occurs when you include both DOS 3.2.1 and 3.3 on the same disk, they become difficult to copy. The manual suggests ways to overcome the problem, including the FID method, and use of a bit copier.

Warranty and replacement policies are quite liberal. Defective disks are replaced at no charge within 30 days. User damaged disks are replaced for $15 with return of the original disk. A back-up copy of the original disk is available for $10 with return of the warranty card.

For the software developer, a software licensing agreement is available. The individual end-user does not need a license. UBI also includes a directory formatting capability. However, additional software is required to create the customized catalog.

The disks that I use frequently have been modified with UBI. I have been delighted with it since I first saw the prototype model in July '81. If you have felt that two-stage booting was more than you needed at times, then you will enjoy the fast-load, single-step capability offered with the UBI. The price is $49.95 plus $3 postage and handling. The phone number is (701)696-2574. □

# Complete line of MECC software for Apple computers now available...

creative computing software

# Educational Excellence

**Excellent educational software is the exception rather than the rule.**

Excellence in educational software. It's not easily achieved.

Many large publishers have entered the computer software business. Many have flopped. Why? Because producing good software is not the same as producing a textbook.

### Tough Criteria

Good educational software must meet specific objects in the teaching/learning process. It must motivate and hold the attention of the students. It must not bore the gifted students nor be over the heads of slower students. It must be "user friendly" to both the teacher and student. And it must be accompanied by clear support material, worksheets and all the material necessary to use it effectively.

A tall order.

But one which MECC has met.

The Minnesota Educational Computer Consortium (MECC) was founded in 1973 with the goal of extending the benefits of computers to every school in the state. Over the years, MECC has developed procedures for finding and perfecting programs from contributors throughout the state.

### Few Programs Qualify

Before a program is accepted for the MECC library it is judged on specific criteria. For example:

1) Accuracy...Is all spelling and grammar correct? Does each question provide for a correct and appropriate response?

2) Audience...Is the intended audience (grade level and subject) served by the degree of difficulty and scope of the program? Is the reading level of the text material suitable?

3) Clarity...Are explanations and instructions sufficient, clear and straight forward? Is the presentation well-formatted?

4) Graphics...Are the graphics appropriate and sufficient in quantity?

Other criteria include documentation, function, programming, and the like. Similar criteria are applied to the documentation. This insures that the reading level is appropriate, that objectives are well-stated and that associated materials are available.

What this all means is that the educational software packages from MECC are among the best available anywhere. They are pedigogically sound, thoroughly tested and well documented.

Now the MECC software library is available to both schools and individuals through Creative Computing Software.

MECC software is currently available only on disk for the Apple II. All disks run under DOS 3.2 and require a minimum of 32K memory and Applesoft in ROM or an Apple II Plus.

Software using a printer uses the Apple serial, parallel or communications card.

**Apple Demonstration Diskette**
MECC-701, $19.95

A sample of the different kinds of applications available on the MECC diskettes is shown. The software demonstrates applications in drill and practice, tutorial, simulation, problem solving, and worksheet generation. Samples from music, science, social studies, industrial arts, reading and mathematics are provided.

**Elementary—Volume 1 (Mathematics)**
MECC-702, $24.95

The first elementary diskette contains programs to be used in the elementary mathematics classroom. Games of logic such as BAGELS, TAXMAN and NUMBER, drill and practice programs, such as SPEED DRILL, ROUND, and CHANGE, and programs about the metric system such as METRIC ESTIMATE, METRIC LENGTH, and METRIC 21 are included on the diskette.

**Elementary—Volume 2 (Language Arts)**
MECC-703, $24.95

The teacher can enter lists of spelling words in the computer and have them used by the program SPELL, which drills students on the spelling. MIXUP which presents the word in mixed up order, or WORD FIND, which will create a word find puzzle for the teacher to duplicate. If words and definitions are entered, a CROSS WORD puzzle can be generated or a WORD GAME can be played. Two other programs included on this diskette are TALK, a program designed to introduce students to the computer or AMAZING which prints out worksheet mazes. Several programs on this diskette use a printer.

**Elementary—Volume 3 (Social Studies)**
MECC-704, $24.95

The sell series, SELL APPLES, SELL PLANTS, SELL LEMONADE and SELL BICYCLES which appears on the ELEMENTARY VOLUME 3 diskette can be used to teach elementary economics to students in grades 3-6. CIVIL will re-enact battles of the CIVIL war while STATES and STATES 2 provide drill and practice on the location of states in the U.S. and their capitals.

**Elementary—Volume 4 (Mathematics And Science)**
MECC-705, $24.95

Two mathematics programs ESTIMATE and MATHGAME provide reinforcement on estimating and basic facts. Food chains in fish can be studied through ODELL LAKE while ODELL WOODS deals with food chains in animals. SOLAR DISTANCE teaches the concepts of distances in space and URSA provides a tutorial on constellations.

**Elementary—Volume 5 (Language Arts)**
MECC-719, $24.95

ELEMENTARY—VOLUME 5 deals with the reading concept of prefixes. The diskette contains five lessons which both teach the prefixes of UN, RE, DIS, PRE, and IN. Two review drills, DRAGON FIRE and PRE-APP II, are also contained on the diskette.

**Elementary—Volume 6 (Social Studies)**
MECC-725, $24.95

Historical simulations, OREGON, VOYAGEUR and FURS are included in the ELEMENTARY—VOLUME 6 diskette. Along with these programs are NOMAD which teaches map reading and SUMER, a simulation of ancient Sumeria.

**Special Needs—Volume 1 (Spelling)**
MECC-727, $24.95

This diskette is designed to drill handicapped students on frequently misspelled primary and intermediate words. Students answer problems by either using the game buttons, the game paddles or any key on the keyboard.

**Science—Volume 2 (Senior High)**
MECC-709, $24.95

Many of the programs on this diskette were developed by Minnesota teachers. PEST, which deals with the use of pesticides, and CELL MEMBRANE, in which the user takes the part of a cell membrane, can be used in biology classes. SNELL plots light refraction demonstrating SNELL's law while COLLIDE simulates the collision between two bodies. Diffusion deals with the diffusion rates of various gasses. NUCLEAR SIMULATION shows radioactive decay of nine different radioisotopes. ICBM and RADAR teach angles and projections on a coordinate system.

**Science—Volume 3 (Middle School)**
MECC-707, $24.95

The FISH program through the use of low resolution graphics shows the circulatory system of a fish. Simulations like ODELL LAKE which is used to explore food chains, URSA which teaches about constellations, and QUAKES which simulates earthquakes are on the diskette. MINERALS can be used in the area of earth science to identify 29 minerals by having students perform simple tests.

**Mathematics—Volume 1 (Senior High)**
MECC-706, $24.95

BAGELS, SNARK, ICBM, and RADAR will teach students logic while reinforcing the concepts of plotting prints or angle measurements. ALGEBRA provides a drill and practice in solving equations. Three programs on the diskette can be used in plotting equations on a grid: SLOPE which is designed for use in ninth grade with linear functions, POLYGRAPH which will plot any equation on a rectangular coordinate system, and POLAR which graphs functions on polar coordinates.

**Aestheometry—Volume 1**
MECC-716, $24.95

Aestheometry teaches the topic of curves by viewing curves from two perspectives. The first method demonstrates the "space concepts" of elliptical, parabolic, and hyperbolic curves. Curve sketching designs are developed to provide an aesthetic view of geometric shapes. The second method uses a mathematical approach and defines a curve as the intersection of planes with a cone. The support booklet provides worksheets and classroom ideas.

**Teacher Utilities—Volume 1**
MECC-715, $24.95

The TEACHER UTILITIES diskette is designed to aid the teacher and would not be used by the student unless the teacher creates questions using the REVIEW program. This program allows the teacher to set up a list of questions which can be used either by the REVIEW program or the TEST GENERATOR program. The teacher can also make CROSSWORD puzzles, WORD FIND puzzles, BLOCK LETTER banners and POSTERS using this program. FREQUENCY and PERCENT can be used to calculate grades and to do statistical analysis. A printer is needed for some of the programs on this diskette.

**Programmer's Aid—Volume 1**
MECC-720, $32.95

The PROGRAMMER'S AID diskette provides help for the programmer. Programs to be able to UPLOAD and DOWNLOAD to the MECC system, programs that work with text files including FP TO TEXT, RANDOM EDITOR, SEQUENTIAL EDITOR, and TEXT LIST along with programs to work with binary files, BINARY FILE INFO, BINARY FILE TO FP are included. Two programs TABLES and MERGE allow the user to create, change and merge graphic shapes for use in a program. FREE SPACE will tell the amount of space on the diskette while HIDDENCHARACTERS will locate control character. STARTER will put standard routines such as space bar, music, graphic characters or input into a user's program which is just being created or already created.

**MICAS—Volume 1** MECC-721, $49.95

Microcomputer Integrated Computerized Accounting System requires dual disks and 132 characters width printer. The MICAS computerized accounting system provides a realistic experience with automated accounting systems. The package consists of four integrated systems: (1) general ledger, (2) accounts payable, (3) accounts receivable, and (4) inventory control.

**Shape Tables—Vol. 1** MECC-724, $24.95

The SHAPE TABLES diskette includes 12 files of 187 shapes than can be incorporated in a user's program. Also included are aids needed to work with shape tables.

**Order Today—Prices effective through September 15, 1982.**

Order in confidence at no risk. All MECC software is covered by an unconditional 30-day money-back guarantee from Creative Computing Software.

To order software packages, send payment* indicated plus $3.00 postage and handling to Creative Computing, Dept. C0626, One Park Avenue, Room 458, New York, N.Y. 10016. Orders may also be charged to your Visa, MasterCard or American Express account—by mail include credit card name, number and expiration date, or if you prefer, use our 24-hour toll free number, 800-631-8112. In N.J. only 201-540-0445. Institutional purchase orders should include an additional $1.00 billing fee.

*NJ residents add 5% sales tax.

Order MECC software today for the highest quality and best value in educational software available anywhere.

# outpost: atari

**David and Sandy Small**

This column marks the one year anniversary for Sandy's and my series in *Creative*; we're looking forward to the next year and have a good deal to write about.

Usually we spend some time in a tutorial in these columns; this month we will discuss the Atari in terms of overall design philosophy.

This last year also marks a period of incredible growth for the Atari computer. The Atari Program Exchange got going and is now shipping a large volume of Atari software. This exchange provides low-cost but relatively high quality software written by outside users.

Last year at this time there was no *Jawbreakers, Asteroids,* or *Missile Command*; now these programs are being surpassed (Have you seen *Mouskattack* yet? The cover art alone is worth the purchase price.)

Last year we had the Basic and Assembler cartridges, neither of which was designed for speed or for large programs. Now we have Microsoft Basic, the awesome new Editor/Macro Assembler, Pilot, Forth, Lisp, and according to a letter I just received, Algol.

The tools to develop high quality software are now available; and it is a safe bet that more good software will be appearing on the market.

Outside manufacturers are also producing a wide variety of hardware for the Atari. There are several modems available, one of which I will review shortly (the direct-connect Microconnection).

David and Sandy Small, 11314 Yucca Drive, Austin, TX 78750.

There is also a good deal of hobbyist-oriented equipment, such as EPROM burners, I/O port connectors, and whatnot, and a light pen is now available from non-Atari sources.

Percom Corp. in Texas is now marketing an entire line of Atari-compatible single, double and quad density disk drives, and other companies have introduced Winchester drives. Atari has even published a list of outside vendors of software and hardware for their machine.

And did I mention the news that Atari has surpassed Apple in sales? And rumors of new Atari machines are currently flying (something may be announced in June, I am told). This machine is here to stay, and will continue to grow for quite some time.

**What Is an Atari?**

If you own an Atari, you may be curious to learn what you have bought. I searched long and hard for a definition of what Atari has produced; "home computer" is too vague. After all, it does have a specific and limited place in the market. For example Atari dropped the 815 double density dual disk drive when it did not conform to their definition of a "home computer."

The definition I finally found, is a "home computing appliance." Chew on those words for a while; they contain the essence of the design and marketing strategy of the Atari. This is a second-generation consumer-oriented machine, carefully designed and oriented towards the home market from the ground up.

Atari is not in the business market. They have no intention of competing with Tandy, Apple, and IBM, who are currently beating their respective heads together trying to capture that field. Atari stands with Texas Instruments in the home computer marketplace with a strategy of aiming at the home user.

Products designed for home use—principally games, home finance, and education/development—are released and pushed hard. Pilot offers a good example of the educational potential of this machine, and the games available for the Atari are becoming the standard for the home computer industry.

Bear in mind also that this is a consumer machine. It is not designed for a hardware or computer professional. It is designed for an average person who wants a "home computing appliance."

It is not as hardware oriented as the Apple. It doesn't have a collection of open "slots" on the various busses available. What housewife seeking help with her checkbook honestly cares whether or not she can access the interrupt request line with a plug-in card?

The layout is for a consumer. The machine is attractively styled, and goof-proof. Memory and the Operating System are packaged in cartridges located under the front cover, and joysticks plug in easily under the front keyboard.

Many of the programs available can be used by a consumer with little knowledge of computers; they plug in on ROM cartridges (most four-year old kids I know can master this trick), and the system Reset key is protected against accidental press, and so on.

ATARI

**ATARI IS A REGISTERED TRADEMARK**

**CIRCLE 240 ON READER SERVICE CARD**

I remember being told that "The Atari isn't a serious machine because it doesn't offer PASCAL." I have heard this sort of complaint many times, always directed at something the Atari lacked, be it Cobol, Fortran-1933, or whatever. The people who voice these objections (in most cases, computing professionals) don't understand that the Atari home computer is Atari's very serious attempt to make a computer that a home user can get along with—not necessarily a programmer, just a home user. It may not have the current languages that are in vogue today (and possibly gone tomorrow). But this is by design and not by default.

So, while the Atari may not at first glance *look* like a powerful computing machine, with lots of lights, integrated circuits, and cables all over the place, it is. It has just been designed for a home computer user according to Atari's idea of who the home computer user is.

Oh, and yes, Pascal is now available for the Atari.

### GTIA Demonstration Programs

As of January 1982, Atari began shipping all Atari 800 units with GTIA graphics chips. The GTIA chip replaces the CTIA graphics chip and allows three more graphics modes. Don't worry, the operating system ROM and the Basic cartridge were written with GTIA in mind. GTIA is a superset of the CTIA functions.

Several short demonstration programs for the GTIA exist. I don't know where they were written, but I would assume somewhere at Atari by someone with a preliminary GTIA chip.

Below are several listings of sample GTIA programs. Users with CTIA graphics chips can try these programs, but don't expect spectacular results. Users with GTIA chips will be in for a pleasant surprise, indeed.

Feel free, as always, to modify them, and if you come up with a really neat effect, I'd appreciate a listing or a disk/tape (I'll return your disk/tape, of course.) The address appears at the beginning of the column.

By the way, if the author of these programs would care to step forward, I will certainly give him credit. I would like to know who wrote them. □

**Special editions for Apple, Atari and TRS-80 Computers.**

# Programming is Child's Play

Hey kids, are the folks out of the room? Good, 'cause I've got a secret to tell you. You know that computer they fuss over? Well, kid, between you and me, this whole programming thing is a lot simpler than they realize.

What's that? Sure, you can learn. Just get a copy of **Computers For Kids.** It's a super book, and it tells you everything you need to know. Huh? You have an Apple? No problem. There's a version just for the Apple. One for the TRS-80 and one for the Atari too, with complete instructions for operating and programming.

The book will take you through everything programmers learn. Its easy to understand and the large type makes it easy to read. You'll find out how to put together a flowchart, and how to get your computer to do what you want it to do. There's a lot to learn, but **Computers For Kids** has 12 chapters full of information. You'll even learn how to write your own games and draw pictures that move.

Just so the folks and your teachers won't feel left out, there's a special section for them. It gives detailed lesson ideas and tells them how to fix a lot of the small problems that might pop up. Hey, this book is just right for you. But you don't have to take my word on that. Just listen to what these top educators have to say about it:

Donald T. Piele, Professor of Mathematics at the University of Wisconsin-Parkside says, "**Computers For Kids** is the best material available for introducing students to their new computer. It is a perfect tool for teachers who are learning about computers and programming *with* their students. Highly recommended."

Robert Taylor, Director of the Program in Computing and Education at Teachers College, Columbia University states, "it's a good idea to have a book *for chidren*."

Not bad, huh? Okay, you can let the adults back in the room. Don't forget to tell them **Computers For Kids** by Sally Greenwood Larsen cost only $3.95. And tell them you might share it with them, if they're good. Specify edition on your order: TRS-80 (12H); Apple (12G); Atari (12J).

To order your copy send $3.95* plus $1.00 postage and handling to Creative Computing, Dept. C0629, One Park Avenue, Room 458, New York, N.Y. 10016.

*NJ Residents add 5% sales tax

## EDUCATIONAL SOFTWARE
### For the ATARI 400/800 Computers

**WORD SEARCH PUZZLE MAKER**—Make word search puzzles with your words or ours and an 80-column printer. **24K Cassette: $19.95 24K Disk: $24.95**

**MATHFAKS**—Reviews simple math facts in the four arithmetic operations. Uses color and sound. Connects to an optional printer or Votrax Type-N-Talk. **16/24K Cassette: $19.95 24/32K Disk: $24.95**

**CONCENTRATION**—The matching game that is fun for all. Use our subjects or yours. Uses joysticks and the new Symtec Light Pen for the ATARI. (Also available.) **16K Cassette: $24.95 24K Disk: $29.95**

**ELECTRONIC GRADEBOOK**—The teacher's aid for grade reporting. Includes weighted scores, letter and number grades, and several methods of reporting grades. Disk version has more advanced routines. **$49.95 ea.**

All programs come with a manual. Disk versions come with AUTORUN.SYS file.

Please add $2 postage and handling per order. Michigan residents add 4% sales tax.

# Can you improve excellence? We can.

## By adding our Memotech Memopak to the excellence of the ZX81, we have achieved perfection.

The growth of interest in computer use caused by the introduction of the Sinclair ZX81 has made new and exciting demands on the ingenuity of electronic engineers. At Memotech we have focused our attention on the design of inexpensive, reliable memory extensions.

The Memopak is a 64K RAM pack which extends the memory of the ZX81 by a further 56K. The new memory extensions are designed to be within the price range expected by Sinclair users. It plugs directly into the back of the ZX81 and does not inhibit the use of the printer or other add-on boards. There is no need for an additional power supply or leads.

**Increase your memory.**
The Memopak together with the ZX81 gives a full 64K, which is neither switched nor paged, and is directly addressable. The unit is user transparent and accepts such basic commands as 10 DIM A(9000).

0-8K . . . Sinclair ZX81 ROM
8-16K . . . This section of memory switches in or out in 4K blocks to leave space for memory mapping, holds its contents during cassette loads, allows communication between programs, and can be used to run assembly language routines.
16-32K . . . This area can be used for basic programs and assembly language routines.
32-64K . . . 32K of RAM memory for basic variables and large arrays.

With the Memopak extension the ZX81 is transformed into a powerful computer, suitable for business, leisure and educational use, at a fraction of the cost of comparable systems.

**Free service on your Memopak.**
Within the first 90 days, should anything go wrong with your Memopak return it to us and we will fix or replace it free of charge.

**Try Memopak with no obligation.**
You can use our Memopak in your home without obligation. After 10 days, if you are not completely satisfied, simply return it for a full refund.

**MEMOTECH**

**Memotech Corp.**
**7550 W. Yale Ave.**
**Suite 220**

## Will Fastie

When I finally sit down to write this column, usually only milliseconds away from my deadline, I don't necessarily know what the theme will be. I know, I know, I promised displays this month. My intention was to fill the column with technical details about the IBM display technology. But a combination of letters from readers and some brief thought of my own has changed my mind.

The only thing that the letters from my readers have in common is that they don't have anything in common. Until this month, that is, during which several of them asked precisely the same thing: How can a graphics screen be dumped to an Epson MX100 printer?

Now that may seem like a very technical question, requiring much detail. But what do you really have to know in order to accomplish this? If you have your MX100 technical manual and your IBM Basic manual, you have all the information you need to write the program.

The people who wrote simply need that tip, and maybe a little example to get them started. They don't need to know how the graphics card works, where the video memory is, or anything like that.

Then I suddenly realized that those owners who cared enough about the really low-level details of the IBM Personal Computer would invest in the Technical Reference Manual. At least, they should. Is there any reason for me to propagate those same details here?

You tell me. Tell me what's important to you, what you need to know, what you want to learn, and I'll try to accommodate. If it really is the deep technical detail, that's fine. For the moment, I'm assuming it isn't, and that you would rather hear about new developments and products, especially software.

Sooo...this month I have another collection of more or less independent topics *and* I even have something about displays.

### Out on a Limb

Two questions I am frequently asked are: Which Personal Computer operating system will become dominant? And when will the 8087 become available? Let me indulge in some speculation.

There are three announced operating systems for the IBM Personal Computer. The only one available so far (press time) is IBM's DOS (aka MS-DOS or SB-86, equivalent (?) to 86-DOS). The UCSD P-system was due in April, and CP/M-86 has not yet been announced as an available product. I have heard some rumors that the Pick operating system will be available for the IBM, and many of us expect XENIX, from Microsoft, to pop up in the near to middle future.

The real question is which OS the owners of the computer will have. Software manufacturers will build their programs to fit whatever harness is the standard. (Schick makes razor blades that fit Gillette razors.) The standard will be whatever is most readily available, and it's hard to believe that anything other than IBM DOS will dominate, primarily because its price is only $40.

Marketing efforts by Microsoft and Lifeboat Associates increase the pressure. Lifeboat's decision to market SB-86 was surprising; as the world's leading supplier of CP/M software, CP/M-86 seems a more consistent choice for them.

The UCSD P-system from Softech Microsystems is, in my mind, a viable choice. Unlike CP/M-86, programs written in the P-system do not require the buyer of the software to own the operating system. The software routines required to make a P-system program operate correctly can be delivered directly to the customer.

The catch here is that a royalty for those "run-times" is required, and this will in turn mean that the price of software packages written in the P-system will be higher. As a result, the P-system, although attractive to the software developer for reasons of application portability, will only be practical for the more expensive applications.

CP/M-86, on the other hand, will suffer because of its higher price. No price has been announced, but I can't imagine that it will be $40. And if IBM DOS and CP/M-86 are compared, it rapidly becomes obvious that 95% of the applications could be handled with either system.

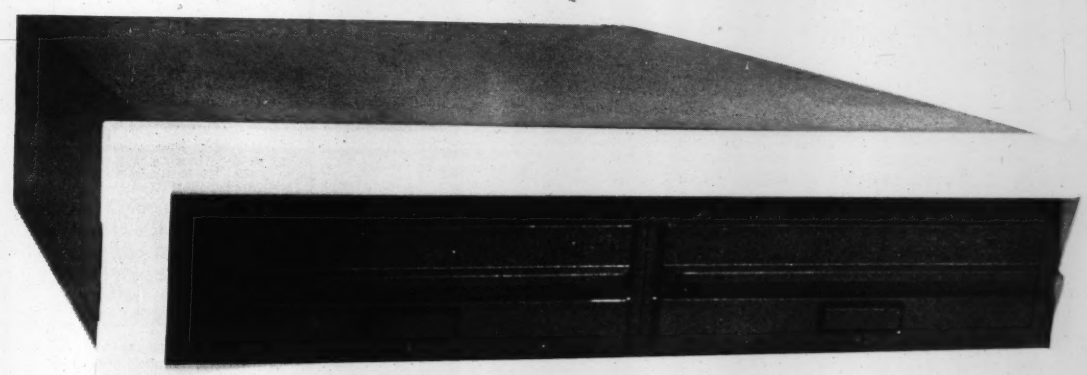
Not only that, a new add-in device has been announced for the IBM which makes CP/M-80 (that's right, the 8-bit CP/M) available on the Personal Computer (see below). There will be some pressure for CP/M-86 from software suppliers writing

W.H. Fastie, 7110 Sheffield Rd., Baltimore, MD 21212. Correspondence can only be acknowledged when a stamped, self-addressed envelope has been provided.

# • ANNOUNCING •
# CI 1220

TWO MEGA-BYTE FLOPPY DISK SYSTEM FOR LSI-11 BASED SYSTEMS
DUAL DRIVE — DOUBLE DENSITY — DOUBLE SIDED

- DEC RX02/RX01 COMPATIBLE
- COMPATIBLE WITH LSI 11/2 OR LSI-11/23
- DUAL WIDTH DMA CONTROLLER
- BOOTSTRAP, DIAGNOSTICS PROVIDED, RACK MOUNT ENCLOSURE
- 3 MONTH WARRANTY, PARTS AND LABOR



TWO MEGABYTES FOR LESS THAN THE PRICE OF ONE.

The CI 1220 is completely compatible with DEC operating systems using DEC RX03 protocol and DEC standard DY handler. Compatible with RX01/RX02 media, IBM 3740 format. Dual width controller operates at +5VDC @ 2.7A supplied from LSI-11 backplane and is compatible with any Shugart interface floppy drive.

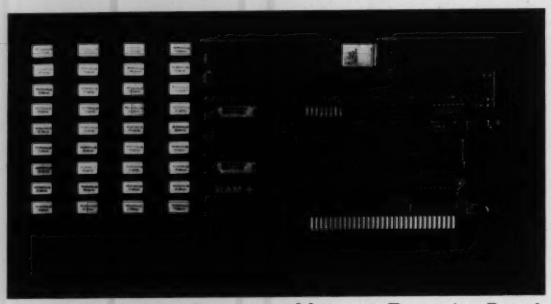

*Photo 1a. Seattle Computer Memory Expansion Board.*

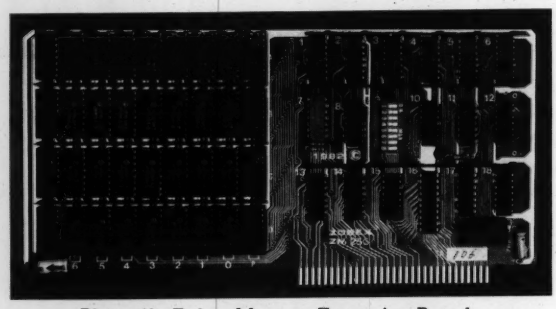

*Photo 1b. Zobex Memory Expansion Board.*

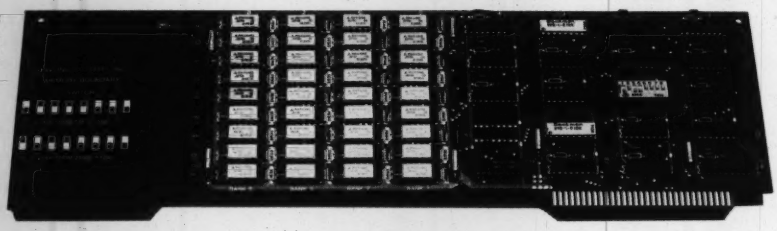

*Photo 1c. Davong Systems Memory Expansion Board.*

in Compiler Systems' CBasic because it is not available in IBM DOS, but I don't know how much market pressure this represents. I have been told the number of programs is significant.

As for the Intel 8087 Numerics Processor, I just don't know. My pet theory is that IBM will announce an upgrade for existing machines that will include the 8087 and a new set of ROMs with both a BIOS and a Basic that know how to take advantage of the power of the 8087. That might be followed by upgrades to the other language systems, and VisiCalc could be a big beneficiary.

How real is this? Beats me. Even though I have compared the system board schematics with the 8087 data sheet and verified that the pinouts are the same, IBM has nothing—absolutely nothing—to say on the subject. We can only assume IBM knew what they were doing when they mounted that extra socket on the board.

**The Infamous Slot Guide**

Remember when I complained because there weren't guides in all the options slots in the system unit? And remember my discovery that one of my display boards was warping? I finally got satisfaction.

IBM in Boca Raton (thank you, Jeanette) sent along a "Card Support Guide," IBM part number 8529156. IBM said that from now on, the guide would be packaged with cards that are long enough to benefit from one. The guides can be ordered from IBM in Greencastle, IN, or through your local dealer.

Once my guide was installed, I found it much more difficult to insert the adapter card. However, the board is supported very well now, which was the original objective.

**Memory Expansion Boards**

I have mentioned memory boards before because I think they are important products for the IBM Personal Computer. The obvious reason is the expanded function that can be obtained, particularly with VisiCalc (I think version 2 is now available from VisiCorp (nee Personal Software)), but also with Basic and the Macro Assembler. IBM Pascal, of course, requires the memory expansion.

A less obvious reason is the concern that the IBM memory board is inherently less reliable, something that several dealers have mentioned to me, but which is difficult for me to validate. The best reason is that all these memory boards offer four times the capacity of the IBM board, occupy only one slot, and use less power.

I have learned of several more boards. Photo 1a shows the board from Seattle Computer, 1b shows Zobex's offering, and 1c the Davong Systems product. Other boards are available from AST Research, and CRC Personal Computer Products.

The Seattle board is the most interesting because it includes not only 64 to 256K of memory but also one RS-232 serial port. So far, this is the most creative board I have encountered. The port is claimed to be compatible with the IBM port except that it does not include the current loop option.

The smallest board, with 64K RAM and the port, costs $475, and includes 27 empty sockets for expansion kit RAM chips. The largest board is 256K and costs $1075. A dealer friend of mine has certified the board and is selling it, and says the quality is good. (He thinks the Datamac board has the best quality.) I certainly rate this board a "slotsaver."

The Zobex board is a 256K board for $998. I know little more than that. Zobex claims that a unique addressing scheme allows each 64K segment on the board to be addressed individually, allowing each segment to be physically located at any 64K-byte boundary in the memory space.

Davong sells their 64K board for $395, 192K for $845, and 256K for $1075. Their press release did not say whether the board included parity, but the photograph shows four rows of nine chips each, which means that parity is there. Davong boards are interesting for price at the low end, as are the Quadram boards I mentioned last month, but I would check with them to see if parity is an option or not.

AST Research offers a 64K board for $495, 128K for $745, 192K for $995, and

256K for $1145. The board supports parity, and they also offer a 64K upgrade kit for $145. Note that the 64K board plus upgrades is less expensive than the assembled version. I have found this to be true from most vendors. You have to decide whether you are willing to bypass the vendor's checkout procedure. The AST product brochure has a nice touch—it is sized to fit in IBM-sized binders, and is even punched.

CRC Personal Computer Products offers 64K to 256K boards in 64K increments priced from $488 to $1336. They also offer a smaller board starting with 16K bytes at $261 and ending with 64K at $433 in 16K increments. Their ad said "parity available," which made me think it was optional. I haven't talked with them yet.

**Covers!**

Some time ago I mentioned that the lack of covers for the computer was a serious problem. Three companies have emerged with products.

The first is TecMar, the company that also makes a long list of devices for the IBM Personal, including the only expansion chassis that I know of. Their covers come in a set with four pieces. There is a keyboard cover, a printer cover, a display and system unit cover, and a cover for the TecMar expansion chassis that can also fit a system unit. The set costs $42. They are made of translucent vinyl plastic.

The second company is CompuCover, which manufactures covers and has over 300 items in their product line. They make five different covers: keyboard ($7.95), system unit ($12.95), Monochrome Display ($9.95), system unit plus display (one cover, $15.95), and printer ($9.95). A set consisting of the keyboard and combination system unit/display covers sells for $19.95. The covers are made of cloth-backed vinyl and are available in either saddle tan or black. Robert Helms, President of CompuCover, told me that the covers are highly anti-static and very strong, and would last longer than the computer.

The third company is Cover Craft. I haven't seen their covers yet, so I can't comment.

The big reason to be concerned about anti-static materials is that they attract less dust. So far, my CompuCover covers have stayed relatively dust-free while the TecMar covers have collected enough to show a trace if I swipe them with my finger. Some dust has collected inside the TecMar covers. Either set has kept my system much cleaner than it previously was.

Both sets of covers seem to be constructed reasonably well. The TecMar system unit and display cover fits very well, but the keyboard cover doesn't. The CompuCover covers fit well, especially the keyboard cover which is like a glove, but the system unit and display cover combination does not have a full back. Although this is okay from the standpoint of protection (it's the disk drive that needs the cover most), a snug fit is not possible. Bob Helms said CompuCover would change the cover pattern if they had enough requests, but that so far he had received no complaints.

**Software**

Software for the IBM Personal Computer is beginning to appear. I don't think I will regularly list everything I find out about, but there is so little now that I can afford to. Most of what I know comes from press releases, so I can't vouch for anything yet. As I get some of these packages I'll relay my impressions.

I should first mention a tool. A company named Telecon Systems has developed a C language compiler for the IBM. They have apparently developed a C family which can run in RT-11, RSX-11, SDOS, FLEX, and CP/M and generate code for PDP-11, 8080/8085/Z80, and 6809 instruction sets. The IBM version runs in a 64K IBM DOS environment. The compiler emits assembly language source code, so an assembler for the target machine is required. Telecon claims compatibility with UNIX V7 and the Kernighan/Ritchie "standard" description ("The C Programming Language"). The compiler costs $350 and the object code can be sold without royalty obligation to Telecon.

This brings up an interesting point. At press time, no one I know had received a copy of the IBM Macro Assembler. IBM announced the program for February, and I have to admit that as I write, it is still February. Just barely, though, so it does appear that IBM is having some trouble getting its software out. I don't really understand why.

Interesting because the first vertical package I have seen is Ampersand Corporation's Branchbanker IRA Marketing Module. The program enables financial institutions to produce various Individual Retirement Account projections and analyses, and is designed to be used during face-to-face interviews with potential IRA customers. Ampersand sells a complete hardware and software configuration for $4600; I did not get the price for just the software.

Westico, The Software Express Service, has announced two products. The first is called ASCOM, and is a communications program for "users who need to interact with remote time sharing services or local computers to transfer data files and programs." The program has been available for other machines and was converted to the IBM. It costs $175. The other offering from Westico is MicroGANTT, a project planning system. I have no details. The price is $395, and the reference manual alone is $25.

Starware has announced the Mail Manager, a mailing system with sorting, selection, and printing features, which claims to be very friendly. The price is $49.

A data management system called TIM III has been announced by Innovative Software, Inc. It is the first piece of IBM Personal software I have actually seen from a third party software vendor, although I have yet to try the system. The price is $495.

Basic Business Software, Inc., has announced five packages. They sound very interesting—I'm going to try to get them. They are Common Basic Programs (76 programs from the Osborne book, $35); Finance Calculator ($30); Amortization and Depreciation ($30); Plotting ($75) which plots a file of data points on a printer; and IBM Basic Utilities ($75). This last includes a Basic cross reference program, printer program, mini-text editor, and subroutines for matrix manipulation, file searching, and others. If the cross reference program is any good, it could be worth $75.

**Baby Blue**

The most interesting announcement was made by a new company named Xedex on February 17. The device is called the Baby

*"Of course I look different. I'm computer enhanced."*

## The Best Medicine

Your program is finally finished. You type RUN. Your computer replies READY. It has just eaten five hours of your life. What do you do?

Try to maintain your sense of humor—reach for *The Colossal Computer Cartoon Book*. Laugh at the original adventures of Edu-Man. Chuckle at cartoons by *Creative Computing* favorites Sandy Dean, Harbaugh, Swan, and Johns. Smile sympathetically at the ways others have suggested to get even with the infernal machines.

*The Colossal Computer Cartoon Book* contains hundreds of clever cartoons to tickle the funny bone of anyone who has ever loved or hated a computer.

To order send $4.95* plus $3.00 postage and handling to Creative Computing, Dept. CO62D One Park Avenue, Room 458, New York, NY 10016. Orders may also be charged to your Visa, MasterCard or American Express account—by mail include credit card name, number and expiration date, or if you prefer, use our 24 hour toll-free number, 800-631-8112. In NJ only 201-540-0445.

*NJ residents add 5% sales tax.

## IBM, continued...

Blue CPU Plus, and the product includes this device and some support software.

The product is an add-in CPU card for the IBM Personal. It includes a Z80B processor and 64K bytes of RAM. It enables the IBM to run standard CP/M-80 programs after they have been processed by a provided conversion program.

The conversion adds what Xedex refers to as a "header," after which the program can be placed on an IBM diskette where it appears to be an IBM-executable file. When it runs, however, the header moves the program into the memory space of the Z80 and initiates its execution there. The CP/M function calls are "translated" into IBM DOS calls, which are processed by the IBM 8088.

The best part of all is that the extra 64K bytes of RAM can be used by the Personal Computer as additional memory when the Z80 is not running. The product has a suggested retail of $600, which is only $60 more than the IBM 64 card! Very interesting.

I found out about this product just before my deadline, and I haven't had a chance to talk with the firm. It's high on my agenda, though, because it's a very clever and exciting concept. Xedex stated in the press release that they expect to sell 60,000 units in the 12-month period after product introducion, scheduled for April. 60,000! I wondered about that, but then I read an industry report that estimated that Microsoft's Z80 Softcard is responsible for 20% of all Apple II sales. Given the dearth of software for the IBM right now, I expect Xedex may have a tiger on their hands.

### GTCO Digitizer

Most of the products I mention in this column have a consumer, commercial, or educational appeal. Very few have what I would call a professional or technical application. The first exception is a digitizer, the Datatizer from GTCO Corporation.

GTCO is the inventor of the "electromagnetic absolute ranging" digitizer, a technology said to provide high resolution at low cost. The cost is out of range for a consumer, though, which is why I think GTCO appeals to a professional engineering audience.

A digitizer with a surface size of 11" x 11" is $1419, while the 20" x 20" model costs $3025. The significance of the GTCO offering is that the price includes Personal Computer software that can be used for various kinds of measurements. The press release gives the following five examples: material usage; material cost; length, distance, perimeter; area of irregular polygon; display XY coordinates to .001 inches.

The IBM PC configuration must include 64K RAM, at least one disk drive, DOS and Advanced Basic, and an asynchronous communications adapter to connect the digitizer.

### Retailing

I have mentioned before that there were very few IBM Product Centers. There still aren't that many by Computerland standards, but the number is growing. The list of cities with Product Centers is San Francisco, CA; Philadelphia, PA; Baltimore, MD; Columbus, OH; Orlando, FL; Washington, D.C.; Los Angeles, CA: Beverly Hills, CA; Boston, MA; Sunnyvale, CA; Seattle, WA; Chicago, IL; and New York City. There are three in New York, located in Chase Manhattan Bank lobbies.

Sears announced that their pilot test of computer stores was successful, and as a result will open 45 new Business Systems Centers in the next year. This is something to watch.

It has been rumored that IBM will open new distribution channels this year, but IBM would not speculate on the matter when I asked directly.

I have also tried to find out just how many units have been sold to date. IBM will not comment on volumes. There is a published report that IBM ordered 225,000 CPU chips from Intel for delivery during 1982. Of course, no one seems to have the slightest idea how many they have already bought.

More rumor: that IBM had orders for 100,000 machines by the time 1981 ended; that IBM predicts 100,000 sold for the first half of 1982; that IBM projects 350,000 or more installed machines by the end of 1982.

That's a lot of machines. I just don't see how that many computers could move through the external distribution channels IBM currently has in place. A good number of them, maybe more than 50%, must be sold through IBM's direct marketing force. That means mostly in the Fortune 1000 companies. Even so, that is still an incredible number of systems.

### IBM + Sears Does Compute

It has been reported in these pages that *Creative Computing*'s pioneering founder, the esteemed and highly regarded David Ahl, was not able to use his personal Sears credit card to buy the IBM Personal Computer in a Sears Business System Center. I had originally been told that Sears would accept the personal card. The official Sears position, stated in a letter to me, is that the Centers "...honor all regular Sears retail credit cards." The letter goes on to say that "It is also our policy, however, not to place merchandise purchased for business use on a consumer account." The letter explains that the Centers also offer Merchant Credit Accounts for qualified

businesses, and that Sears has introduced a special installment account specifically designed for the Business System Center.

One reader has written me to report that he used his Sears consumer account to purchase a system. A number have reported that Sears offered them that alternative. So what happened? It could have been a number of things, including credit ratings and limits, but it certainly was aggravating for Dave. I score the fight one point Ahl (it should have been a routine purchase) and one point Sears (Creative *did* get a machine, and on a Sears account at that).

**Users Groups**

I promised to mention users groups in the column. Here we go.

To my eye, the group that looks most interesting right now is IPCO, Inc., the IBM Personal Computer Owners Group, operating out of Pittsburgh. It was founded by Jim and Cindy Cookinham and Steve and Windy Hart. What I find interesting is the size and scope of the newsletter, called *IPCO Info.* The first was rather light, but okay. The second was 16 pages and very well done. From the first two newsletters, I get the clear impression that IPCO is working hard to become the pre-eminent national users group for the IBM Personal.

They are very busy—everybody I talk to seems to have heard of them. The second newsletter contains a call to local groups to contact IPCO and offers guidance on how to start one. U.S. membership is $15. IPCO, Inc., P.O. Box 10426, Pittsburgh, PA 15234.

Needless to say, I'm a member (in good standing so far) of the Greater Baltimore IBM Personal Computer User's Group. Initiated by Neil Gustafson and supported by my favorite local Computerland store, the group is embryonic but has published its first newsletter. No dues set yet. c/o Computerland, 1516 York Rd., Lutherville, MD 21093.

IBMicro, the IBM Personal Computer User Group of the Washington DC Area, has been formed. No newsletter yet, but they do have an electronic bulletin board that members with communications hardware can get to. IBMicro, 1414-C Wright Circle, Bolling AFB, Washington, DC 20336.

An informal group has been formed at California State at Fullerton. Three seniors in Computer Science are the founders. Contact Bob Martynec, 2633 E. La Palma, Apt. 8, Anaheim, CA 92806.

I did receive notice of a group formed in Philadelphia. However, it apparently is now affiliated with PACS, the Philadelphia Area Computer Society. The IBM information is carried as a column in the PACS newsletter. The IBM users distribute *IPCO Info* at their meetings. PACS, P.O. Box 1954, Philadelphia, PA 19105, dues $10.

**Displays**

Finally.

My letters have indicated quite a bit of confusion about the display technology available from the IBM. Here's a little clarification.

IBM offers two display adapters, that is, the electronic devices that interconnect the computer with a display device. The first is called the Monochrome Display and the Printer adapter. This device is specifically designed to connect the IBM Monochrome Display. Other direct drive monitors with a horizontal drive of 18Khz should work properly.

The adapter, however, does not support dot-addressable graphics. The only graphic images that can be displayed are those that can be built using the character set.

The Color/Graphics Adapter does allow graphics. It allows the connection of direct drive monitors, NTSC monitors, and televisions, any of which can be color or black and white. An RF Modulator is required to connect a TV. This adapter has precisely the same character set as the Monochrome Display Adapter, so software will operate correctly on both.

The difference between these two adapters, other than graphics, is that the Monochrome Adapter generates 7x9 characters in an 9x14 box, while the Color Adapter generates 7x7 characters in an 8x8 box. In addition, the Monochrome Display uses the P39 phosphor, which has a very high persistence.

The result on the Monochrome Display is highly readable, almost fully-formed characters with good separation (3 to 5 pixels) between lines. The characters from the Color Adapter are readable, but there

is less space (only 1 pixel) between lines. A character with a descender touches a tall or capital letter immediately below.

All this means that the Monochrome Display, with its excellent presentation, is highly desirable for text-oriented applications, or situations demanding a great deal of viewing, while the Color Adapter is required for graphic display applications.

A final note. The quality of text display on a device attached to the Color Adapter is solely dependent upon the display device. A reader from Garland, TX writes that a comfortable format on his Hitachi RGB color monitor is white characters on a blue background. If you are using the Color Adapter for text display, experiment with your display before you buy it to make sure you can stare at it for long periods.

**Both Adapters At Once**

One thing that is not explained well in IBM documentation nor understood clearly by most is how to deal with a system in which both display adapters have been installed.

The first thing to know is how to set the switches on the system board to indicate the dual display. This is stated in both the Guide to Operations and the Technical Reference. Switch 1 should have positions 5 and 6 set to OFF. This is the setting that means either the Monochrome adapter *or* both adapters. This setting causes the Monochrome Display to be the "default" display. That, in turn, raises the question "how is the Color Adapter engaged?"

That is the vital piece of information which is not mentioned anywhere in IBM manuals. On page 4-176 of the Basic manual there is an example of how to use the PEEK function. The example shows how to test location &H410 and determine which adapter is installed, but it cannot determine if *both* are installed.

Location 410 is called the "equipment flag" and is initially set by reading the switches on the system board. The test in the example program, reproduced here in Listing 1, is simply looking for a switch configuration indicating that the Monochrome Display is installed. Note that it examines the switches—you could pull out your Monochrome Adapter and the switches would still say "It's there."

The program in Listing 2 actually determines the presence of the display adapters. It does so by POKEing a value into the memory contained on the adapters, and reading it back. If the value is the same, the adapter is there. If the value is different, the adapter is not.

Listing 3 is my adaptation of the program "B" and "C" from the IBM Dealer Demo disk. These are the two Basic routines that know how to switch between displays. You will note that they modify the contents of location 410. This gives the appearance that only one device is installed.

The rest of the sequence in each subroutine is required to cause the BIOS routines to initialize properly for the desired display.

I wanted to change them so that I could get at one display without destroying the other, but I could not find a combination that worked. One reason is that the BIOS only keeps one set of records—when you switch displays you clobber the previous data.

To accomplish simultaneous display you must write a program that does all the bookkeeping. During my experiments, I would write to Color, switch to Monochrome, write there, but discover that my cursor position was where it had been left on Color, the Monochrome cursor having been lost.

Next month: Your guess is as good as mine. If I can get the information, I'll have a graphics screen to MX-80(G) or MX-100 dump program. □

**Stephen Gray**

At 41 minutes past the hour on the TRS-80 clock, we pause for a look at Radio Shack's new Model 16 and PC-2 computers, four-color PC-2 printer/plotter, and DT-1 video terminal, ask a question about the TRS-80's skin, revisit the programming of blank lines, check out Disk Scripsit, read praise of Scripsit, read a complaint about a CLOAD game, look at new games by Leo Christopherson and Hayden, and check out a short program with a surprise ending.

Very early this year, I asked somebody in Radio Shack management about rumors regarding a new computer. He said he didn't know about any new computers. Several weeks later, on January 19, 1982, Radio Shack introduced two computers and a terminal, but they weren't really all-new; they were very much based on previous TRS-80 products, so my friend hadn't really exaggerated....

**TRS-80 Model 16**

Take a TRS-80 Model II, replace the 8-bit Z-80A with a 16-bit microprocessor, replace the single 8" single-sided disk drive with one or two "thin-line" 8" double-sided disk drives, raise the maximum internal RAM storage space from 64K to 512K, add multi-user capability to the operating system, change the black keytops to white and vice-versa, and you've pretty much got a TRS-80 Model 16. In fact, you can upgrade a Model II to a Model 16.

The Model II uses one Z-80A for the keyboard, the other for the video. The Model 16 uses a Z-80A for input/output, but for a main processor uses a Motorola

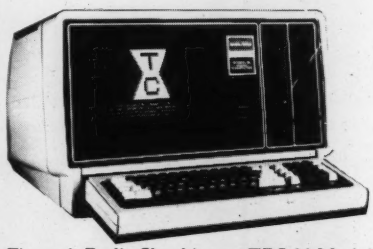

*Figure 1. Radio Shack's new TRS-80 Model 16 uses a Motorola 16-bit microprocessor and is compatible with the Model II.*

MC68000, which allows the 16 to access more memory than the Z-80A does. Also, because the data path of the 16 is 16 bits wide, and because the MC68000 can perform 32-bit operations internally, the new computer can process more complex data and at higher speeds. The MC68000, by the way, is a generation newer than the Motorola 6809E used in the Color Computer.

The single built-in disk drive in the Model II stores 416,000 characters. The TRS-80 Model 16 comes in two basic versions, both with 128K of RAM: single drive, 1¼ megabytes of storage, at $4999; two drives for a 2½-megabyte capacity, $5798. That's three (or six) times the internal-disk capacity of the Model II, and four times as much RAM as the basic one-drive 32K Model II that sells for $3450.

The multi-user feature permits adding one or two local or remote terminals (such as the new DT-1 described later) so that up to three people can use the computer at the same time.

**Upgrading a Model II to a 16**

The Model II is upward-compatible with the Model 16, meaning Model II programs will run on the 16, but not always vice-versa. Like the Model II, the 16, through one of its serial ports, is capable of bisynchronous communications with IBM and other mainframes. Adding a hard-disk port permits using up to four of Radio Shack's 8.4-megabyte Winchester-type hard disk drives.

A Model 16 Enhancement Option consists of two plug-in boards that provide the Model II with the 16-bit, dual-processor, multi-user features of the Model 16, for $1499 (plus installation). The Model II's disk drive and display remain unchanged in this upgrade.

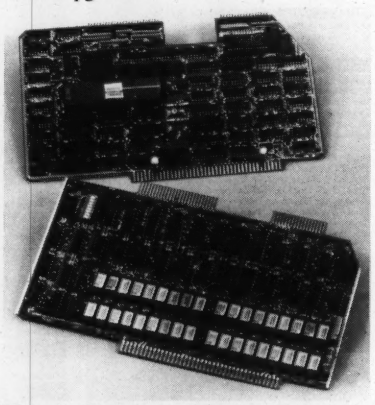

*Figure 2. These two plug-in boards upgrade a TRS-80 Model II to a Model 16, giving the user 16-bit, dual-processor, multi-user operation.*

The TRS-80 Model 16 is aimed at sophisticated corporate users. It is compatible with Radio Shack's ARCNET local network (based on Datapoint Corp.'s ARC network), which supports up to 255 Model II and 16 computers in any combination, and which is due in mid-1982.

**TRS-80 DT-1 Video Terminal**

Replace the dual disk drives of a TRS-80 Model III with a single cover, change the display from 16 lines of 64 characters to 24 lines of 80 characters, change the microprocessor, and you've pretty much got Radio Shack's DT-1 Video Data Terminal. The price is $699, which coincidentally is the price of a 4K Model III without disk drives.

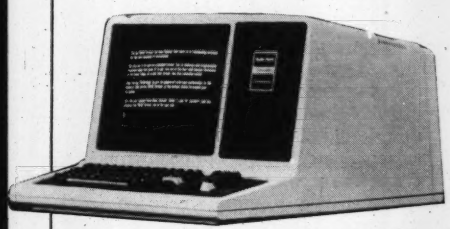

*Figure 3. Radio Shack's DT-1 video data terminal, based on the TRS-80 Model III, is designed for multi-user applications of the Model 16 and as a time-sharing remote terminal.*

The DT-1 can emulate the protocols of four standard terminals—Televideo 910, Lear-Siegler ADM-5, ADDS 25, Hazeltine 1410—with configurations selected from the keyboard, and will maintain a protocol despite power failures through the use of an EEPROM (Electrically Erasable Programmable Read-Only Memory).

The display provides normal, reverse, invisible, blinking, underlined and half-intensity video, along with four types of keyboard-selected cursors: steady or blinking, block or underline.

The DT-1 has both parallel and RS-232C serial interfaces enabled as printer ports by a local-monitor mode that also can position the video cursor using local-control and escape modes. Ten keyboard-selectable baud rates, from 75 to 19,200, are available. An electronic bell is standard.

**PC-2 Pocket Computer**

At first glance, the new PC-2 Pocket Computer looks very much like the older model that Radio Shack may eventually call the PC-1. But look closer and you'll see several differences in the PC-2, which is list-priced at $279.95.

The new display is 26 characters long instead of 24, and has both uppercase and lowercase characters. The typewriter-style keyboard still uses the QWERTY layout, but the 13 shift-mode characters (dollar-sign, up-arrow, etc.) have all been relocated and three more have been added: square-root, ampersand and @. Also added are six function keys; in addition, the PC-2 has 18 "soft keys" and 10 pre-programmed command keys.

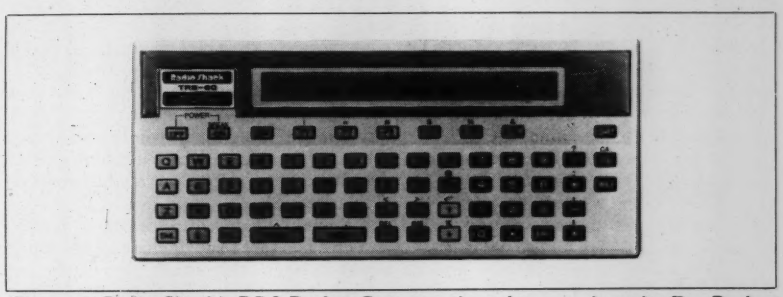

*Figure 4. Radio Shack's PC-2 Pocket Computer is a close cousin to its first Pocket Computer; but the memory can be expanded internally.*

However, the *big* differences are that the PC-2's memory can be expanded internally, it can be expanded externally through a 60-pin I/O connector, it uses Extended Basic, and it will be usable as a terminal.

A $69.95 4K RAM module plugs into a recessed port on the back of the PC-2; up to 16K of RAM and/or ROM may be plugged in. (Plug-in ROM-based programs may thus be in the offing.) The standard PC-2 memory consists of 16K bytes of system ROM and 2640 bytes of user memory (1850 bytes of Basic program and data RAM, 600 bytes of fixed data memory, and 190 bytes of reserve memory).

The PC-2's Extended Basic has 42 statements, 34 functions and 6 commands, and includes two-dimensional arrays, variable-length strings up to 80 characters long, and string-handling commands such as LEFT$, LEN, VAL and CHR$. A built-in real-time quartz clock is accessible from the keyboard or from Basic.

A fully-addressable LCD dot-matrix display of 7 by 156 dots permits generating special user-definable characters.

Late in 1982, Radio Shack plans to introduce an RS-232C interface and software that will let the PC-2 be used as a terminal with many RS-232C-equipped computers and peripherals, as well as providing connection to Radio Shack's modems for data communications over ordinary telephone lines.

The PC-2 Pocket Computer, according to Radio Shack, has "advanced capabilities" that "open up a great many application areas, including engineering, scientific and medical calculations; banking, credit, insurance, investment and financial applications...its capabilities are closer to a desktop computer than any previous pocket computer, yet it costs much less than typical desk top personal computers."

The PC-2's Extended Basic is upward-compatible with TRS-80 Pocket Basic, so programs prepared for the "PC-1" will run on the PC-2.

**PC-2 Four-Color Printer/Plotter**

A four-color printer that can plot graphics, plus a dual-cassette interface, comprise the PC-2 Pocket Computer Printer/Cassette Interface, available in mid-1982 at a list price of $239.95.

The printer/plotter adds 25 commands and statements to Pocket Extended Basic, including special statements for plotting 216-by-512-pixel graphics in red, blue, green and black with replaceable ballpoint pens, on 2¼" cash-register-type paper. Characters can be printed in nine different sizes, from 4 to 36 per line.

The "PC-1" is manufactured for Radio Shack by Sharp Corp., which markets it as the PC-1211 Pocket Computer. The PC-2 is also made by Sharp.

**Aluminum Sprayed on Plastic**

If you've used a TRS-80 awhile, and are in the habit of resting your hands on the plastic surrounding the keyboard, you've probably found that the aluminum color isn't molded into the plastic—it's sprayed on.

So what can you do to keep it from wearing off? If you cover the two places where your palms rest on the surround, then when you try to remove the tape later, you'll take off more aluminum paint than if you hadn't used the tape. Any solutions? And has anybody found a spray-on or brush-on paint that matches the TRS-80's aluminum color?

**Blank Program Lines Revisited**

From Washougal, WA, Delmar D. Hinrichs writes:

"You did it the hard way! In your column in the Jan. 1982 issue of *Creative* (p. 180), you suggest adding blank lines to programs by adding spaces until the cursor goes to the next line. This works, but there is a better way.

"Instead of adding spaces to the program line, use the ↓ (down-arrow) key. This puts a line-feed character, ASCII 10, into the program line. Besides requiring fewer key strokes, this method of adding blank lines has two real advantages:

1. Fewer bytes are added to the program (I always seem to be short of memory).

2. The program will list on a printer the same as it is displayed on the video display.

"This method of using ↓ may also be used to break long lines to make them easier to read. The ↓ may even be used within a long ON/GOTO, ON/GOSUB, or DATA statement to make it look better. For such long lines, it helps to add a space or two after the ↓ to indent the later part(s) of the line."

Delmar is right, but only for printers such as the Radio Shack Line Printer VIII. If you've got a printer like Radio Shack's Line Printer II, which is really the Centronics 730, you can add a dozen line-spaces with the down-arrow, and that printer will ignore them completely, and print, one after the other, the two lines you had hoped would be separated by two inches of space. With the II/730 and others like it, you must add spaces the hard way: one at a time.

**Disk Scripsit**

Radio Shack's Disk Scripsit is almost exactly like cassette Scripsit (June 1980, p. 166), with only a few small differences. One is price: the Model I/III disk version of this word-processing program is $99.95; on cassette, for 16K Level II or Model III Basic, it's $39.95.

The manuals for the two Scripsits are almost identical, except where they involve loading the program. Also, the disk manual includes a page on "Helpful DOS Instructions," half a page on "Using Scripsit in Conjunction with Basic" (save all Basic files in ASCII format), additional error messages, and 2½ pages on "How to Modify Scripsit for Use With Special Printers" (with assembly-language routines), plus two addendum sheets that say, among other things, that the Scripsit disk "can be backed up or copied only twice" (really??).

You get the same three audio tapes with both versions, with six lessons that guide you through what, as the cover indicates, is actually more of a training guide than a manual. This makes it difficult for you to look up anything later; there's no index. So you usually have to depend on the Instruction Summary Card, which is very handy if you use Scripsit often enough for the summarized material to be meaningful.

All these differences aside; if you're writing anything more than a few pages long, Disk Scripsit is the way to go. If you've got a 16K TRS-80 and cassette Scripsit, you can keyboard only about 3½ double-spaced pages of text before the memory is full, and you have to save it on tape before you can add any more.

With Disk Scripsit, you can enter over 100 double-spaced pages on one 5¼" disk, and move paragraphs around much more easily than on tape, where it is cumbersome to move material from one recorded section to another.

Some of the features that make Scripsit such a pleasure to use include global search and replace, text centering, page numbering, hyphenation help, headers and footers, and justified margins.

**In Praise of Scripsit**

The following letter is from George Brubaker, a research associate in the Department of Chemistry at Wayne State University, who has a TRS-80 with a low serial number:

"I have followed your column since its inception (this is SN 7727 running Scripsit, the real point of my letter), and find it to be an excellent focus for those of us who are TRS-80 devotees as well as newcomers who are comparison-shopping.

"I've often been asked why I am such a devoted TRS-80 fan. Frankly, for two reasons, which might be worth restating in your column.

"1. This is the most reliable computer I have ever used. Obviously, it is old. It has never been serviced because of a failure. It has been 'lowercased' and it has had the keyboard replaced (after three years of full-time service), both by Radio Shack, and both times with a turnaround of 30 hours or less. In comparison, we are still trying to find reliable and fast service for our Apples (which need a great deal of service) and our PETs (which don't, but when they do....). *Service*, then, is a key point in Tandy's favor (at least in metropolitan Chicago, our full-time home).

*"You'll find 'Running Business Efficiently Without A Computer' on the fiction shelf..."*

"2. Scripsit is a nice word-processor, which has been reviewed several times. But in each review, a key point was missed, a point which also bears heavily on the overall utility of the TRS-80 computer. That is, Scripsit, Basic and Fortran can read and write common *full ASCII files* (in contrast with the more common compressed ASCII used internally by most Basic interpreters). In essence, that means you can write and edit programs as well as letters using Scripsit provided that the Basic or Fortran program is saved from Scripsit using the ?S,A option.

"Programs written in Disk Basic and saved with

SAVE "name",A

may be loaded into Scripsit for editing (or formatted printing). If you've ever wanted to change one line number in Basic, or change every occurrence of a string in a Basic program, you already have justification for getting Scripsit.

"If you've used both Scripsit and EDIT80 in the Radio Shack Fortran package, you can appreciate the power of that 'A' option. Scripsit tabs can be set for Fortran programs (or Pascal, if you like 'prettyprint listings'), and a program may be written and edited just like a letter. You needn't worry about the line numbers EDIT80 puts in your program. Forget 'em, because the Fortran compiler doesn't want them; they are used only to guide the programmer and EDIT80."

**Survivor**

I've got a complaint against the *Survivor* game in the Jan. 1982 issue of CLOAD. There's not much problem getting away from a piranha, pterodactyl, giant squid, tyrannosaurus or even a zombie as you move toward the treasure. Even a ghoul can be evaded. But as the treasures increase in value, the monsters get closer...(gulp)... and closer. The wraith and the demon can sometimes be outwitted, but the witches—oh my, the witches!—they stay close, they breathe down your neck, ready to leap on you the second you stray from the safety barrier around the perimeter, just as you're heading for the $3500 gold nugget or the $2400 sapphire broach.

The game's author is a fiend, an absolute fiend. He lets the early easy wins lull you into a false sense of confidence, so you're easy prey to the Green Witch, if you get that far, which is doubtful. Author John Howard (may he spend the rest of his life in Cleveland, writing tic-tac-toe games) has made sure that long before you escape the ultimate horror, the Green Witch, and make off with a total of $101,000 in treasures, you will die of heart failure or go berserk. What's more, this fiendish Aussie (of Toorak, Victoria), had the unmitigated

# COLOR COMPUTER

**TRS-80**

## COMPUVOICE

Give your computer a voice of its own - build speech into your BASIC programs. This machine language program is a must for your library - no hardware modification needed. $44.95

## RAMCHARGER 32K UPGRADE

- EXTEND MEMORY FROM 16K to 32K
- 100% Compatible With Extended Basic
- No Soldering Or Modification
- Fits Inside Computer
- $79.95

**Color Invaders**

**Space War**

- The Best Games Available
- High Resolution Graphics
- Fast, Machine Language
- Ext. Basic Not Required
- $21.95 each, cassette
- $25.95 each, disk

## THE FACTS

At last, a complete description of the "guts" of the Color Computer. Specs on all the ICs, complete schematics, theory of operation and programming examples.

$14.95

## MADNESS & THE MINOTAUR

The best adventure game available for the color computer. Over 200 rooms, 6 creatures, 8 magic spells, loads of treasures. Written in machine language, extended Basic not required. $19.95

## NEW MACHINE LANGUAGE GAMES

- COSMIC SUPER BOWL $14.95
  Similar to hand held football games
- PACKET MAN $21.95
  Gobble your way through the maze while avoiding the munchkins.

Complete with high resolution graphics and sound.

- CROID $12.95
  Eliza type artificial intelligence game.

## SOUNDSOURCE

Store music or voice from a cassette tape in the computer and display it on the TV screen. Shorten it, lengthen it, modify it and replay it through the TV's sound system. Build and test your own sounds for games. No hardware mods needed.

$24.95

## EXTENDED BASIC GAMES

- LOTHAR'S LABYRINTH)
  Word Search Puzzle
- BATTLEFLEET
  Battleship Search Game (one or two players)
- SPACE TRADERS
  Galactic trading game

$14.95/ea.

## UTILITIES

- EDITOR/ASSEMBLER ..... $34.95
- SUPER MONITOR ..... 19.95
- EPROM PROGRAMMER ..... 89.95
  (Program your own ROMs for the ROM-PAC port)
- MAGIC BOX ..... 24.95
  Load MOD I/III Tapes into the color computer
- DISASSEMBLER by Korenthal ... $14.95
  Written in BASIC - generate source and object code for the FACTS.

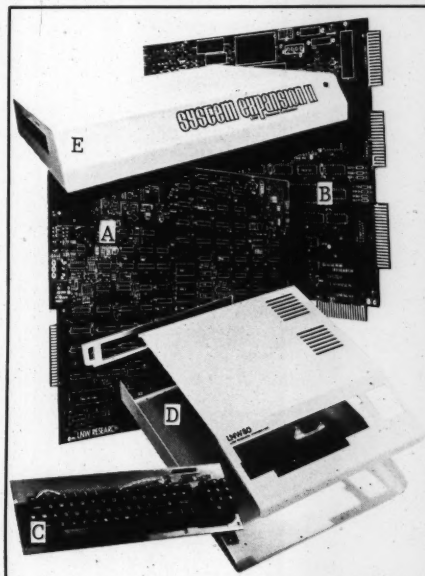
# COMPUTER KITS – FROM $69.95



**LNW SEMI-KITS** can save you hundreds of dollars. By obtaining your own parts at the lowest possible cost and assembling the **LNW SEMI-KITS**, you can have the most highly acclaimed microcomputer in the industry – the **LNW80**. The **LNW SEMI-KITS** are affordable modules. You can start with a modest cassette system and expand to a full 4Mhz TRS-80 compatible system with 5 or 8 inch double density disks and color at any time.

**A. LNW80 CPU** – Made of high quality FR4 glass epoxy double sided circuit material, with plated-through holes and gold edge connector. It is fully solder-masked and silk screened. Here are just some of the outstanding features you will have when your **LLNW80** CPU board is fully assembled: • 16K RAM • Color and black and white video • 480 x 192 high resolution graphics • 64 and 80 column video • 4 Mhz Z80A CPU • Upper and lower case display • 500 and 1000 baud cassette I/O – **$89.95**

**B. SYSTEM EXPANSION** – Expand the **LNW80** computer board, **TRS-80** and **PMC-80** computer with the following features: • 32K memory • Serial RS232C and 20Ma port • Real time clock • Parallel printer port • 5 inch single density disk controller • Expansion bus (screen printer port) • Onboard power supply • Solder-masked and silk screened legend – **$69.95** (tin plated contacts) – **$84.95** (gold plated contacts)

**C. KEYBOARD** – 74 key expanded professional keyboard – includes 12 key numeric keypad. Fully assembled and tested. – **$99.95**

**D. COMPUTER CASE** – This stylish instrument-quality solid steel case and hardware kit gives your **LNW80** that professional factory-built appearance. – **$84.95** Add $12.00 for shipping.

**E. SYSTEM EXPANSION CASE** – This stylish instrument-quality solid steel case and hardware kit gives your **SYSTEM EXPANSION** interface that professional factory-built appearance. – **$59.95** Add $10.00 for shipping.

**F. LNW80** CPU – HARD TO FIND PARTS KIT – **$82.00**

**G. LNW80 VIDEO** – HARD TO FIND PARTS KIT – **$31.00**

**H. SYSTEM EXPANSION** – HARD TO FIND PARTS KIT – **$27.50**

**I. LEVEL II ROM** set. (6 chip set) – **$120.00**

**VISA** and **MasterCard** accepted. Add $3.00 for shipping plus $1.00 for each additional item. All shipments via UPS surface. Add $2.00 for U.S. Mail. Shipments outside continental U.S.: funds must be U.S. dollars. Sufficient shipping costs must be included with payment.

**CIRCLE 186 ON READER SERVICE CARD**

gall to write *Survivor*, not in machine language, but in Basic.

**Voyage of the Valkyrie**

One of Leo Christopherson's best thus far is *Voyage of the Valkyrie*, the first game from the Advanced Operating Systems division of Howard W. Sams & Co., and "available at computer stores nationwide" with a suggested list price of $34.95 for cassette, $39.95 for disk.

"As you move through the island of Flugloy," according to the press release, "you encounter bird-like creatures which fly around your CRT in an effort to protect their castle's treasure."

Your first job is a game in itself: map the island. Half a dozen double-sided gridsheets are supplied. You teletransport yourself from one location to another, often right into a solid object; you'll be destroyed many times in your mapping.

Some map locations are defended; you fire at the birds with a complex weapon. There are ten castles to be captured, each containing gold; your score is the amount of gold you have at the end.

A full description of Leo's game could take pages. There's Wagnerian music played (via an external amplifier and speaker) "at various appropriate times during the campaign," ten levels of difficulty (with about 60 birds to defeat at level 0, up to about 600 at level 9), different birds with differing weapons and fighting abilities, energy to replenish, a complex Status Report, and ranks that you climb as you capture more gold, from private to prince regent.

The 12-page manual is as colorful as it is complete, with a diagram of the keyboard that shows very clearly what each relevant key is for.

As usual with Leo's games, the graphics are superb, as are all the other facets. This is another of the handful of games that create high standards for others to aim at.

**Mind Thrust**

Described on the back of the 12-page manual as "The first of its kind—an exciting game that lets you match wits with the computer," this $16.95 tape for Level-II 16K TRS-80 from Hayden Book Co. doesn't quite match that claim.

For one thing, there *are* other games, more exciting, that let you match wits with the computer. The most recent one reviewed here is *Iago*, (Feb. 1982), Datasoft's version of *Othello*, and highly addictive.

For another, *Mind Thrust* involves just a little too much luck. It's an 8-by-6-square board game in which you try to "complete an unbroken chain across the playing board" to win. "The player takes turns at either adding a piece to his chain or attacking the opponent's chain to make it shorter."

When you are attacked, you announce which of your pieces you choose to defend. "If the point attacked is *not defended*, the piece in that square is replaced by an attacker's piece. All of the defender's pieces touching the attack point are removed from the board."

The catch is that skill plays very little part in deciding whether you are successful in defending your pieces; it is a random choice by the computer. If you like a mixture of "skill and luck" then perhaps you'll like this game, which has a "legalized cheating" feature: at any time you can switch sides with the computer. Any time you're about to lose, just switch and take over the winning side.

**Short Program #30: Watch Close Now**

Jeff Holman, a high-school senior in Monroe, NC, sent a short program that does something mysterious—if you don't know how it works.

"Our Sun Valley High School math club, of which I am a member, recently purchased a Level-II 4K TRS-80 for the members to use in their spare time. (We do not have data-processing classes.) It was not long before we started subscribing to *Creative Computing*.

"I have since written many programs (lately I have concentrated on those using graphics). Some that I am most proud of are a program that displays output alphanumeric characters as one-inch-high graphics characters as soon as the individual keys are hit (or twice the width if the SHIFT and right-arrow keys are hit) and an *Etch-A-Sketch* program that allows the user to draw pictures on the screen. When the picture is finished, the entire screen is 'saved' in a few strings that can be printed at any time. (It would be a lot easier if I knew how to use machine language!)

"I went off on a tangent with string-packing. Instead of poking graphics characters, a program I wrote pokes alphanumeric characters. This particular program is helpful when 'pictures' are stored in memory to be printed on a line printer. The characters can be typed on the screen to form the shapes desired as they are simultaneously 'packed' into successive strings.

"I have a zillion-and-one short programs I'd like to send in, but I'll just concentrate on one for his letter. I won't say what the program does (I love surprises!). The real 'meat' of the program is between lines 60 and 90; the rest is just to prepare the screen.

"I know it's a bit too slow for most programs, but I'll leave it up to your readers to 'juice it up.'"

```
10 CLS
20 FOR X=15360 TO 16384
30 POKE X,RND(64)+127
40 NEXT X
50 'OKAY—WATCH CLOSE NOW
60 FOR X=15360 TO 16384
70 XX=PEEK(X)
80 POKE X,191-(XX-128)
90 NEXT X
100 GOTO 100
```

If you have trouble figuring out how this works, change 16384 to 16383 in both places, and then ask yourself why the change makes a difference. If that doesn't help, look at the Level-II TRS-80 memory map in the Radio Shack manual. If you can write a very short program that produces the same effect as these ten lines, then you understand what's going on.

Line 80 reverses each displayed graphics character to its "negative" but only once. If you change 16384 to 16383 and change line 100 to

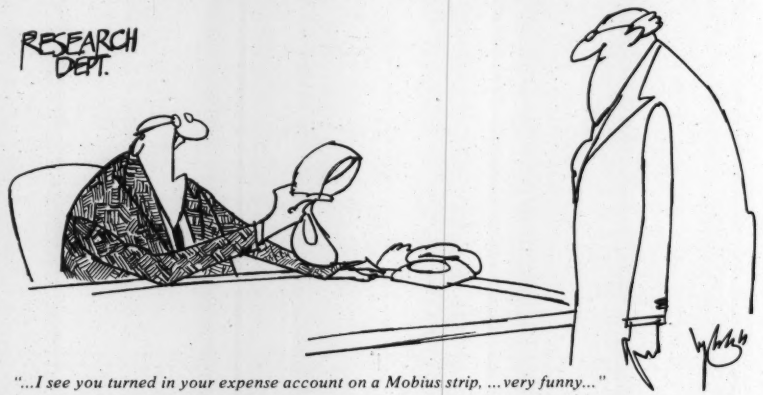
```
100 GOTO 60
```

the screen will alternate continuously between a display of graphics characters and their negatives. Changing line 100 to

```
100 GOTO 20
```

provides a different pair of positive/negative displays at each go-around.

NOTE: This short program works as described with Model-I Level-II Basic and with Model III Basic. Although with Model III Disk Basic, the "watch close now" effect isn't as dramatic, you may still have a problem figuring out what happened. □



*"...I see you turned in your expense account on a Mobius strip, ...very funny..."*

# data base

**FINALLY**, a copiable, user modifiable, flexible data base program for the Apple II or Apple II Plus. The Applesoft source code and the fast machine code sort element are open for user inspection and change. The package is also available with a BASIC language teaching program for use by "non-programmers".

CMA Presents

**The Features Include:**

- 30,000 Word Manual
- 34 Page Annotated Source Listing
- Fast Sort Element (1,000 mailing labels in 3.5 seconds)
- 9,999 Records
- Byte by Byte Access
- File Management Utility
- Report Preparation Utility
- Quiry/Search Element
- File Transfer Utility
- Free Mailing List, Checkbook Utility, and Inventory Control Program
- (Optional) 17 Lesson Course in BASIC

THE REPROGRAMMABLE DATA BASE #D-075. $99.95

THE REPROGRAMMABLE DATA BASE PLUS (with 17 lesson BASIC course) #D-076. $149.95

# COTTAGE SOFTWARE

PACKER: Machine language program that edits all or part of your Basic program to run faster, save memory, or ease editing. The 5 options include UNPACK—unpacks multiple statement lines into single statements maintaining logic inserts spaces and renumbers lines. SHORT—deletes unnecessary words, spaces, and REM statements. PACK—packs lines into maximum multiple statement lines, maintaining program logic. RENUM—renumbers lines, including all branches. MOVE—moves line or blocks of lines to any new location in program. On 2 cassettes for 16K, 32K, & 48K. For TRS-80™ Mod I or III Level II or Disk Basic. . . . . $29.95

SYSTEM TAPE DUPLICATOR: Copy your SYSTEM format tapes. Includes verify routines. The Model III version allows use of both 500 and 1500 baud cassette speeds.
For TRS-80™ Model I or III Level II. . . . . $15.95

CASSETTE LABEL MAKER: A mini word processor to print cassette labels on a line printer. Includes 50 peel-and-stick labels on tractor feed paper.
For TRS-80™ Model I or III Level II & Printer . $17.95

PRINT TO LPRINT TO PRINT: Edits your Basic program in seconds to change all Prints to LPrints (except Print@ or Print#) or LPrints to Prints. Save edited version.
For TRS-80™ Model I or III Level II. . . . . $12.95

FAST SORTING ROUTINES: For use with Radio Shack's Accounts Receivable, Inventory Control I, and Disk Mailing List Systems for Model I Level II. Sorts in SECONDS! You'll be amazed at the time they can save. Supplied on data diskette with complete instructions.
FAST SORT for Accounts Receivable. . . . . $19.95
FAST SORT for Inventory Control I. . . . . $19.95
FAST SORT for Disk Mailing List (specify data diskette cassette for 1 drive system). . . . . $14.95
ALL THREE ROUTINES. . . . . $44.95

Prices subject to change without notice. Call or write for complete catalog. Dealer inquiries invited. VISA and MasterCard accepted. Foreign orders in US currency only. # Personal Electronic Transactions

I am happy to hear from you, and encourage your correspondence. I will try to acknowledge all correspondence, and a SASE makes things easier for both of us. Please send your letters to "Personal Electronic Transactions" c/o P.O. Box 354, Palo Alto, CA 94301.

**Gregory Yob**

A while ago, I took a look at the PET/CBM Personal Computer Guide which comes with each PET and discovered that the sections on using the PET disk drives were, to say the least, confused. In particular, the relations between Basic 3.0 ("new" ROMs), Basic 4.0, the model 2020 and model 4040 disk drives simply did not make any sense. So, let me try to light a small candle on the subject and see what's what.

To start with, the PET disk drive is an *independent* peripheral which talks with the PET via the IEEE 488 bus. The disk has its own computers—two of them: one to talk with the IEEE 4888 and one to talk to the disk drives—which handle all of the disk operations. The PET merely sends commands and data via the IEEE 488 bus. This situation is *very different* with other popular microcomputers.

Most personal computers handle their disk operations directly, i.e., all of the directory maintenance, file I/O, etc., goes through the computer. For example, if you had an Apple and told the machine to format a new disk, the Apple would be completely tied up while the disk was being formatted.

With the PET, you can tell the disk to do the formatting, and you can do some other operation while the disk drive formats the disk.

As far as the PET disk is concerned, the PET does not exist. The disk drive sees only the IEEE 488 bus. This leads to two very interesting consequences: first, more than one PET can share a disk drive—provided only one of them uses the disk at any time; second, *any* IEEE 488 compatible device can use the PET disk drive if the device can send the required commands over the IEEE bus.

The HP desktop computers, or even (heaven forbid) an Altair or North-Star S-100 computer with an IEEE 488 card could use the PET disk. Of course, some programming work would be required.

**2020 vs. 4040**

Now, about the 2020 vs. the 4040. The 2020 disk drives were the first disk drives made by Commodore. Several bugs exist in the model 2020, and the 4040 is essentially an upgraded version of the 2020. Disk DOS 1.0 and 2.0 refer usually to the 2020 disks, and DOS 2.1 refers to the 4040 disk. (Note: The 3030 disk is the 4040 adapted to European AC power.)

Now, please take note: *The PET disk model and DOS have no relation to Basic 3.0 or Basic 4.0.* If you still have the 2020 model disk, you can get it upgraded to the 4040 by a change of ROM chips. I *strongly* recommend that you do this.

Diskettes written by one model of the disk can be read by the other model but not written to. If I put a 2020 format diskette into my 4040, I can read the directory and files, but I cannot write to this diskette.

The reverse situation is also true—with a major catch. Your 2020 disk will try to write to the 4040 diskette and the result will be a mess. When you get a "wrong sex" diskette, use the COPY command to transfer the files to the "right sex" disk. You cannot DUPLICATE or BACKUP the "wrong sex" diskettes.

The 2020 disk drives are rather unintelligent concerning the insertion of new diskettes into the drives. If you put diskette A in, use it (which requires the "initialization" command), and then remove diskette A and insert diskette B, you are in danger. You must "initialize" again or the 2020 believes that diskette A is still there, and if you SAVE a file, diskette B gets rather smashed up.

The full explanation of this weird behavior would take most of a column, but here is a very brief summary: On each diskette there is stored a table which indicates where the unused sectors are. This is called the BAM map. When the 2020 "initializes," the BAM map is read from the diskette into the local memory of the 2020 (*not* the memory of your PET—the PET disks have their own RAM), and stored to make any write operations to the disk operate quickly. If the BAM weren't held in the memory of the disk drive, it would have to be read and written to the diskette many times. If you change the diskette without re-initializing it, a future write

*Figure 1. Basic 4.0 Disk Commands and Their IEEE 488 Equivalents.*

All Basic 4.0 commands can be replaced by their equivalent IEEE 488 command. The IEEE 488 commands which use PRINT# assume that OPEN 1,8,15 was performed earlier. For other variations on the commands than the single example shown, consult your disk or Basic 4.0 manual. The U option in Basic 4.0 means a different IEEE device number is used in the disk open statement. For example, INITIALIZE D1 ON U7 implies OPEN 1,7,15 followed by PRINT#1, "11".

| Basic 4.0 | IEEE 488 |
|---|---|
| INITIALIZE D1 | PRINT#1,"I1" |
| HEADER "NEWDISK",D0,ID | PRINT#1,"N0:NEWDISK,ND" |
| CATALOG D1 or DIRECTORY D1 | LOAD "$1",8 followed by LIST |
| BACKUP D0 TO D1 | PRINT#1,"D1=0" (note reverse order) |
| COPY D1 TO D0 | PRINT#1,"C0=1" (note reverse order) |
| COPY "AFILE",D0 TO "BFILE",D1 | PRINT#1,"C1:BFILE=0:AFILE" |
| COLLECT D0 | PRINT#1,"V0" |
| DSAVE "TURTLE",D1 | SAVE "1:TURTLE",8 (three examples |
| DSAVE "TURTLE",D0,R | SAVE "0@:TURTLE",8 given here to |
| DSAVE "TURTLE",D1,U7 | SAVE "1:TURTLE",7 show variations) |
| DLOAD "FISH",D1 | LOAD "1:FISH",8 |
| RENAME "TURKEY",D0 TO "FOWL" | PRINT#1,"R0:FOWL=TURKEY" |
| SCRATCH "FOO",D1 | PRINT#1,"S1:FOO" |
| CONCAT "XTRA",D0 TO "SOME",D1 | PRINT#1,"C1:SOME=1:SOME,0:XTRA" |
| DOPEN#3,"ELDATA",D1,W | OPEN3,8,2,"1:ELDATA,SEQ,WRITE" (It's up to you to |
| DOPEN#4,"RNDATA",D1,L25 | OPEN4,8,3,"1:RNDATA,REL,L"+CHR$(25) maintain the secondary |
| DCLOSE#5 | CLOSE 5 addresses) |
| RECORD#3,300,47 | PRINT#1,"P"+CHR$(SA)+CHR$(44)+CHR$(1)+CHR$(47) |

The functions shown below are not BASIC 4.0 commands and must be done in the IEEE 488 format:

(The value SA is the secondary address that the file was opened to. 44 and 1 represents the number 300 in low-hi format.)

```
Open Data file to add more sequential data.
Change Unit Address from 8 to 7.

Verify program DRIVER on drive 0.
```

```
OPEN5,8,2,"ELDATA,SEQ,A"
PRINT#1,"M-W"CHR$(12)CHR$(0)CHR$(2)CHR$(39)CHR$(71)
        (39 and 71 are 32+7 and 64+7 respectively)
VERIFY "0:DRIVER",8
```

The advanced disk commands B-R,M-W, etc., must be performed in the IEEE 488 form. See your Commodore Disk manual for further information on these. If you look at the TEST/DEMO disk programs you can glean some information which is not in your manual. Happy hunting.

operation will use the BAM map of the first disk to write onto the second disk whose BAM is entirely different. The only possible result is a disaster for your second diskette.

The 4040 disk drives circumvent this problem by looking at the "disk ID" which is a two-byte quantity written onto *each sector* of the diskette. When a disk operation is attempted, the ID found on the diskette is compared with the ID last seen. If they are different, the BAM map is read and the change of diskette is detected.

However, sometimes you can't win. When a diskette is duplicated by DUPLICATE or BACKUP, the disk ID is duplicated also. If diskettes A and B have the same ID, the problem remains, for the 4040 still doesn't recognize that the diskettes are different. If only Commodore had looked at the disk drive door and put a switch there. . .

(Note for 2020 users: if you SAVE a program and then VERIFY it, the BAM map is automatically updated. This also cures the "replace file" bug whose causes are similar in origin. SAVE "@0:FOOFILE" followed by VERIFY "0:FOOFILE" re-initializes your disks.)

**Basic 3.0 vs. Basic 4.0**

Now, let's tackle Basic 3.0 vs. Basic 4.0. First, the reason you get "new" ROMs when you buy a disk drive (provided you had the "original" ROMs) is that the early PET ROM set had a fatal bug in the IEEE 488 software. (The IEEE 488 ATN line was always TRUE in LOAD and SAVE, preventing any data transfers on the bus, so programs couldn't be moved from PET to disk or vice versa. Data files work fine on the IEEE 488 bus for all PETs.)

Basic 3.0 (sometimes called Basic 2.0 or the "new" ROMs) is merely the original PET basic with several major bugs fixed. Your PET sees all IEEE 488 operations as files, and aside from LOAD and SAVE, all communications with the PET disk are conducted as data file operations. This, of course, is *incredibly clumsy*. (We do get used to *anything* in this field, however strange it may be.)

So, in Basic 3.0 we have the rituals of OPEN, PRINT# and CLOSE. To add to the delight, the PET disk drives use Secondary Address 15 as the "command channel," which means that you must OPEN n,8,15 to issue commands to the disk drive. If you OPEN n,8, (some other number), you are sending data to the disk (not commands).

So, in short, your PET opens a file which is in your PET to talk to the IEEE 488 bus. Then your PET sends characters on the IEEE bus which are seen by the disk. Depending on the Secondary Address (provided by the PET as directed by your OPENing the file), the disk will see either commands or data. The disk maintains its own *separate* set of file descriptions and does the required operations.

When your PET sees a CLOSE file operation, this is sent on to the disk, which then changes its set of file descriptions. Can you see what's coming?

If you never CLOSE a file in the PET—say you interrupted a program, loaded another program which used different file numbers, etc., and ran it—the disk will leave its version of the file still OPEN.

If you have troubles with losing files, the three major gotchas are:

1. Failure to re-initialize after inserting each new diskette—2020 users only.

2. Inserting a diskette with the same ID as the previous one. (By the way, changing the ID in the directory does *not* change the ID in the sectors.)

3. Failure to CLOSE all files when done with disk operations. This one is hard to detect, for OPENing the same file or secondary address will supercede the prior OPENing and you will not be wiped out—the PET disks are considerate about this.

The final blow with Basic 3.0 is that the diskette directories are usually LOADed into the PET and then LISTed to be seen. The price is that your current Basic program is destroyed in the process. (The filename "$0" is a valid one and you can read it as a sequential file with the GET# statement. What you will see is not easily explained without a disk manual nearby, however.)

The "Wedge" or DOS Support program was created to eliminate the rituals of OPEN and PRINT# for most disk operations. When the PET is running the Wedge program and you enter a "wedge" command, the PET's file OPEN and PRINT operations are not performed. Instead, the internal ROM routines which communicate with the IEEE 488 bus are activated directly by the Wedge program. The result is that the PET disks see *exactly the same characters on the IEEE 488 bus* and they respond identically. The Wedge also intercepts incoming characters from the disk and in some cases (like the directory) places them on the screen instead of destroying your Basic program.

If you are using the Wedge, you can still use the old style OPEN, PRINT# and CLOSE commands for the disk if you want to. The PET disks will not know the difference.

Basic 4.0 has incorporated several commands, such as CATALOG and DSAVE which act in a manner very similar to the Wedge program. When a Basic 4.0 disk command is executed, the same character sequences are sent to the PET disks as with the OPEN and PRINT#, and like the Wedge, the file system is kept unaware of most of the Basic 4.0 commands. (DOPEN and DCLOSE are, of course, seen as files by the PET.)

So, the versions of the PET disk, 2020, 4040, Old and New DOS, or versions 1.0, 2.0, and 2.1 all refer to the features found in the disk drives. These have no relation to the versions of PET Basic. The PET disks only see the IEEE 488 bus and any IEEE 488 device could, in theory, use the PET disks.

The PET Basics and the Wedge programs each have different ways for the

user to issue disk commands. However, the actual commands sent to the IEEE 488 bus for a given command will be *identical* regardless of the version of PET Basic used.

Figure 1 shows the relationship between the Basic 4.0 and IEEE (i.e., OPEN & PRINT#) forms of the PET disk commands. Note that some of these do not usually appear in the Commodore manuals. If you are writing Basic programs to work for all PET models, you must use the IEEE 488 file form of the disk commands, i.e., the OPEN and PRINT# rituals.

**Don Ross Rebuts**

In the previous column (Feb. '82) I reviewed some educational programs by Don Ross. Here is his letter in reply.

Dear Mr. Yob:

Your recent comments concerning my math programs never mentioned (good or bad) their educational value, only some minor programming points. A review of my program *Long Division* in *The Computing Teacher,* Vol. 8, No. 2, stated "I think this program should be in every classroom where arithmetic remediation is going on."

I am enclosing a copy of this review. Please note that it was written by an educator.—Don Ross

I do not have space to reprint the other review, but I will send a copy to anyone who is interested.

**IEEE 488 Extension Card**

When I bought my Comprint 912 printer, the interface consisted of a ribbon cable without a connector. I had to get an edge connector and wire it up myself. Later, I got the disks, and along with the disks came the PET to IEEE cable. Unfortunately, my Comprint cable didn't have the standard IEEE connector, so I had to make a choice: printer or disk, but not both. The solution was to build a little card with one female edge connector and two card edges to permit the use of both cables. Figure 2 shows the construction of this extension card.

If you build this widget, be patient and do it carefully. All 24 connections must be brought out and wired. Use the female connector to measure the male card edges to fit precisely.

**Two More Utility ROMs**

In an earlier column (Feb. '81) I mentioned the Disk-O-Pro ROM provided by Skyles Electric Works which upgrades a Basic 3.0 ("new" ROMs) to the Basic 4.0 disk commands and adds a few other features. Several other ROMs have appeared which help you in your struggle with the disk and the PET in general. Each of these has some nice features—and some overlaps. I dream of a 1M ROM which has *all* the nice features I like. . . . Meanwhile, here are two to think about.

**XDOS By Prominico**

The XDOS 2.2 ROM (Prominico, 1921 Burrard St., Vancouver, BC, Canada V6J 3H3. $97.50) provides the Wedge (Dos Support) program in ROM form and a few nice features for helping you select programs for copying and loading from a diskette. The ROM is available at all three ROM addresses, $9000, $A000 and $B000, so you can select the one that fits your empty sockets. Once you start with the appropriate SYS address, XDOS provides the Wedge—so you no longer have to do LOAD"*", 8 and RUN—less 500 or so bytes of memory.

Several "menu" commands read the diskette directory and build a form on the screen with the filenames and the selection letters 0-9 and A-Z. Up to 36 filenames will appear in the form. If you press the space bar, the menu will show the next 36 filenames and so on, returning to the first 36 when all of the files have been displayed.

Pressing the appropriate select key lets you load, copy, or scratch files depending on the type of menu you asked for. MENU is for loading and running programs, and does not list the SEQ or REL files. DMENU only shows the data files. SMENU shows all files, and you can select the files to scratch by pressing their selection letter. RETURN then scratches the files. CMENU assists neatly with the tedium of copying only selected files from one disk to another. (This command is almost worth the price of the chip.)

Several printer utilities complete XDOS. Pressing SHIFT RVS * together will dump the contents of the screen to a Commodore printer. This can be enabled as required. You can also send data to the printer from a direct command by prefacing it with an asterisk, which is handy in debugging work. XDOS also re-initializes the disk after SAVE or SAVE REPLACE which makes life simpler for 2020 disk owners.

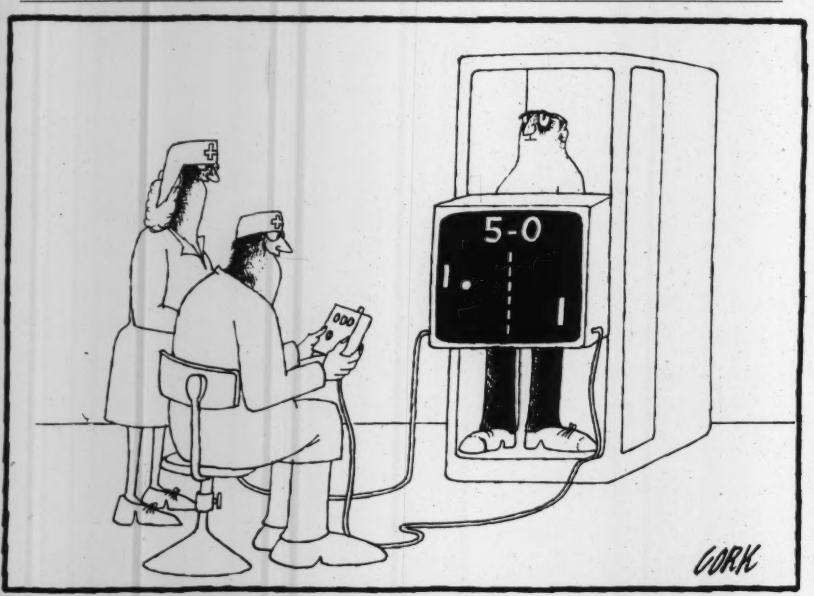
I like XDOS, but feel that its price is a bit high. Prominico also has a ROM for sorting which I haven't had a chance to review.

**The +20 ROM**

The English PET users are an active source of neat things, as any reader of *printout*! (P.O. Box 48, Newbury, England, RG16 0BD. $29 per year) will know. The +20 ROM (Grove House, Holwick St, Alnwick, Northumberland, England) is priced at about $100, and provides 22 commands which assist with many "housekeeping" tasks that must otherwise be tediously programmed in Basic.

Seven of the commands provide the disk directory, initialization, program load, load and run, program merge, and file opening functions. Other commands flash the screen, reverse the color of the screen, scroll up and down, turn the repeat key function on or off, control the STOP key action (on or off) and convert PETASCII to ASCII for your printer.

Also provided are some rather unusual commands. There is a provision to allow the ← symbol to be used for INPUT just as the ? serves for PRINT, a sort for string arrays, and a "screen input" which lets you specify the row and column on the screen to input a given number of characters—useful in "form filling" business applications.



I found most of the +20 commands to work, with the glaring exception of the formatting command (which set its array to all zeroes, wiping out any data that was present), and the commands to enable/disable the stop key (which did nothing). All of the commands were sensitive to spaces; in most cases you can't put a space between a command and its arguments.

All in all, I find that I prefer functions to look at least superficially similar to Basic commands (I have written two major sets of Basic extensions which do exactly that) and learning condensed commands that don't "fit" the Basic style is a bit awkward. Unfortunately, the price is about 1.5K of machine language and ROM space is precious, so the program writer must choose between style and features. If you need the functions provided in these two ROMs, get them, but be sure your needs are real.

**Hex To Decimal Infinitum**

Just as the Eight Queens problem is always found in a recursive language manual (i.e., Forth, Pascal, Sail) our lowly Basic programmers like to do Wumpus (fine with me) and Hex-to-Decimal conversion. Back in the October 1980 column I published this short program by David Harris:

```
10 G=16:A$="0123456789ABCDEF"
20 INPUTH$:FORI=1 TOLEN (H$):
   FOR J=1TOG: IFMID$ (H$,I,1)
   =MID$(A$,J,1) THEN C=C*G+J-1
30 NEXT J, I:PRINTC:C=0:GOTO20
```

John Brereton and Rober Baker changed Line 30 to:

```
30 NEXT:NEXT:PRINTC:RUN
```

which saved 6 bytes. Frank Levinson got it down to 78 bytes:

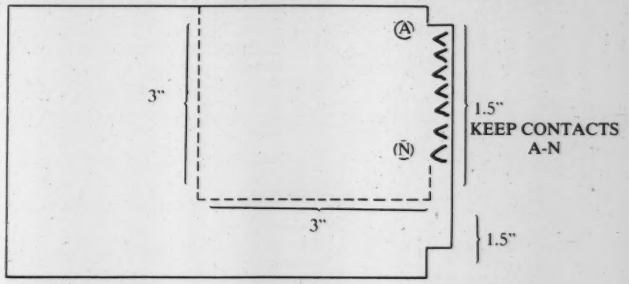
```
10 INPUTH$
20 C=C+ASC(H$)-48+7*(H$ > "9")
30 H$=MID$(H$,2):I FLEN(H$)THEN
   C=C*16:GOTO20
40 PRINTC:RUN
```

Very nice. Now, no more copycatting on three-line programs. Any more Hex/Decimal programs will result in my asking *Creative Computing* to cancel your subscription. Let's see some *new* ideas!

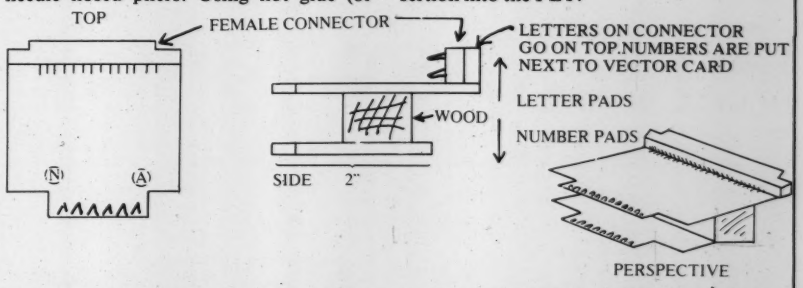
**The Nuclear PET**

Ivan Smith's PET Nuclear Power Plant, which appeared in the August '81 issue of *Creative Computing* is quite a nice program. It is lots of fun to play with, and like many simulations, you can do reasonably well on the third try, but there's always room for improvement in your performance. Ivan has put the program into the public domain. If you want a copy, send me both a tape and SASE.

Take one edge connector which fits on the PET (That's a 12-position 24-contact connector on .156 centers—AMP 530655-3 7932) and two Vector 6" ×4" prototyping cards with 22 positions/44 contacts on the card edge. Using a hacksaw (or tinsnips with great care), cut away the excess card as shown below:



After cutting both Vector cards, remove the six traces PADS P,R,S,13,14 & 15 on the left side of each card by heating them with a soldering iron and pulling away with needle nosed pliers. Using hot glue (or epoxy) and a small block of wood, build the assembly as shown below. Take care to leave enough room on both sides of the wood block to allow for the wiring and insertion into the PET.



Prepare 24 wires with the insulation stripped to 1/4" on one end and 1 1/4" on the other end. I used the solid wire used for telephone work as it is easy to handle; 24 AWG solid core wire will do nicely. Insert the 1 1/4" stripped wires into the holes A-N on the upper card and the remaining wires in the row above to fit with holes 1–12 on the other side of the card. Be sure the wire passes through the corresponding holes in both cards. Once the wires are inserted, use a good quality electronic soldering iron (and much patience) to solder the wires at their corresponding pads on both cards. Take care to avoid short circuits. Then solder the other end of each wire to the corresponding pins on the female connector. Note that the orientation of the cards and the connector is critical to the success of this project. □

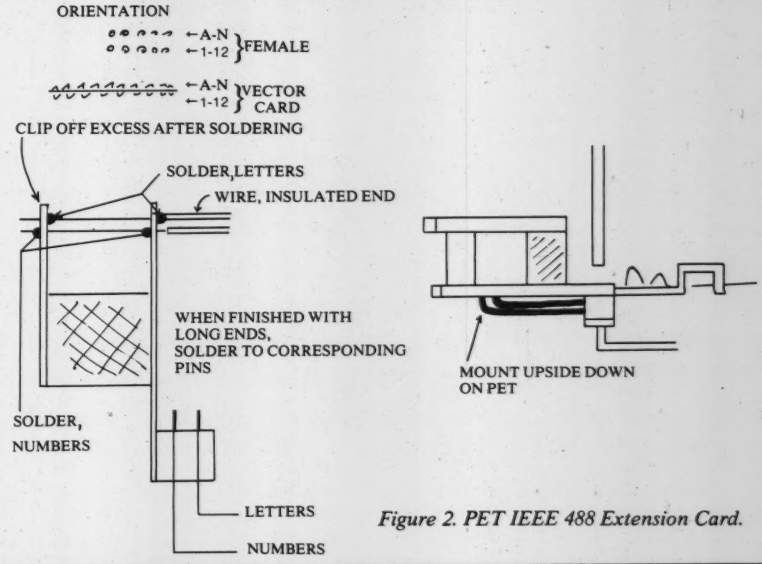


*Figure 2. PET IEEE 488 Extension Card.*

## Three Business Systems

Information Support Systems, Inc. announces Voyager, a desktop microcomputer with a 64K RAM processor. The system comes with a fully integrated Business System and Word Processing Package programmable in Basic and Pascal, with CP/M capabilities.

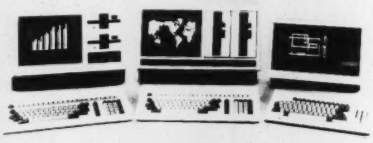
Voyager II is a 2 MB, dual floppy system, and Voyager III is a 6 MB hard disk system. All are priced under $9995.

Information Support Systems, Inc., 2049 Century Park, E, Ste. 2095, Los Angeles, CA 90067. (800) 235-3561, (213) 552-1820.

**CIRCLE 300 ON READER SERVICE CARD**

## Desktop Business Computers

Sanyo Business Systems Corporation has introduced three desktop business computers. All will be supplied with CP/M, Sanyo Basic, Diagnostics and Utilities. All units have business graphics capability, detachable keyboard, number pad, cursor control keys, programmable functions keys



and a green phosphor, high impact, nonglare CRT display screen.

The single 5 1/4" disk drive model FDS-1000 will have the add-on capability of three additional disk drives for a total of 1Mb. The MBC-2000 incorporates two 328K drives and has the additional capability of two more drives for a total of 1.3Mb. The MBC-3000 offers two 1Mb drives with add-ons for a total of 4Mb.

All three machines are supplied standard with 64K of RAM memory. The FDS-1000 is built around a Z-80A microprocessor, and the MBC-2000 and MBC-3000 use the 8085A CPU.

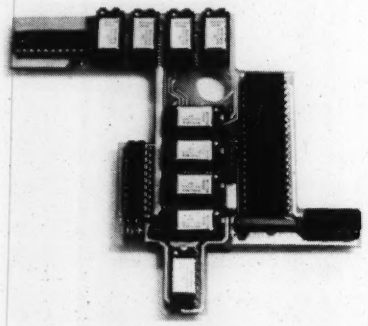
Sanyo Business Systems Corporation, 51 Joseph St., Moonachie, NJ 07074.

**CIRCLE 301 ON READER SERVICE CARD**

## Memory Expansion for Color Computer

Computerware has introduced a board that expands the memory of the Radio Shack Color Computer from 16K to 32K.

The 16 Plus Board does not require soldering, and fits under the RF shield cover inside the computer. Complete installation instructions are included with the board.



Design of the board allows the graphics display to reside anywhere within the 32K of memory. No software modifications are required for existing software. $84.95.

Computerware, Box 668, 1472 Encinitas Blvd., Encinitas, CA 92024. (714)436-3512.

**CIRCLE 302 ON READER SERVICE CARD**

## Memory Expansion Board for IBM PC

A high-capacity memory expansion board has been announced by Datamac Computer Systems. The board will allow IBM Personal Computer users to address directly up to 1MB of memory.

The board can be configured in a variety of sizes: 64K, 128K, 192K and 256K—with parity. Pricing starts at $499.

Datamac Computer Systems, 680 Almanor Ave., Sunnyvale, CA 94086. (408) 735-0323.

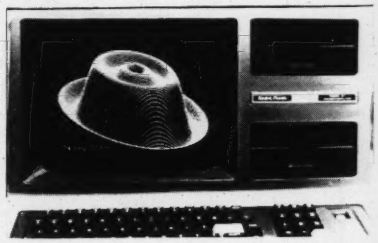
### Hi-Res Graphics for TRS-80



The Grafyx Solution gives any configuration of a TRS-80 Model III computer a resolution of 512 x 192 for a total of 98,304 individually accessible points.

The included graphics package allows the user to set and reset points, lines, rectangles, and complement or clear the screen using Basic commands such as PLOT and LINE. Alternate resolution of 256 x 192, 128 x 192, or 128 x 96 are also possible.

The Grafyx Solution is an add-on circuit board which contains 12,288 bytes of additional read/write memory that does not conflict with the TRS-80 address space. $299.95.

Micro-Labs, Inc., 902 Pinecrest, Richardson, TX 75080. (214) 235-0915.

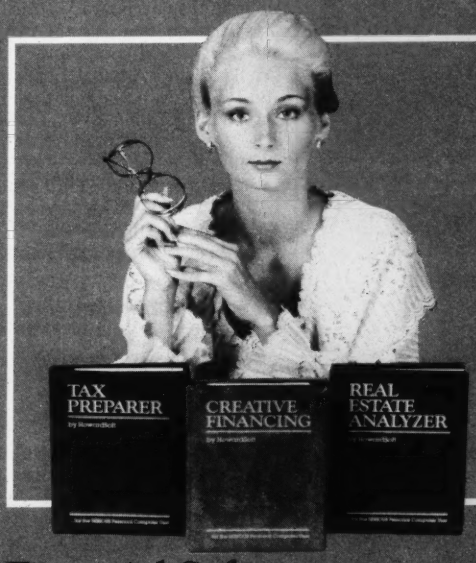
### Add-In Hardware for IBM PC

The Personal Computer Products Division of Tecmar Incorporated has announced a line of add-in and add-on hardware for the IBM Personal Computer.

The following are some of the products



Financial Software
Is Our Only Business
And We Take It Seriously!

**TAX PREPARER** by HowardSoft:
A professional package for year-long record-keeping and year-end tax filing; prepares federal returns for 10 schedules and 11 forms, including income averaging, min and max taxes, depreciation and capital gains, and much more; easy to operate because of self-prompting instructions, automatic posting among forms, and powerful itemizing features; prints in IRS format for direct filing, including printing on preprinted Form 1040; annually updated at a fraction of original cost.

**CREATIVE FINANCING** by HowardSoft:
A flexible package for evaluating real-life loans & investments; provides cash flow & R-O-I projections as well as payment tables and objective decisions; can be used to determine yield to maturity of discounted bonds, present value of annuities stream, buy vs. lease decisions, APR of loans including wraparounds and analyses of all new loan types.

**REAL ESTATE ANALYZER** by HowardSoft:
A tool for objectively comparing alternative investments and projecting future results; professional in both analyses of cash flow & R-O-I and client-oriented report printouts; allows what-if studies for changes in property values, loans, rents, taxes, operating expenses and the value of money; perfect for cash and profit projections on new or old rental property.

**ALL 3 ARE UP-TO-DATE WITH THE LATEST TAX LAWS, INCLUDING ACRS DEPRECIATION AS CREATED BY THE 1981 ECONOMIC RECOVERY ACT**

## Personal Communication Terminal

Axlon Incorporated has announced a portable personal communication terminal for the home and business market.

The Axlon Hotline Personal Communication Terminal can be used to transmit and retrieve information from data bases.

The Hotline measures 1-5/8" x 3-9/16" x 6-3/4" and weighs less than 11 ounces.

The tactile keyboard consists of 43 functional keys arranged in typewriter sequence and provides a 64 upper case ASCII character set. The display is a 16-character fluorescent display which is tilted for easy viewing. The terminal offers a 96-character display memory, which can be scrolled 16 characters at a time, and a 16 character display in memory in the transmit mode.

Axlon Inc. 170 N. Wolfe Rd., Sunnyvale, CA 94086. (408)730-0216.

# 1982 Software Buyers Guide

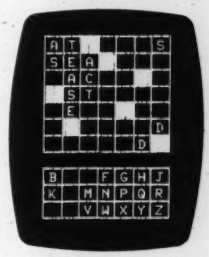
Finding the right software for your needs can be confusing today, with so many different programs on the market from so many different manufacturers.

But now there's *one* place you can go to get the buying information you need:

## Creative Computing *1982 SOFTWARE BUYERS GUIDE!*

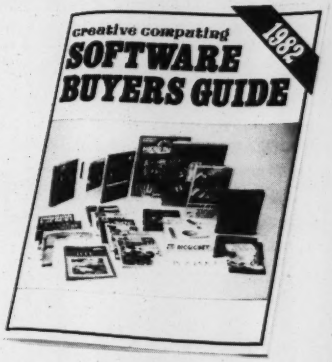
*Creative Computing* puts it all together for you in this new, comprehensive assemblage of product-review reprints from the magazine. It's the one convenient place to look for facts, figures and expert analysis when you're in the market for software!

The SOFTWARE BUYERS GUIDE is easy to use. Programs are listed by category for fast reference. Each evaluation has a "quick reference box" showing system requirements, format, language, price, manufacturer and a brief summary.



## *Under Applications Software you'll find programs for:*

- Business
- Word processing
- Financial and investment analysis
- Education
- Real estate and property management
- Graphic displays
- Music



- Games and recreation—simulations and strategy; fantasy, adventure, action and arcade games; intellectual recreation

## *Areas covered in Systems Software include:*

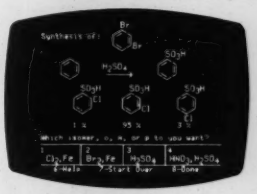
- Operating systems
- Languages and compilers
- Assemblers and disassemblers
- Disk utilities
- Data base management
- Communications
- Software development and programming aids

Each section features a group of in-depth evaluations, with complete background information, a description of the software package, photos and illustrations, *Creative Computing*'s assessment of the package and a reference summary. Covering over 150 programs, the SOFTWARE BUYERS GUIDE gives you the most comprehensive overview of the past year's new systems you'll find anywhere!

## *And there's more!*

The SOFTWARE BUYERS GUIDE also includes a Directory of Manufacturers, cross-referenced to type of computer. We put an end to the frustration of seeing a mention of a software package by "XYZ Software" and not being able to find where to buy it.

## *Save yourself time, trouble and money*



You could spend weeks shopping around computer stores and looking through back issues of *Creative Computing* to dig up the same information we've assembled for you in the SOFTWARE BUYERS GUIDE. And think of the money you could save by getting the right software for your needs the first time around!

Before you consider buying software, get the one convenient source of information that helps you make the right decision—*Creative Computing*'s 1982 SOFTWARE BUYERS GUIDE. Order your copy today!

## *Only $3.95!*

**SOFTWARE BUYERS GUIDE**

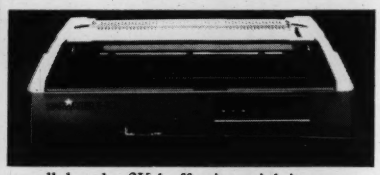
### High Quality Printers

Pro-Writer is a dot matrix printer offering "professional quality printing." It includes 120 cps bidirectional printing, logic seeking and proportional spacing.

Graphics capability is built-in and includes shape and high resolution features.

The Pro-Writer also has a 1K buffer in



parallel and a 3K buffer in serial, increment printing ability, N x 9 dot matrix, and correspondence quality print in eight character sizes. Suggested retail price for the parallel model is $795 and $845 for the serial version.

Also available is the Starwriter F-10, a daisy wheel printer, which includes such features as: low profile design (6" high), industry-standard ribbon cartridges, 40 or 55 cps models, standard parallel or RS-232-C interface (including ETX/AC, X-ON/S-OFF) protocols, built-in word processing functions, plastic or metal wheels, and low noise operation.

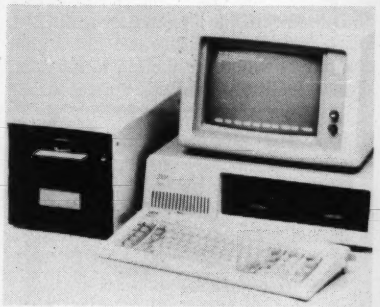
### 5 1/4" Winchester Disk with Backup



Santa Clara Systems, Inc. announces the introduction of MiniMega, a 5 1/4" hard disk with floppy backup, designed to work with most microcomputers.

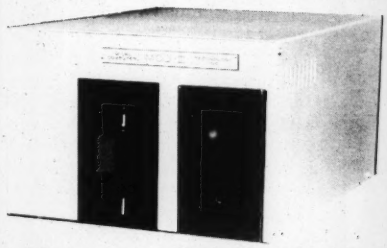
Host adapters enable interfacing to Apple II and III, IBM Personal Computer, TRS-80, NEC PC-8000, all S-100 systems, LSI-11, Multibus, and Motorola 6800. All CP/M programs will work with machines now running CP/M.

The MiniMega is available in 5 or 10 MByte configurations alone, or integrated with a 5 1/4" 1 MByte floppy backup, packaged in a compact cabinet.

Santa Clara Systems, Inc., 560 Division St., Campbell, CA 95008. (408) 374-6972.

**CIRCLE 309 ON READER SERVICE CARD**

### Hard Disk and CP/M for Model III



Microcomputer Technology, Inc., has announed a 5 and 7.5 MB external Winchester hard disk system for use with TRS-80 Model III computer systems.

The system uses the Micro Systems hard disk operating system version 3.3.9 which is file compatible with the TRSDOS.

The 5MB external disk drive is a self-contained unit which includes a Winchester drive, controller, power supply and cables $2799. The Micro Systems DOS plus hard disk operating system sells for $299.

Also available from MTI is the CP/M 80 board kit.

The addition of CP/M version 2.2 along with an 80-character x 24-line display allows any Model III system to run business applications packages such as Wordstar, Datastar, and Mailmerge. $849.

Microcomputer Technology, Inc., 3304 W. MacArthur Blvd., Santa Ana, CA 92704. (414)979-9925.

### Disk Drives for Apple and TRS-80 Model II

A.M. Electronics, Incorporated announces 5 1/4" disk drives for plug-in compatibility with the Apple computer.

The add-on drives, complete with case and cable, are compatible with Apple disk operating systems, and software, and offer 40 tracks of data storage and a 3 millisecond track-to-track access time. $345.

Also available from A. M. Electronics are 8" disk drives compatible with the Radio Shack Model II computer, as well as any other computer requiring high storage disk drives.

The single-headed disk drive is capable of 1 Megabyte of storage (unformatted), while the double-headed drive is capable of 2 Megabytes (unformatted).

The drive is one-half the width of standard 8" disk drives and operated entirely from DC power. Track-to-track access time is 3 milliseconds. $695.

A. M. Electronics, Incorporated, 3366 Washtenaw Ave., Ann Arbor, MI 48104. (313) 973-2312.

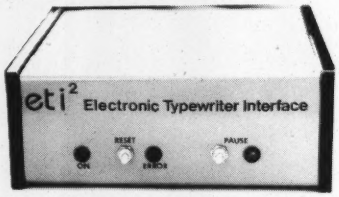
## Electronic Typewriter Interface

Mediamix announces an RS-232C serial version of their ETI² (Electronic Typewriter Intelligent Interface). The RS-232C serial unit provides for RTS or BUSY signals, plus XON/XOFF and STX/ETX communications protocols.

The new unit allows the ETI² to interface an IBM Electronic Typewriter with IBM, DEC, Xerox 820, Osborne-1, and other computers which are limited to RS-232C serial type printers. $595.



The Centronics compatible parallel version of the Mediamix ETI² is suitable for use with most personal computers including the Radio Shack TRS-80, Apple, PET/CBM, Vector, OSI, Altos, Hewlett Packard and IBM Personal Computer. $495. Both versions of the ETI² feature a 2000 character text buffer and a library of over 39 commands.

Mediamix, P.O. Box 67B57, Los Angeles, CA 90067. (213)475-9949.

# iews...book reviews...book

*Stephen Gray*

**Basic Faster and Better and Other Mysteries**, by Lewis Rosenfelder. IJG Inc., 1260 W. Foothill Blvd., Upland, CA 91786. 288 pages, paperback $29.95. 1981.
**Microsoft Basic Decoded and Other Mysteries**, by James Farvour. IJG Inc. 312 pages, paperback $29.95. 1981.

The IJG Basic book is one of the most helpful programming books you'll ever read, if you're really into TRS-80 Basic. This is not a book of "hints and kinks" trivia, or a collection of programs for playing games or balancing your checkbook. The author presents functions and subroutines, most of which he learned the hard way, while developing business programs to sell, and is "the result of the efforts I've made to make Basic programs run better and faster," as he says in the preface.

Each routine and technique "solves one or more specific problems that you are likely to encounter when programming the TRS-80," as the preface continues.

Fifteen chapters look into areas such as Super-Power Function Calls (using DEF FN), USR Routines, Magic Memory Techniques (PEEK, POKE, active variable analyzer), Basic Overlays, Number Crunchers and Munchers, Using Strings in New Ways, Data and Time Manipulation, Bit Manipulation, Arrays, Searches and Sorts, Keyboard and Video Trickery, Data Entry Made Easy, Useful Utilities, Model 2 Modifications, and Faster and Better Disks. Eleven appendixes provide goodies such as USR Routine Pointer Addresses, Disk Buffer Memory Locations, and Disk DCB Addresses, along with the usual decimal-to-hex and graphics-character tables.

This book isn't for everyone; it is heavy reading that goes far beyond the usual collections of programs and routines. But if you write business programs, or just want to know how to write highly efficient Basic programs, get this book. A pair of disks were scheduled to be available in the first quarter of 1982, one containing all the demonstration programs, the other all the library functions, at $19.95 each.

The book on Microsoft Basic is a detailed, annotated guide to the operating system and Basic interpreter in the TRS-80 Level-II ROM, and is a must for all ROMniks.

The first fifth of the book contains six chapters: Introduction, Subroutines, Cassette and Disk, Addresses and Tables, etc. The rest, 150 pages, consists of detailed listings of the ROM memory locations, 62 lines per right-hand page, with over 7,000 comments that often wrap around to the next left-hand page. The 62-line format exactly matches the Apparat disassembler's format; the pages are hole-punched for a three-ring binder, so you can line up the disassembler's output with the comments.

The introduction provides a wealth of information about the ROM and Level-II operation. The subroutine chapter is fascinating, with the entry points of dozens of calls (the more general ones), a brief description of each, and the disassembled listings, with comments.

The IJG books aren't for everyone, but if you want to know what is going on in the TRS-80 ROM, this one is a goldmine, as is the Rosenfelder book for those who want "a guided tour of Basic programming tricks and techniques."

---

**Encyclopedia for the TRS-80**, edited by Kate Comiskey, Chris Crocket, et al. Wayne Green Books, Peterborough, NH. Ten volumes, approximately 280 to 300 pages each. Hardcover, $19.95 each, $164 the set; paperback $10.95 each, $83 the set. 1981-1982.
**Encyclopedia Loader: Programs on cassette from Encyclopedia for the TRS-80**. Vol. 1, $12.95; Vol. 2-10, $14.95 each.

According to the advertisements, this encyclopedia "will never become stale or out of date. That's because the volumes...are being issued one-at-a-time, approximately six weeks apart. This means that each new volume will reflect the latest developments and discoveries.... The first four volumes are being issued during 1981. The remaining volumes will be issued during the first half of 1982."

Each of the first three volumes seen includes articles in nine categories: business, education, games, graphics, hardware, home applications, interface, tutorial, and utility.

Volume 1 includes, among other things, programs to project retail sales and thus determine stock needs, store your inventory of gold and silver and produce a total value and a market analysis, generate an invoice, measure instructional effectiveness, tabulate student ratings, play *Swords and Sorcery* (with a 17-page listing), play *The President Decides*, create graphics four ways, keep track of stocks and bonds, create biorhythms, and

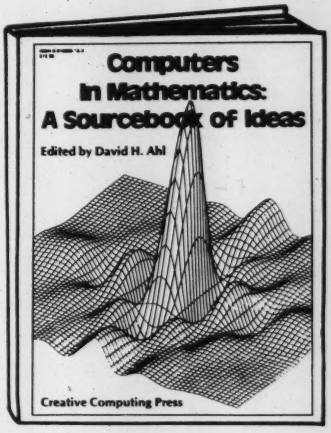
# Sourcebook of Ideas

## Many mathematics ideas can be better illustrated with a computer than with a text book.



Consider Baseball cards. If there are 50 cards in a set, how many packs of bubble gum must be purchased to obtain a complete set of players? Many students will guess over 1 million packs yet on average it's only 329.

The formula to solve this problem is not easy. The computer simulation is. Yet you as a teacher probably don't have time to devise programs to illustrate concepts like this.

Between grades 1 and 12 there are 142 mathematical concepts in which the computer can play an important role. Things like arithmetic practice, X-Y coordinates, proving geometic theorems, probability, compounding and computation of pi by inscribed polygons.

**Endorsed by NCTM**

The National Council of Teachers of Mathematics has strongly endorsed the use of computers in the classroom. Unfortunately most textbooks have not yet responded to this endorsement and do not include programs or computer teaching techniques. You probably don't have the time to develop all these ideas either. What to do?

For the past six years, *Creative Computing* magazine has been running two or three articles per issue written by math teachers. These are classroom proven, tested ideas complete with flowcharts, programs and sample runs.

Teachers have been ordering back issues with those applications for years. However, many of these issues are now sold out or in very short supply.

So we took the most popular 134 articles and applications and reprinted them in a giant 224-page book called *Computers in Mathematics: A Sourcebook of Ideas.*

**Ready-to-use-material**

This book contains pragmatic, ready to use, classroom tested ideas on everything from simply binary counting to advanced techniques like multiple regression analysis and differential equations.

The book includes many activities that don't require a computer. And if you're considering expanding your computer facilities, you'll find a section on how to select a computer complete with an invaluable microcomputer comparison chart.

Another section presents over 250 problems, puzzles, and programming ideas, more than are found in most "problem collection" books.

*Computers in Mathematics: A Sourcebook of Ideas* is edited by David Ahl, one of the pioneers in computer education and the founder of *Creative Computing.*

The book is not cheap. It costs $15.95. However if you were to order just half of the back issues from which articles were drawn, they would cost you over $30.

**Satisfaction Guaranteed**

If you are teaching mathematics in any grade between 1 and 12, we're convinced you'll find this book of tremendous value. If, after receiving it and using it for 30 days you do not agree, you may return it for a full refund plus your return postage.

To order send payment* plus $1.00 postage and handling to Creative Computing, Dept. Z0422, 39 E. Hanover Avenue, Morris Plains, N.J. 07950. Orders may also be charged to your Visa, Mastercard or American Express account — by mail include credit card name, number and expiration date, or if you prefer, use our 24-hour toll-free number, 800-631-8112. In N.J. only 201-540-0445.

CIRCLE 198 ON READER SERVICE CARD

# ...views...book r

create delay loops. Hardware articles show how to read/write on both sides of your floppy disks, protect your cassette relay, operate a radio-controlled model car with a radio link, and calibrate your printer. Tutorials discuss TTY interfaces and introductory TRS-80 programming. The companion *Encyclopedia Loader* cassette includes all but one of the 16 programs in Volume 1.

Volumes 2 and 3 are similar in scope, with programs for a name-and-address file, expense report, *Keno*, curve plotting, word processing, decoding Morse, tutoring algebra, and articles on building a light pen, regulating your video monitor, building a Deluxe Expansion Interface, etc.

As with any encyclopedia, many of the programs, construction articles and tutorials in these pages may seldom if ever be used, but they're all there if and when you need them, all written simply for easy reading. On the other hand, $164 or even $83 may seem like a lot of money to a TRS-80 user who may not find many of the pages immediately relevant (even though they do make for good browsing). It's a safe bet to predict this encyclopedia will be selling, by mid-1983 (if not before), for about two-thirds or even half the advertised prices, which seems about right.

---

**Exploring Computing with the TRS-80 (and common sense) with programming in Basic**, by Richard V. Andree and Josephine P. Andree. Prentice-Hall Inc., Englewood Cliffs, NJ. 240 pages, hardcover $15.95. 1982.

Winner of the Thanatos award for the longest book title, this typewritten book is in two parts. The first 102 pages teach "what you need to know to use your computer in solving real problems," with five lessons on tables, computer-assisted solutions, art and graphics.

Part II is "devoted to special topics you may or may not need to learn about, depending upon your own particular interests. Lessons 6 to 17 may be read in any order, or ignored entirely until needed." These twelve lessons cover tape, games, editing, simulation, variables, error messages, more graphics, strings and logical operators, etc.

# views...book

Although the cover shows a TRS-80 Model III, this is misleading. The book isn't about Model III Basic, or even Microsoft Basic. Page vii says "Most of the instructions used in this book work on all versions of Basic." However, a chart at the back of the book shows which instructions work on which of the "eight most common versions of the TRS-80," including tape and disk, Models I, II and III, Color Computer and Pocket Computer.

The authors teach at the University of Oklahoma, and the book shows a lot of careful preparation, with a slow and steady introduction of Basic, covering all the details and building on previous material.

However, not only is the text typewritten, but all the artwork is done by hand, including the small rectangles around ENTER and the larger CRT-type rectangles around display material. These are not done well, and make the book look like a manuscript. For $15.95, the reader deserves a book that is easier on the eyes, regardless of its merit. Although a typeset text means a shorter publication time, and puts the burden of proofreading upon the authors, this book is not a credit to the Andrees or to Prentice-Hall.

---

**Computer Programs in Basic**, by Paul Friedman. Prentice-Hall Inc., Englewood Cliffs, NJ. 285 pages, hardcover $19.95, paperback $10.95. 1981.

What a surprise to open this book and find not a single program in it. Then you read the small print at the bottom of the dust jacket's cover: "The software resource guide to programs for business/finance-games-mathematics-science/education."

What we have here is a "fully indexed guide to over 1,600 Basic computer programs recently published in easily accessed personal computer magazines," according to the jacket flap, which adds two more "major discipline fields" to the four in the subtitle: personal interest and utility.

Most of the 259 pages consist of listings with the program's name, author, source, brief description, number of lines, the version of Basic used, special hardware and non-Basic software required, and non-ANSI features of the program, if any.

The 8-page introduction tells how to use the book, how to get the programs (subscribe to at least three magazines, check your local computer club, check back-issue ads, buy microfilmed issues), translating other-computer programs for your own machine, and "Pitfalls in Basic."

Appendix A lists four pages of Basic statements and functions. Appendix B gives the names, addresses and some details about the ten periodicals reviewed. A five-page glossary ends the book, although it seems that anybody who would buy such a book wouldn't need the glossary.

An interesting book containing many useful references, this is hardly worth buying in hardcover, since it was out of date long before publication; the most recent program was published in Dec. 1979; the book itself was published April 30, 1981.

---

**Computing in the Humanities**, edited by Peter C. Patton and Renee A. Holoien. Lexington Books, D.C. Heath and Co., Lexington, MA. 413 pages, hardcover $29.95. 1981.

The eleventh in the Lexington Book Series in Computer Science, this is a collection of two dozen papers by professors, lecturers, graduate students and graduates of the University of Minnesota.

CIRCLE 175 ON READER SERVICE CARD

# iews...book r

The book began several years ago with a survey, carried out on a summer research grant, of faculty members in every department of the university's College of Liberal Arts that indicated interest in computing.

The chapters involve the use of computers in four areas: analysis of language and literature (Greek New Testament text, analysis of literary style, concordances of troubadour poetry, etc.), archeology and history (database for Babylonian economic documents, simulation of a Roman wine and oil plantation, CAI in archeology, etc.), humanistic education (computer-based course in ancient Egyptian hieroglyphics, CAI courses in Sumerian and Latin, etc.), and the fine arts (five artists, including Ruth Leavitt).

A few of the papers are on subjects so specialized as to be of interest mainly to colleagues; the majority provide fascinating glimpses into the many uses of computers in liberal arts. For readers who wish to delve further, references and bibliographies are provided.

---

**55 Color Computer Programs For The Home, School and Office**, by Ron Clark. ARCsoft Publishers, Box 132, Woodsboro, MD 21798. 128 pages, paperback $9.95 (shipping $1). 1981.
**101 Color Computer Programming Tips and Tricks**, by Ron Clark. ARCsoft Publishers. 128 pages, paperback $7.95. 1981.
**50 Programs in Basic For The Home, School and Office** for the Pocket Computer, by Jim Cole. ARCsoft Publishers. 96 pages, paperback $9.95. Second edition, 1981.
**101 Pocket Computer Programming Tips and Tricks**, by Jim Cole. ARCsoft Publishers. 128 pages, paperback $7.95. 1981.

These four slim volumes, dedicated to the Radio Shack Color Computer and Pocket Computer, provide dozens of programs a reader may occasionally need, plus a hundred interesting and largely usable short programs.

*55 Color Computer Programs* contains programs in six categories, including: business (invoicing, wages, markup, salesman's commission, bar chart), school (state capitals, hex chart, math flasher, Canadian provinces), teachers (evaluating exam scores, class roll sorter), music (musical scale test, keyboard music player), home (electric-bill analysis, digital stopwatch, draw straws, dice), graphics (kaleidoscope, sketch pad, blinking man). A four-page appendix lists Color Basic functions, statements, operators, video control codes, graphic-character codes, control keys, special characters and error messages.

Some of the business programs are rudimentary, such as *Wages*, which is 18 lines long. However, many are usable in small businesses, either as is, or tailored to the application. The remaining programs (outside of those for teachers) are more for the beginning computerist; many are interesting and informative.

*101 Color Computer Programming Tips and Tricks* is a much more valuable book for the computernik, with six types of programs, such as: graphics (dancing spot, painting exercises, lettering graphics, erasing numbers, how to graph), music (sound with graphics, music test, R2D2 sound effects), text (custom cursor, letter repeater, last name first, bubble sort, search and order), fun and games (digging a tunnel, striped titles, rainbow billboard), number crunching (commas in numbers, stringy numbers, random sampler, VAL), odds and ends (memory peek, character search, seconds timer, IF/THEN/ELSE). There's a great deal of useful information here, all sorts of "hints,

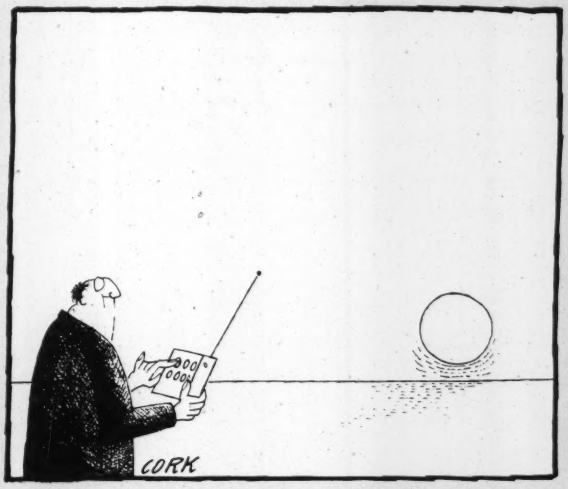
secrets, shortcuts, and color techniques," as the cover puts it. Many of the programs, which range from three to several dozen lines in length, are useful as is, or can be used as subroutines. Many use Basic statements unique to the Color Computer, such as CIRCLE, COLOR, DRAW, PAINT, PLAY, etc., and thus help the user understand them more fully.

*50 Programs in Basic* for the Pocket Computer contains programs of three types, including: business (pocket datebook, making change, advertising cost-per-thousand, plus several similar to those in the Color Computer book), education (slope and distance, dB, metric converter, factors, averages), home (simple and compound interest, mortgage loan, *Klingon Killer*, craps). These 50 programs seem a little more practical than the 55 Color Computer programs, and all can, with minor modifications, be used on any Basic microcomputer.

*101 Pocket Computer Programming Tips and Tricks* is, once again, more likely to be of interest to the bit-hacker than the *50 Programs* book, with seven categories of short programs, including these: fun and games (flashing billboards, one-time password, secret code, controlled beeping), printer (tables, list of names, English strings, spacing numbers), memories (quick load, cleansing variables, dividing variables, comparing strings), random numbers (varying the digits, sneaky seeds, random random), changing numbers (truncating numbers, dump the integer, fractional feet, print mixing), finding numbers (highest and lowest, averages, roots, standard deviation), running (timing loops, GOSUB, label jumps, clean layout).

These 307 programs provide many hours of material for learning more about Basic and the Color and Pocket Computers, and for using either as written or amplified by the reader, or as routines in longer programs. Some are trivial, others are complicated, but none are beyond anyone willing to key them in (no tapes are available) and figure them out (explanations are minimal; REM lines are nonexistent and not often needed anyway).

ARCsoft also publishes a book of *50 More Programs for the Home, School and Office* for the Pocket Computer, at $9.95. All the programs will also run on the Sharp PC-12ll, which is the same machine as the Pocket Computer, but bearing the label of the manufacturer, Sharp Electronics Corporation. □



# WINE CELLAR

Requires 64k Apple with 3.3 Disc

**LOOK at wine**
Examine your cellar by winery, varietal, vintage and/or region.

**DRINK wine**
Remove a bottle to drink and change ratings if desired.

**ADD wine**
Add a new wine to your cellar or change the rating of an old wine.

**DISPLAY statistics**
Gather and display information about your cellar.

**PRINT inventory**
Create a hard copy of your cellar's contents and value.

WINE CELLAR is an inventory program for wine buffs. It allows enthusiasts to manage certain information about their wine and manipulate this information from day to day. Up to 400+ unique wine types can be kept on the program diskette alone with 800 additional types on a second disc. Each type can contain up to 2700 cases in the inventory. Graphics are used to provide information about a wine's availability, rating and drinkability. Wild card searches of the cellar provide snapshots of inventory while any particular entry can be looked at in detail. Statistics of the cellar can be displayed and inventories printed.

| Operates with all Peripherals (Disk, Printer and Modem) | YES | NO | YES | YES |
| Full Screen Editor | YES | YES | NO | NO |
| Microsoft Basic | Standard | N/A | N/A | $ 99.00 |
| Telephone Modem | $109.95 | $399.95 | $450.00 | $154.95 |

*Manufacturer's suggested retail price Jan. 1, 1982. Includes BASIC cartridge required for programming.

Read the chart and see why COMPUTE! Magazine[1] calls the VIC-20 computer "an astounding machine for the price." Why BYTE[2] raves: "...the VIC-20 computer unit is unexcelled as a low-cost consumer computer." Why Popular Mechanics[3] says "...for the price of around $300, it's the only game in town that is more than just a game." And why ON COMPUTING INC.[4] exclaims: "What is inside is an electronic marvel... if it sounds as if I'm in love with my new possession, I am."

The wonder computer of the 1980s. The VIC-20 from Commodore, world's leading manufacturer of a full range of desktop computers. See the VIC-20 at your local Commodore dealer and selected stores.

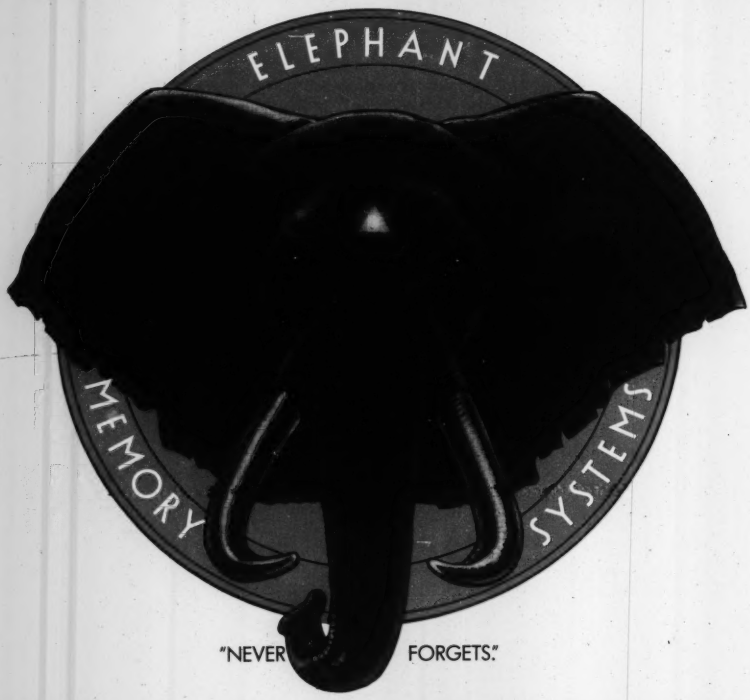
# REMEMBER:



## MORE THAN JUST ANOTHER PRETTY FACE.

Says who? Says ANSI.

Specifically, subcommittee X3B8 of the American National Standards Institute (ANSI) says so. The fact is all Elephant™ floppies meet or exceed the specs required to meet or exceed all their standards.

But just who is "subcommittee X3B8" to issue such pronouncements?

They're a group of people representing a large, well-balanced cross section of disciplines—from academia, government agencies, and the computer industry. People from places like IBM, Hewlett-Packard, 3M, Lawrence Livermore Labs, The U.S. Department of Defense, Honeywell and The Association of Computer Programmers and Analysts. In short, it's a bunch of high-caliber nitpickers whose mission, it seems, in order to make better disks for consumers, is also to make life miserable for everyone in the disk-making business.

How? By gathering together periodically (often, one suspects, under the full moon) to concoct more and more rules to increase the quality of flexible disks. Their most recent rule book runs over 20 single-spaced pages—listing, and insisting upon—hundreds upon hundreds of standards a disk must meet in order to be blessed by ANSI. (And thereby be taken seriously by people who take disks seriously.)

In fact, if you'd like a copy of this formidable document, for free, just let us know and we'll send you one. Because once you know what it takes to make an Elephant for ANSI . . .

We think you'll want us to make some Elephants for you.

## ELEPHANT.™ HEAVY DUTY DISKS.
